

EBD/07/86

July 17, 2007

To: Members of the Executive Board

From: The Secretary

Subject: **Background Material on World Economic and Market Developments/  
Financial Markets Update**

The attached package of charts and tables is intended to serve as background material for the discussion on World Economic and Market Developments and Financial Markets Update, scheduled for **Wednesday, July 18, 2007**. A brief list of issues on which Executive Directors may wish to comment is included at the front of the package. Tables and charts appear on pages 5–60.

It is not intended that this paper will be published on the Fund's external website.

Questions may be referred to Mr. Srinivasan (ext. 34589) and Mr. Faruqee (ext. 37332) in RES.

This document will shortly be posted on the extranet, a secure website for Executive Directors and member country authorities.

Department Heads

## **Issues for Comment**

The global economy expanded briskly during the first half of 2007. World growth is now projected at 5.2 percent for 2007, an upward revision of about one-quarter of a percentage point from the April 2007 WEO. The *United States* has continued to feel the effects of a still weak housing market, although other sectors showed signs of renewed strength in the second quarter. The business expansions in the *euro area* and *Japan* have remained robust and are increasingly extending to household consumption, supported by solid employment growth. Moreover, most *emerging market economies* continue to grow at a rapid pace, driven by strong export earnings and often boosted by large capital inflows. Substantial upward revisions have been made to the growth forecasts for *China*, *India*, and *Russia*.

Average oil prices increased during the first half of 2007, reflecting strong demand and geopolitical uncertainties in an environment of limited spare capacity. Gasoline prices increased even more, owing to bottlenecks in refining capacity, while food prices have also risen. As a consequence, headline inflation rose in many countries, even though inflation expectations generally continue to be well-anchored and core inflation has remained stable. As global capacity constraints become more binding, however, underlying inflationary pressures could intensify.

Expectations of higher growth pushed up long-term yields in June, while volatility was boosted, from low levels, by corrections in various credit markets. The correction has been most severe in the U.S. subprime mortgage and related derivatives markets, owing to a previous relaxation of credit standards. There have also been similar concerns about credit quality in other markets, notably the leveraged loan market that finances mushrooming LBO activity. Elsewhere there appears to have been only a limited impact on risk appetite, with modest corrections in equity and emerging market bonds markets. There is also little evidence of an unwinding of carry trades.

Directors may want to consider the following questions for discussion.

1. Do Directors agree that the global expansion remains strong? Where do they see the balance of risks? Do rising long-term yields pose a risk to global growth prospects? How do they assess the prospects for a turnaround in the U.S. economy given the still weak housing market? Will the euro area and Japan continue to grow above trend?
2. How do Directors view the outlook for emerging markets? To what extent are rising capital inflows and rapid credit growth contributing to vulnerabilities in some countries, and how should policy respond?
3. How do Directors assess global inflation risks in light of recent increases in food and fuel prices? Do they agree with staff's view that further commodity price spikes remain a risk?
4. Are Directors concerned about an excessive relaxation of credit standards? Are recent corrections in credit markets a cause for concern, or are they a healthy warning against market complacency? Do asset prices appropriately reflect current risks, or is there insufficient discrimination across asset classes?
