1/ All data refer to period averages. Countries with changes in real effective exchange rates that exceed 20 percent between the average level for 1978 and that for June 1984 are flagged by one check mark. Countries with changes that exceed 30 percent are flagged by two check marks.

Letters in parentheses next to country names refer to qualifications of the data used as follows: (a) price index significantly affected by price controls; (b) price index has limited coverage in terms of commodities or geographical area; (c) price index based on out-of-date consumer basket; and (d) price index believed to underestimate the actual rate of inflation.

2/ N refers to the nominal effective exchange rate and R to the real effective exchange rate. The notations, I, II, and III indicate whether the first, second, and third index is used.
