

EBS/84/89

CONFIDENTIAL

April 23, 1984

To: Members of the Executive Board  
From: The Secretary  
Subject: International Banking Statistics

The attached paper on international banking statistics is circulated for the information of the Executive Directors.

If Executive Directors have technical or factual questions relating to this paper, they should contact Mr. J. C. O'Connor (ext. (5)7942) or Mr. P. L. Joyce (ext. (5)7946).

Att: (1)

CONFIDENTIAL

INTERNATIONAL MONETARY FUND

International Banking Statistics

Prepared by the Bureau of Statistics with the  
Exchange and Trade Relations Department

Approved by John B. McLenaghan and C. David Finch

April 19, 1984

I. Introduction

The May 1984 issue of IFS will update all world and area measures of international banking activity through end-1983. Advance copies of the IFS international banking statistics are attached for information of Executive Directors, in accordance with established procedures. 1/ On previous occasions, the advance copies were accompanied by an explanation of sources and methods for compiling the IFS data. As the Fund staff is collecting additional information, and gaining experience in interpreting the IFS data, it may now be appropriate to note significant improvements in the Fund's international banking statistics, and provide a brief commentary on various aspects of international banking activity, as part of the advance circulation of the IFS data to Executive Directors, on a quarterly basis.

II. Currency Composition Data

As part of the continuing collaboration between the Fund and the Bank for International Settlements (BIS), the Fund recently received information on the currency composition of the external accounts of deposit banks in BIS reporting countries, cross-classified to provide a limited geographic analysis and a distinction between reporters' accounts with banks and nonbank customers in selected countries or regions. The coverage of the

---

1/ The first results of the Fund's project on international banking statistics were circulated to the Executive Board in International Banking Statistics (EBS/83/238, November 7, 1983). Six new tables on international banking statistics were introduced in the January 1984 issue of IFS. Data on area and world developments, current to end-September 1983, were circulated to the Executive Board in International Banking Statistics (EBS/84/20, January 27, 1984) and subsequently published in the February 1984 issue of IFS.

available currency details is less comprehensive than IFS international banking statistics, and procedures for Fund use of the information are still being developed.

Assessment of international banking developments on the basis of IFS data, alone, is complicated by the fact that changes arise partly from transactions and partly from other factors, notably fluctuations in exchange rates. Estimates of changes due to exchange rate movements can be compiled to the extent that the currency composition of the stock figures is known. Approximate adjustments of the IFS data for exchange rate effects have been attempted for the first time; the tentative results are given below, in the commentary.

### III. Developments in International Banking Activity during 1983

While the banking statistics published in IFS since the beginning of 1984 cover all country groups, widespread attention in the international financial community has focused on the indebtedness of developing countries, and particularly of non-oil developing countries. The available data, while preliminary in some respects, 1/ indicate the broad trends in bank lending to, and deposit taking from, non-oil developing countries during 1983.

Identified international bank credit to nonbanks in non-oil developing countries, other than major offshore banking centers, 2/ rose by some US\$19 billion during 1983, after tentative adjustment to remove effects of fluctuations in exchange rates. 3/ This compares with an estimated increase

---

1/ This commentary is based on aggregated international banking statistics that have been received by the Fund through end-1983 for most countries and on detailed geographic analyses of deposit banks' external accounts that are now available through end-1983 from 20 of the 21 reporting international banking centers.

2/ The excluded major offshore banking centers are the Bahamas, Bahrain, the Cayman Islands, Hong Kong, the Netherlands Antilles, Panama, and Singapore. The analytic advantages of considering the major offshore banking centers and other non-oil developing countries separately are associated with the conceptual and statistical problems in tracing the flow of bank lending through these centers.

3/ The US dollar strengthened against other major currencies during 1982 and 1983. To the extent, therefore, that changes in stocks are used to compute flows of international bank lending, such changes would be adjusted upwards to the extent that lending has taken place in currencies other than the U.S. dollar. The adjustment that has been made compensates in an approximate manner for movements in exchange rates, but does not attempt to compensate for other factors, noted at the end of the commentary, that tend to understate the flow of bank lending computed from changes in stocks.

of some US\$25 billion during 1982. In addition, cross-border interbank liabilities of banks in non-oil developing countries, other than major offshore banking centers, probably rose by some US\$5 billion in 1983, after exchange rate adjustment, compared with an adjusted figure of some US\$18 billion in 1982. Thus, it appears that the exchange rate adjusted increase in international bank claims on non-oil developing countries, other than major offshore banking centers, may have been as much as US\$24 billion (or close to 6 percent) during 1983, which was considerably below the US\$43 billion estimated for 1982.

While the preceding estimates are thought to be fairly robust relative to the moderate variations in the currency structure of international banking statistics, recasting the BIS currency details to fit the Fund's statistical framework has raised methodological issues that have not yet been resolved and may be of analytic significance. In light of these present uncertainties about estimates of exchange rate adjustments, additional comments may be useful on trends in the unadjusted data.

Before exchange rate adjustment, the increase in the US dollar value of international bank credit to nonbanks in non-oil developing countries (other than major offshore banking centers) 1/ amounted to about US\$13 billion in 1983, compared with US\$21 billion in 1982; the 1983 increase in cross-border interbank liabilities of banks in those countries was of the order of \$2 billion (compared with US\$16 billion in 1982). 2/ Thus total liabilities increased by about \$15 billion in 1983, after an increase of some \$37 billion in 1982.

The IFS data also indicate a significant build-up of assets placed with the international banking system by non-oil developing countries. In unadjusted terms, deposits of nonbanks in non-oil developing countries

---

1/ There was less than US\$1 billion of recorded international bank borrowing by nonbank residents of the excluded offshore banking centers in 1983. The cross-border interbank liabilities of banks in those centers, however, rose by over US\$7 billion (unadjusted).

2/ Thus, the effect of exchange rate adjustment is to dampen, somewhat, the marked slowdown in the increase in stocks that occurred between 1982 and 1983. In 1983, the 19 1/2 percent depreciation of the French franc against the US dollar was responsible for much of the exchange rate adjustment affecting the change in the stock of bank lending to nonbanks in non-oil developing countries; the 12 3/4 percent depreciation of the deutsche mark against the US dollar contributed more to the adjustment estimated in respect of the changes in cross-border interbank liabilities.

(other than major offshore banking centers) with international banks <sup>1/</sup> increased by some US\$13 billion with international banks in 1983, compared with US\$9 billion in 1982; in addition, cross-border interbank claims of banks in non-oil developing countries increased by less than US\$1 billion during 1982, but by some US\$5 billion during 1983. <sup>2/</sup>

Regional differences, within the non-oil developing countries, are also apparent. Nearly two-thirds of the unadjusted increase in the stock of liabilities of nonbanks in non-oil developing countries (other than major offshore centers) during 1983 was accounted for by countries in the Western Hemisphere; by contrast, only little over one-third of the build-up of assets by nonbanks in the same group of non-oil developing countries was attributable to nonbanks in the Western Hemisphere, and over half of the build-up of assets occurred among nonbanks in Asian countries. Similarly, banks in Western Hemisphere countries more than accounted for the (unadjusted) increase in liabilities of banks in non-oil developing countries to the interbank market, whilst banks in Asian countries contributed most of the build-up of assets in that market by banks in non-oil developing countries.

The importance of adjusting the data for exchange rate effects has been recognized for some time, and, as noted above, steps are being taken to enhance such adjustments in the Fund's analysis of international banking activity. However, there are other reasons why the calculations based on changes in the stock data may provide a distorted picture of international banking flows, particularly under current conditions. The technical factors involved are inherently difficult to quantify, but may have led to some understatement of the actual lending flows, discussed in the preceding commentary. Two factors, in particular, may affect the 1983 figures. First, the transfer of claims from banks to official creditors, such as export credit guarantee agencies, would tend to reduce the IFS measure of international bank credit to nonbanks. Second, it is not known to what extent creditor banks report arrears on interest payments as increases in their exposure; to the extent that arrears are not included, flows defined in accordance with the Fund's Balance of Payments Manual would be understated.

---

<sup>1/</sup> Deposits of nonbank residents of the excluded offshore banking centers increased by over US\$3 billion (unadjusted) during 1983; the rise in the recorded cross-border interbank assets of banks in those centers was over US\$21 billion, or considerably more than their cross-border interbank liabilities. The data base does not yet permit a further analysis of these movements.

<sup>2/</sup> It has not yet been possible to adjust, for exchange rate effects, the build-up of claims on nonresident banks by residents of non-oil developing countries.
