

FOR
AGENDA

SM/08/145
Supplement 1

May 9, 2008

To: Members of the Executive Board
From: The Acting Secretary
Subject: **Offshore Financial Centers—A Report on the Assessment Program and
Proposal for Integration with the Financial Sector Assessment
Program—Supplementary Information**

The attached document provides supplementary information for the report on the offshore financial centers assessment program and proposal for its integration with the Financial Sector Assessment Program (SM/08/145, 5/9/08), which is tentatively scheduled for discussion on **Friday, May 30, 2008**.

The staff proposes the publication of this paper after the Executive Board completes its discussion together with a PIN summarizing the Executive Board's discussion.

Questions may be referred to Ms. Zephrin (ext. 38680) and Mr. Darbar (ext. 34252) in MCM.

This document will shortly be posted on the extranet, a secure website for Executive Directors and member country authorities.

INFORMATION FRAMEWORK INITIATIVE

1. **The information dissemination and monitoring framework initiative was undertaken to (i) help improve the transparency of activities in offshore and international financial centers and (ii) provide the Fund with data to monitor developments in financial centers.** At the 2003 review of the offshore financial center (OFC) program, in response to a request by jurisdictions initially made at the first Roundtable in 2003, Directors recommended that staff work with jurisdictions in their dissemination efforts. A data template (covering, *inter alia*, aggregate data on banking, insurance and securities),¹ was developed in consultation with the centers and 46 jurisdictions were invited to participate at end-2004. Participation has increased from 16 jurisdictions, when last reported in the February 2006 progress report,² to 28 jurisdictions (see Table 1).
2. **This supplement reviews the data received thus far and the progress made by participating jurisdictions in their dissemination efforts.** Data for major jurisdictions that declined to participate are also provided where it is available from published sources. In addition, data on a sample of advanced economies are provided for comparative purposes. The framework identified a minimum set of variables for dissemination and recommended that jurisdictions publish data on those variables although jurisdictions could choose to publish more. Tables 2 and 5 to 13 provide the data received on those variables. The framework also identified additional variables that were to be provided to the Fund to help Fund staff monitor developments in financial centers.³

A. Monitoring

Banking

3. **The banking sector varies widely in size and scope across the jurisdictions considered as part of the OFC program.** Some centers are major players in the global market, many are minor players, and some are important within their region. Twenty-seven jurisdictions have provided data on total assets of the banking sector (Table 2; Figure 1). As anticipated, in most of the jurisdictions a high proportion of assets are cross-border assets. This reflects the core activity in these centers (Figure 1).

¹ See *Information Framework Financial Activities in International and Offshore Financial Centers* at <http://www.imf.org/external/np/pp/eng/2005/022505a.pdf>.

² *Offshore Financial Centers—The Assessment Program—A Progress Report* available at <http://www.imf.org/external/np/pp/eng/2006/020806.pdf>.

³ See *Information Framework Financial Activities in International and Offshore Financial Centers* at <http://www.imf.org/external/np/pp/eng/2005/022505a.pdf>.

4. **In general, offshore banks deal mostly with other banks.** Tables 3–6 show the proportion and value of external nonbank assets and liabilities in OFCs. Most banks deal with banks on both sides of their balance sheets, with only a few having a relatively large exposure to the nonbank sector. Generally, centers have less than 30 percent of their external assets placed with nonbanks and only three centers have as much as 50 percent of their external assets placed with nonbanks. External nonbank liabilities range from 30 to 90 percent of total external liabilities.

5. **There is a pronounced regional bias in the direction of funds to and from these centers.** As shown in Figure 2, the European offshore centers gather funds from the rest of Europe and channel them to institutions in Europe. Similar patterns emerge in Asian and Western Hemisphere centers. OFCs do most of their business with the major markets in their regions (U.K. for Europe, Japan for Asia, and the U.S. for Western Hemisphere). Major financial markets account for a significant share of the claims and liabilities of offshore banks located in their respective regions.

6. **For many offshore banks the provision of investment or fiduciary services are an important activity.** Banks provide a range of services related to wealth or asset management. In some cases fiduciary deposits include those from parent banks. Eighteen participants reported data on fees and commission as a percent of gross income. The average was 23 percent with the highest being 56 percent. Twelve jurisdictions reported data on assets under management. For three of these jurisdictions, such assets were larger than their on-balance sheet assets.

Insurance

7. **The insurance industry reflects almost as wide a range in size of activity as the banking sector, with one exception.** Bermuda, one of the largest centers for reinsurance business in the world, accounts for the bulk of insurance business conducted in OFCs. While some other centers also play a significant role in the global market, several small centers have only limited activity and a small volume of business relative to the major players (Figure 3; Tables 7–10).

8. **Captives⁴ and reinsurance companies dominate the insurance business in OFCs.** The growth in captives and reinsurance was in part facilitated by the regulatory and legal framework put in place by the centers. Indeed, captive insurance was initially established as a significant business activity in offshore jurisdictions. Reinsurance companies based in OFCs (primarily in Bermuda) share many of the characteristics of those in onshore jurisdictions. However, there is one key difference—catastrophe reinsurance is the dominant line of business. Onshore companies seem to have a more diversified business mix, and a more balanced mixture of long and short-term liabilities. Catastrophe insurers hold relatively large

⁴ Defined by the IAIS (Glossary of Terms, February 2005) as “an insurance company established by a parent firm for the purpose of insuring the exposures of the parent or its affiliates”.

amounts of capital to meet sudden large outflows of cash. One of the advantages of OFCs in this area appears to be the speed with which they can authorize the deployment of new capital in additional insurance capacity (new companies). Bermuda illustrates that, as in banking, geography is important—the reinsurance business was launched there in response to a shortage of US liability insurance in the mid-1980s, and at end-2005, three quarters of captives' gross premiums were sourced from North American companies, indicating that most captives were established by North American companies.

Collective Investment Schemes (CIS)

9. **The data show that the number and value of funds based in OFCs are significant** (Figure 3; Tables 11–12). Collective investment schemes, both public (mutual funds) and private (hedge funds) are offered mostly by the more advanced OFCs. The OFCs provide a number of supporting services to the fund industry. These include firms that provide directors, trustees, or general partners; fund administrators; audit functions; registered office service providers; and investment managers. In many cases a fund may draw upon one type of service from one jurisdiction and another service from another jurisdiction.

Other data

10. **The financial sector plays an important role in many of the economies.** Sixteen jurisdictions provided data on their financial sector's contribution to GDP (Figure 4; Table 13). The ratio of value-added to GDP ranges from 6 to 60 percent, with a majority of ratios being in double digits. Nineteen jurisdictions reported some data on employment and for some the financial sector is a significant employer.

B. Transparency

11. **It is difficult to gauge the degree to which transparency amongst OFCs has improved.** While many of the advanced jurisdictions publish a great deal of statistical information, including on their websites, the smaller jurisdictions need to do much more. A brief survey was conducted of the participating jurisdictions to help judge the progress in transparency in the last three years. Jurisdictions were asked to indicate the data disseminated as a result of the information framework initiative. Thus far, only 11 jurisdictions have responded to the survey; preliminary results are summarized as follows:⁵

- Of the 11, six already publish data on most of the **banking** sector variables. Four of the remaining started disseminating additional data on the banking sector in response to the information framework initiative, particularly on external assets and liabilities, and one indicated that it currently does not disseminate data on these variables.

⁵ The following jurisdictions responded to the survey: Aruba, British Virgin Islands, Cyprus, Gibraltar, Guernsey, Isle of Man, Macau SAR, Monaco, Montserrat, Panama, and Singapore. One jurisdiction excluded responses on CIS and another provided no response regarding non-sectoral variables.

- Eight of the ten with an **insurance** sector⁶ were already publishing relevant data on the insurance sector and one jurisdiction made a small improvement in response to the initiative by disseminating additional data.
- Seven of the nine with **CIS** activity⁷ already publish data on the number of funds registered, and data on the value of the funds (i.e., either total or net assets) are published by six of these. One jurisdiction started to disseminate data on net asset value following the initiative. Five of the nine jurisdictions are publishing the number of funds managed in the jurisdictions with four also publishing the net value of assets. Following the initiative one jurisdiction started publishing both the total and net value of assets managed in the jurisdiction.
- Seven jurisdictions indicated that they already publish most of the data on the other variables. Of the remaining four jurisdictions, three do not publish data on these variables and the other did not respond regarding these variables.

C. Data Issues

12. Even among the jurisdictions that have made an effort to participate in the initiative, data gaps remain, particularly for smaller low income jurisdictions. All but one center among the participants provided some banking data. However, aggregate data on cross-border assets, specifically broken down by bank and non-bank exposures, were not provided by about one third of the jurisdictions that submitted banking data. In addition, three jurisdictions with assets above the threshold did not provide the breakdown vis-à-vis partner countries for cross-border assets and liabilities.⁸ On the positive side, following this initiative, Macau SAR is now reporting locational banking statistics (including partner country data on cross border assets and liabilities) to the BIS. Also, as part of this exercise, Gibraltar and Mauritius are providing the Fund with partner country data on banks' cross border assets and liabilities.

13. Data submission on banking sector variables requested for monitoring purposes has been mixed. About 60 percent of participants have provided some off-balance sheet data. Eight jurisdictions have provided limited data on derivatives; 18 have provided data on fees and commissions; and 12 jurisdictions provided data on assets under management. The information framework requested data on core financial soundness indicators (FSIs) on

⁶ Insurance companies (as opposed to agents) are active in ten of the 11 respondents.

⁷ Nine of the respondents indicated that there is CIS activity in their jurisdictions. One jurisdiction indicated that there was no CIS activity and the other excluded responses on CIS.

⁸ The Information Framework had indicated that jurisdictions with banking activity levels below the threshold of \$5 billion could choose to provide a limited set of indicators (see <http://www.imf.org/external/np/pp/eng/2005/022505a.pdf>).

an optional basis. Eighteen of the 27 jurisdictions who provided banking sector data provided data on FSIs.⁹

14. Data gaps on insurance sector and CIS are somewhat greater than in the banking sector. In part this could be because many small jurisdictions do not offer offshore insurance services and/or CIS, but did not report this explicitly. Twenty jurisdictions provided data on gross premiums in the insurance sector, while 13 jurisdictions provided data on net asset value of CIS. In addition, 10 jurisdictions provided separate data on assets of private CIS (hedge funds) and public CIS (mutual funds). Following the implementation of this initiative, the Cayman Islands has initiated measures to collect and compile data on CIS.

D. Next Steps

15. Consistent with the recommendations in the main paper, the Information Framework Initiative would continue with the integration of the OFC program with the Financial Sector Assessment Program (FSAP). The initiative would focus, in particular, on jurisdictions that do not receive Article IV consultations. Of these, only one jurisdiction active in offshore business (Turks and Caicos Islands) is yet to commit to participate (Table 1).¹⁰ Staff will follow-up with jurisdictions to improve the coverage of data being submitted and to encourage jurisdictions to improve data collection and dissemination.

⁹ Only two of these jurisdictions also participated in the wider Coordinated Compilation Exercise for FSIs.

¹⁰ The other two which do not receive Article IV consultations and which have either declined or not committed to participate, Niue and Nauru, no longer have offshore financial business.

Table 1. Status of Participation in the Information Framework Initiative

Figure 1. Banking Sector (end-2006)^{1/}

1.a. Size of the Banking Sector in Participating Jurisdictions and Select Financial Centers (log. scale) 2/

1.b. External Assets as a Share of Total Assets in Participating Jurisdictions and Select Financial Centers 3/

Sources: Information Framework; Bank for International Settlements; and Eastern Caribbean Central Bank.

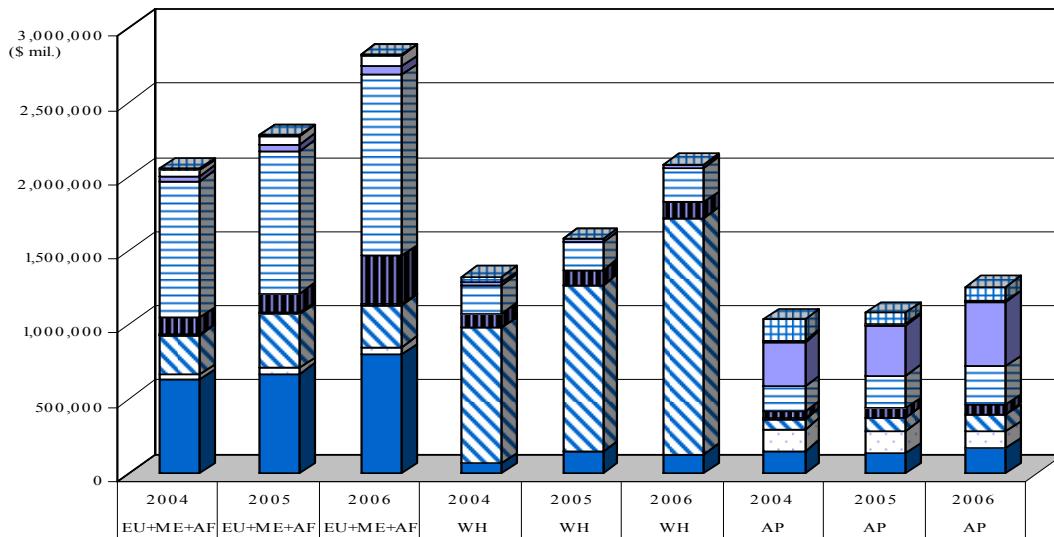

1/ 2006 or latest available. Data on non-participating jurisdictions were obtained from public sources.

2/ The data have been plotted on a logarithmic scale because of the wide dispersion in asset size among jurisdictions.

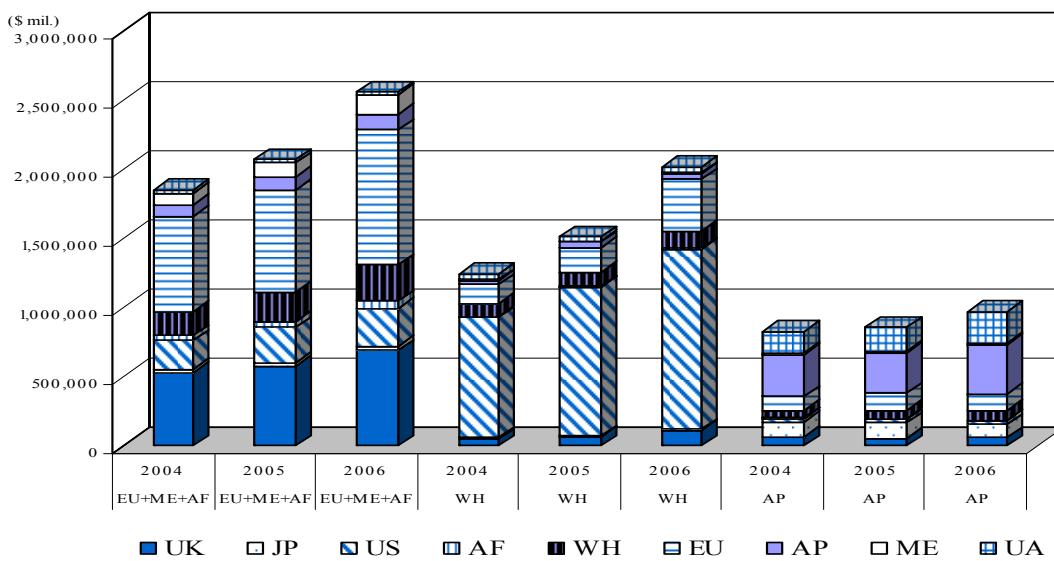

3/ Data on bank assets for Samoa and Gibraltar cover off-shore sector only, and therefore the ratio is not reported.

Figure 2. Geographical Distribution of Banks' Cross-Border Assets and Liabilities (2004-2006)^{1/}

2.a. Geographical Distribution of Banks' Cross-Border Assets of Participating Jurisdictions

2.b. Geographical Distribution of Banks' Cross-Border Liabilities of Participating Jurisdictions

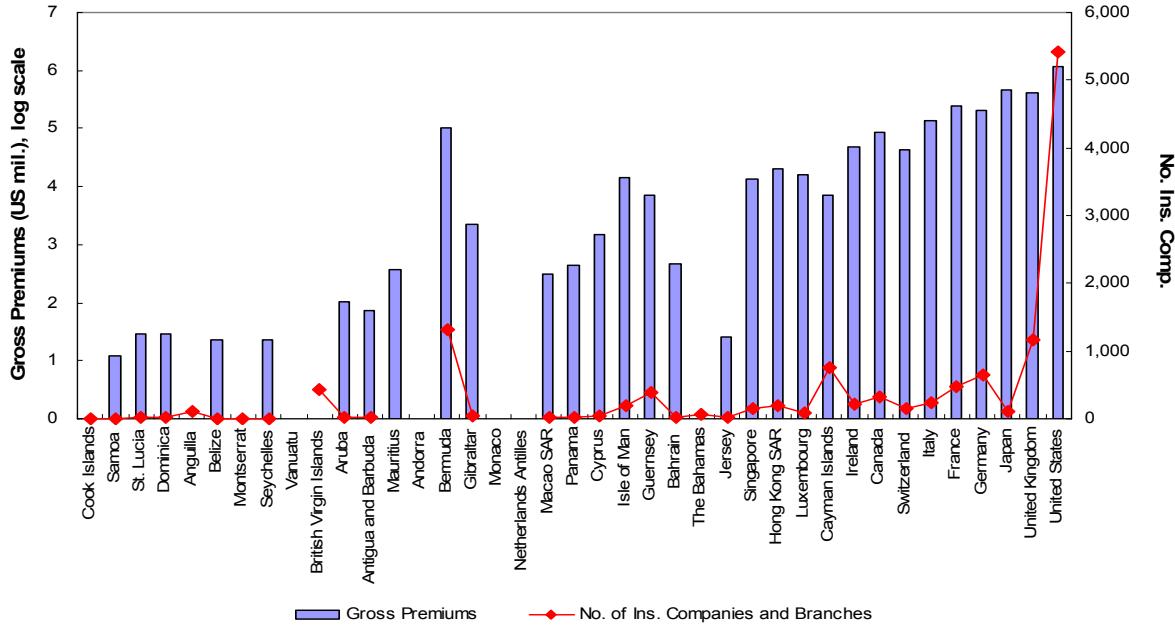

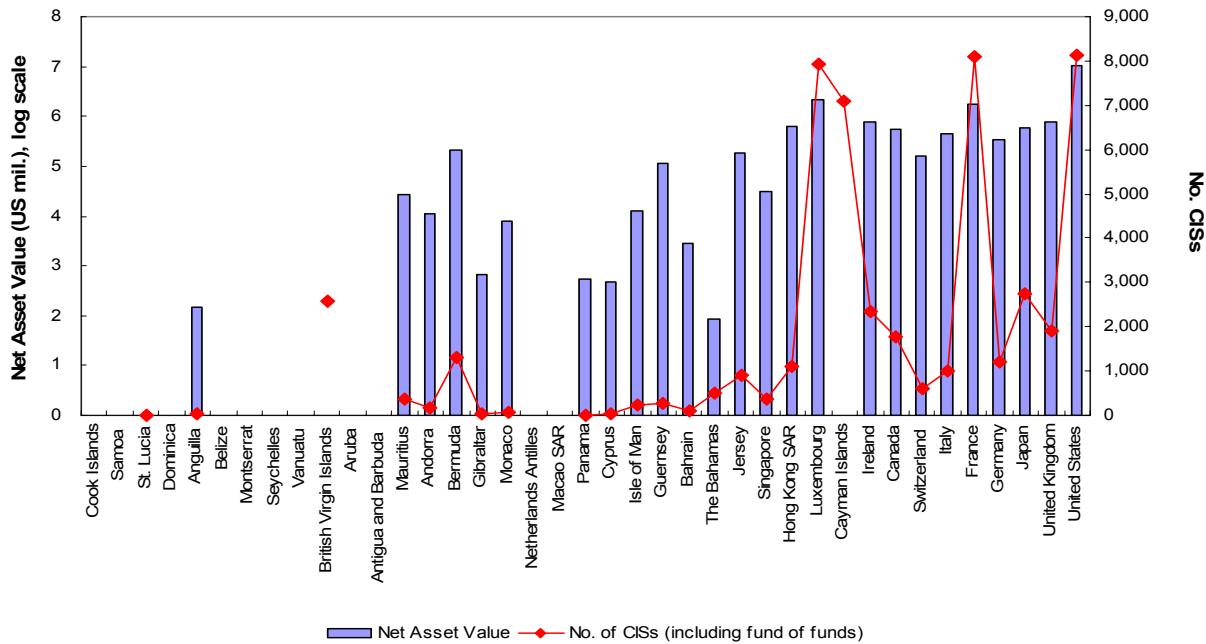

Sources: Bank for International Settlements; and Information Framework.

1/ The reporting jurisdictions are: The Bahamas, Bahrain, Bermuda, Cayman Islands, Gibraltar, Guernsey, Hong Kong SAR, Ireland, Isle of Man, Jersey, Macao SAR, Mauritius, Netherlands Antilles, Panama, Singapore, and Switzerland. They have been grouped regionally as follows: Europe, Middle East and Africa (EU+ME+AF); Western Hemisphere (WH); and Asia/Pacific (AP). The cross-border assets/liabilities are reported vis-a-vis the following countries/regions: United Kingdom (UK); Japan (JP); United States (US); Africa (AF); Western Hemisphere (ME); Europe (EU); Asia/Pacific (AP); Middle East (ME); and unallocated (UA).
