

**FOR
AGENDA**

EBS/11/61

CONFIDENTIAL

April 25, 2011

To: Members of the Executive Board

From: The Secretary

Subject: **Colombia—Arrangement Under the Flexible Credit Line and
Cancellation of the Current Arrangement**

Attached for consideration by the Executive Directors is a paper on the arrangement under the Flexible Credit Line and cancellation of the current arrangement for Colombia, which is tentatively scheduled for discussion on **Friday, May 6, 2011**. A draft decision appears on page 20. The authorities of Colombia have indicated that they consent to the Fund's publication of this paper. Any requests for modifications for publication are expected to be received two days before the Board concludes its consideration.

Questions may be referred to Mr. Faircloth (ext. 37469) and Ms. Garcia-Escribano (ext. 37573) in WHD.

Unless the Documents Section (ext. 36760) is otherwise notified, the document will be transmitted, in accordance with the procedures approved by the Executive Board and with the appropriate deletions, to the WTO Secretariat on Tuesday, May 3, 2011; and to the European Investment Bank, and the Inter-American Development Bank, following its consideration by the Executive Board.

This document will shortly be posted on the extranet, a secure website for Executive Directors and member country authorities.

**Arrangement Under the Flexible Credit Line and
Cancellation of the Current Arrangement**

Prepared by the Western Hemisphere Department
(In consultation with other departments)

Approved by Miguel A. Savastano and Tamim Bayoumi

April 22, 2011

Executive Summary

- **Background.** Colombia's very sound policies, underpinned by strong fiscal and monetary policy frameworks, have contributed to a solid macroeconomic performance and a reduction in vulnerabilities in recent years. Colombia was not impacted severely by the global crisis, largely owing to the implementation of prudent countercyclical policies and secured protection against extended downside risks through FCL arrangements approved in 2009 and 2010. An economic recovery is underway, inflation pressures are contained, and the financial system remains on sound footing. International reserves are strong, and the sovereign debt rating was recently raised to investment grade by one of the rating agencies.
- **Outlook.** The 2011 outlook is generally positive, with real GDP growth projected at about 4½ percent and end-year inflation within the 2–4 percent official target range. Macroeconomic policies are moving toward a more neutral position as the output gap is closing. Medium-term fiscal consolidation is a key objective of the new government, and efforts in this regard should be bolstered by a fiscal rule, presently being discussed in Congress, that would limit the structural deficit of the central government to 2 percent of GDP by 2015.
- **Risks.** Despite its very strong fundamentals, Colombia's near-term outlook could be adversely affected if commodity prices fall, the global recovery falters, or external financing conditions deteriorate.
- **FCL arrangement.** A new 2-year FCL arrangement for 500 percent of quota—which the authorities intend to treat as precautionary—would provide Colombia with reasonable cover in an adverse external scenario. Staff assesses that Colombia meets the qualification criteria for access to Fund resources under the Flexible Credit Line arrangement specified under Board decisions on such arrangements, and recommends its approval by the Board.
- **Fund liquidity.** The impact of the proposed commitment of SDR 3.87 billion on the Fund's finances and liquidity position would be manageable.
- **Process.** An informal meeting was held on April 7, 2011 to consult with the Executive Board on a possible FCL arrangement for Colombia.
- **Team.** This report was prepared by a staff team led by A. Wolfe, and comprising C. Faircloth, M. Garcia-Escribano (all WHD), and T. Miyoshi (SPR).

I. BACKGROUND

Very strong economic fundamentals and institutional policy framework

1. **Colombia's strong institutional frameworks and sound policy management have underpinned a strong macroeconomic performance and contributed to reduce vulnerabilities.** Strong fiscal and monetary policy frameworks and adherence to sound policies have fostered private-sector led growth, increased foreign direct investment, and reduced balance sheet vulnerabilities. During 2004–09, real GDP growth averaged 4.1 percent, boosted by buoyant private investment and exports (especially of petroleum products). The inflation targeting regime (adopted in the late 1990s) was successful in anchoring expectations and bringing inflation down to single digits, while a flexible exchange rate helped mitigate external shocks. In addition, a rolling 5-year fiscal framework, which would be strengthened by the structural fiscal rule presently under discussion in the congress, has guided fiscal consolidation and enabled a decline in the public debt-to-GDP ratio of almost 7 percentage points from 2004 to 2009. At the same time effective financial sector supervision and regulation protected the integrity of the financial system and maintained financial soundness indicators at solid levels.

2. **Colombia's institutional framework and policies have been assessed very positively by the Executive Board.** During the Board discussion of the last Article IV consultation in March 2010 (SM/10/62, 3/17/2010), Executive Directors praised the Colombian authorities for their sound policy response to the global crisis and the strong institutional framework, and considered that the country was well-placed to confront the challenges posed by the still uncertain global outlook. They welcomed the authorities' continued commitment to the flexible exchange rate and inflation targeting regimes, and to preserving medium-term fiscal sustainability guided by their medium-term framework and the fiscal rule that was being considered. Directors were encouraged by the resilience of Colombia's financial system and the ongoing efforts to build additional buffers (Box 1). Directors expressed similar views about Colombia's fundamentals during the May 2010 Board discussion of the request for a one-year FCL arrangement (EBS/10/67, 4/22/2010).

Performance since the global crisis

3. **The Colombian economy exhibited great resilience during the global crisis, and the output recovery is well entrenched** (Table 1, Figures 1 and 2). Following a short-lived contraction, economic activity started to recover in the second half of 2009, supported by a large fiscal stimulus. Activity gained further momentum in 2010 and real GDP grew by 4.3 percent (despite output disruptions late in the year caused by severe flooding). Growth continued to be led by domestic demand, and the external current account deficit widened to 3.1 percent of GDP, reflecting a sharp pick up in imports. Strong private capital inflows (mainly foreign direct investment) more than offset a decline in official borrowing, resulting in an overall balance of payments surplus of more than US\$3 billion (Tables 2 and 3).

Box 1. 2010 Article IV Consultation—Update on Key Staff Recommendations and Assessments

- *With expectations still inside the target range, the monetary stance should remain accommodative until there is clear evidence of a sustained recovery.* Forward-looking indicators of activity and inflation supported maintaining the monetary policy stance unchanged during 2010. A gradual tightening was initiated in early 2011 as price and activity indicators gained strength.
- *The deterioration of the fiscal position in 2009, including through a modest fiscal stimulus, did not jeopardize medium-term sustainability.* The fiscal stance remained supportive of economic recovery during 2010, and the overall fiscal deficit was similar to the previous year. The fiscal position envisaged for 2011 is also appropriate (considering expenses related to weather-related damages in late 2010) and is consistent with the authorities' fiscal consolidation plan.
- *The authorities' strategy of relying on the exchange rate as the first line of defense to private capital inflows is appropriate, but other instruments may have to be considered if inflows are too large.* Capital inflows increased significantly in 2010, and the authorities responded by letting the exchange rate appreciate, reintroducing a well-defined intervention rule, and reducing the drawdown of government foreign-currency assets to finance the fiscal deficit.
- *It would be advisable to develop a strategy to minimize medium-term fiscal risks, including those resulting from investment tax incentives and special tax regimes, and pension spending.* In late 2010, the new government adopted a fiscal reform package that eliminated many of the tax incentives, and work on pension and healthcare reform is underway.
- *Higher oil-related revenues over the medium term would provide the opportunity to build up gradually reserves and continue lowering external vulnerabilities.* The authorities are looking into mechanisms to build external assets of the government in a transparent manner without affecting exchange rate flexibility.

Financial soundness indicators remained solid, with capital adequacy and profitability at strong levels and NPLs broadly stable.

4. **In 2010 macroeconomic policies continued to support the economic recovery and responded appropriately to increased private capital inflows.** The fiscal deficit reached 3 percent of GDP by year end (Tables 4 and 5). On the monetary front, the central bank lowered the policy rate in April to an historic low of 3 percent and maintained it at this level until February 2011 (Table 6 and Figure 2). In response to growing private capital inflows, the government delayed the repatriation of dividends from the oil company in which it holds a majority stake, while the central bank adopted a rules-based intervention program (pre-announced purchases of US\$20 million per day). Notwithstanding these measures, the peso appreciated by 14.5 percent in nominal terms against the U.S. dollar from January to October

(although the trend reversed in the last quarter of the year). Close monitoring of the financial system continued (Table 7 and Figure 3). The Central Bank signed an agreement with the Financial Superintendency of Banks to improve the exchange of information and also tailored dynamic provisioning to bank-specifics to better monitor and address the build-up of vulnerabilities

5. **The presidential elections had little effect on macroeconomic policies or investors' risk perceptions.** Elections took place in May and June, and a new administration (of President Manuel Santos) took office in early August. The central bank governor remained in his position (as stipulated by the central bank law), and the new Minister of Finance launched initiatives that supported his predecessor's efforts to strengthen the fiscal policy framework (e.g., by adopting a fiscal reform package that included rationalizing tax incentives and submitting to congress important structural fiscal reforms, see paragraph 10 below). In addition, the new government completed the negotiation of a free-trade agreement with the United States that had been initiated in 2006.¹

Near-term economic outlook

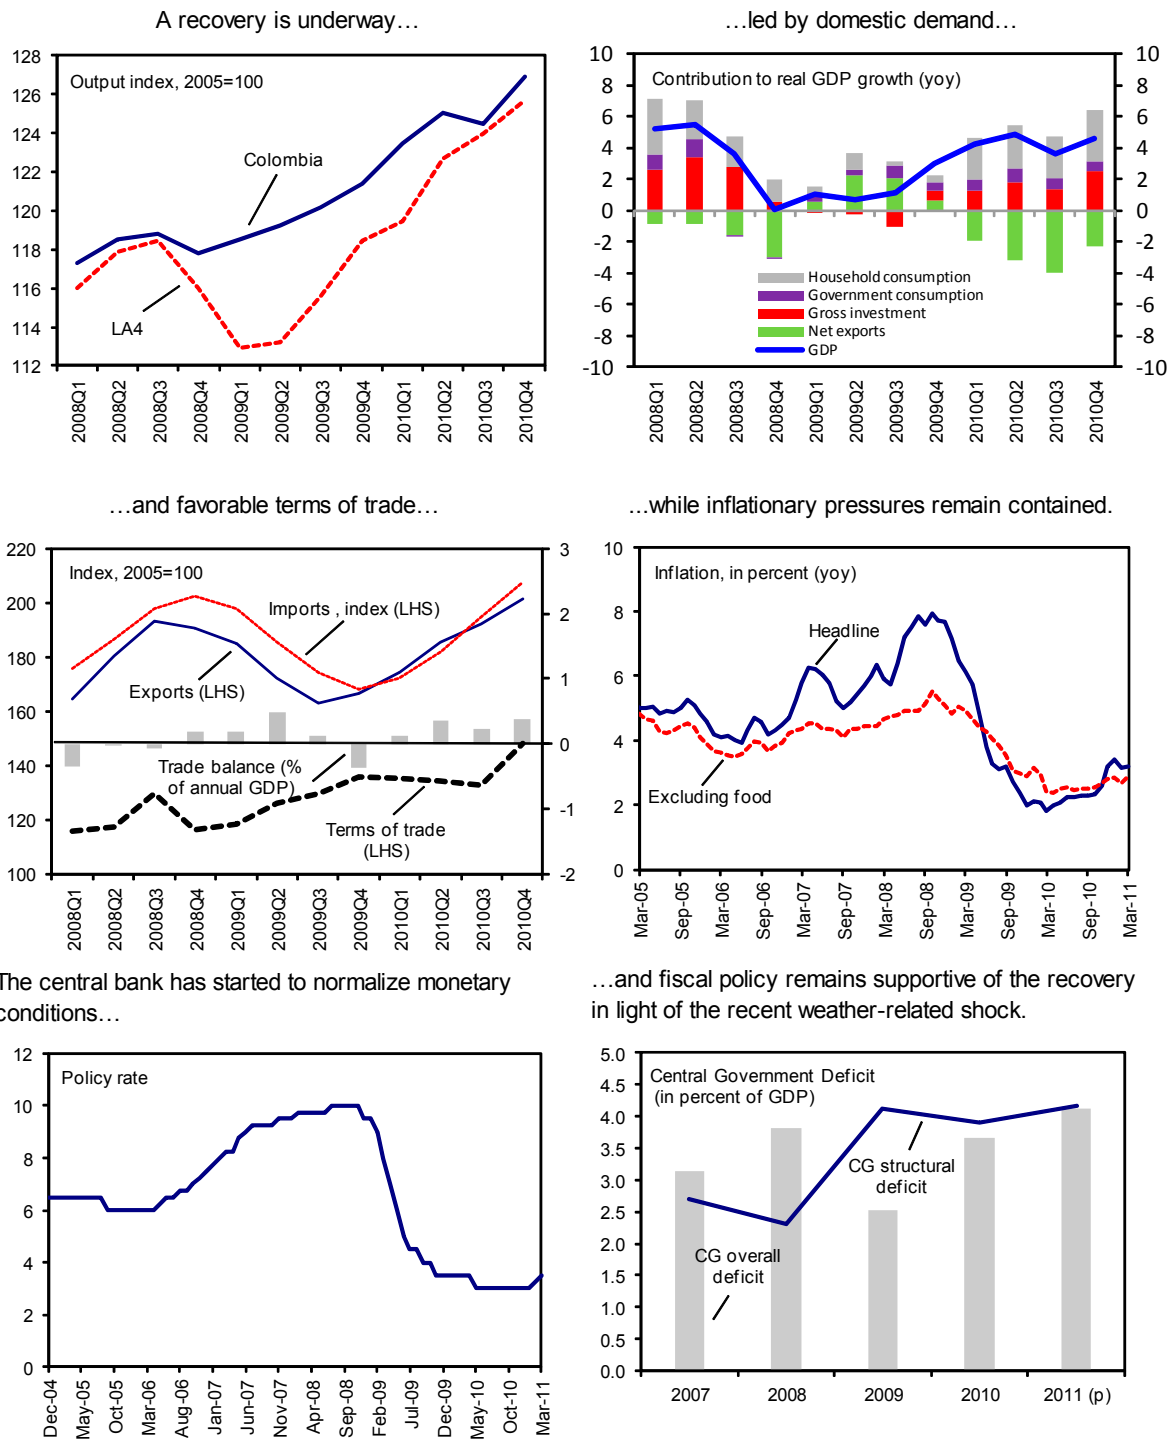

6. **The outlook for 2011 is generally positive.** Real GDP growth is expected to exceed 4½ percent, driven by still strong domestic demand; this growth outturn would leave a very small output gap by year end that would be fully closed in 2012. Inflation in 2011 is expected to remain within the 2–4 percent official target range, despite the higher world prices for fuel and food, as the central bank would continue to adjust the policy rate in a measured manner to its neutral level. The external current account deficit is projected to decline to 2.1 percent of GDP, as a result of higher oil prices, while net capital inflows are expected to remain strong, reflecting both solid domestic fundamentals and abundant global liquidity.

Source: Staff estimates.

¹ To enter into effect, the agreement needs to be approved by the United States Senate and the Colombian Congress.

Source: April 2011 GFSR Statistical Appendix.

7. **Fiscal policy in 2011 will approach a more neutral position but remain supportive of economic activity, with consolidation to take hold beginning in 2012.** The budget for 2011 (approved in October 2010) contemplates an increase in infrastructure spending of about $\frac{3}{4}$ percent of GDP and an additional spending (transfers) for $\frac{1}{2}$ percent of GDP to mitigate the effects of the floods. This planned pick up in government expenditure is expected to be largely offset by higher revenue, stemming from the broadening of the tax base produced by the reform of late 2010 (see paragraph 9) and higher oil-related revenues. In all, the deficit of the combined public sector (central government) in 2011 is expected to reach 3.5 (4.2) percent of GDP, somewhat higher than last year's.

8. **Pressures for further peso appreciation are likely to continue.**

Global liquidity conditions and the favorable prospects for the Colombian economy (boosted by the recent sovereign upgrade) will maintain the upward pressure on the peso and may moderate the pace of monetary tightening. Given the planned fiscal policy, which includes emergency spending for last year's floods, mitigation of the effects of sizeable capital inflows would fall to the central bank—which would consider supplementing the flexible exchange rate regime and its discretionary foreign exchange purchases program of at least US\$20 million per day (until at least June 17) with additional macroprudential measures (see paragraph 12).² During 2011, the peso has appreciated by about 5 percent against the U.S. dollar, but preliminary estimates suggest that the real effective exchange rate has depreciated by some 10 percent since the last CGER assessment in the fall of 2010, bringing the estimates of overvaluation of the peso to the 0–10 percent range.

² Colombia's intervention, in percentage of GDP, is limited relative to other countries in the Latin America region.

Medium-term policies

Fiscal strategy

9. **The new government's fiscal strategy aims at strengthening the fiscal position, although with higher levels of revenue and expenditure.** The tax reform passed in December last year, further tax policy and tax administration reforms in the coming years (FAD is providing technical assistance in these areas), royalty reform (see paragraph 10), and tight control over current expenditure are expected to provide the basis for fiscal consolidation over 2012–15, while creating fiscal space for needed infrastructure expenditure.³ The authorities' intention is to shift the fiscal stance to a neutral position in 2012 once the output gap is closed.

10. **The authorities are also pursuing an ambitious set of structural reforms that would rationalize expenditure growth and safeguard fiscal dynamics.** These reforms will strengthen Colombia's fiscal framework further, and their key pillars include:⁴

- *Fiscal rule:* The rule presented to Congress will bolster credibility in fiscal management and ensure debt sustainability by establishing a limit on the structural deficit of the central government of 2 percent of GDP from 2015 onwards.
- *Royalty reform:* The reform of the system of royalties aims at achieving a more equitable distribution of royalties among regions and over time by establishing criteria and parameters for allocating and saving royalty flows through time.
- *Codifying fiscal sustainability:* The government aims at securing a constitutional mandate on fiscal sustainability. In practice, for example, this will require judicial rulings to explicitly consider their fiscal implications; thus, helping to underpin the fiscal consolidation sought by the government.

11. **The government's fiscal reform agenda would yield important dividends in transparency and fiscal consolidation, but risks remain.** Under conservative assumptions about the yield of revenue-enhancing measures, staff projects that the central government deficit would decline below 2 percent of GDP (the ceiling under the fiscal rule) by 2016, while the overall public sector balance would be nearer to zero. A key downside risk, however, are the costs of healthcare reform. The Constitutional Court decided in 2009 that

³ The tax reform package (adopted in December 2010) broadened the taxable base by eliminating the fixed asset tax credit, closing loopholes in the financial transactions tax, and increasing the rate and lowering the threshold of the net wealth tax.

⁴ These reforms involve constitutional amendments and, therefore, require a series of debates in Congress, about half of which have taken place. The remaining debates are scheduled in this March–June session of Congress.

the government needs to revise its proposed healthcare reforms and, as a result, projected health care costs have not been factored into expenditure projections. When the revised proposal is presented to Congress later this year, the government would need to incorporate its costs in its expenditure projection and identify offsetting revenue and expenditure measures to safeguard fiscal consolidation.

Financial sector

12. **Close monitoring of the financial sector remains a key objective.** Amidst low lending rates and easy global financial conditions, credit to the private sector, which has recovered strongly since mid-2010 (and grew by about 18.5 percent (y/y) in January 2011), may gain further steam. Financial soundness indicators and supervisory practices remain strong and generally above those in other countries in the region, and the authorities are determined to keep monitoring closely developments to mitigate the inherent procyclicality of financial systems and avoid the emergence of asset price bubbles. If inflows of private capital were to intensify in the environment of an on-going fiscal consolidation and normalized monetary policy, the authorities would be inclined to tighten the macroprudential (MaP) instruments currently in place (e.g., limits on open foreign exchange positions) and perhaps redeploy other MaP instruments used in 2007–08 (e.g., marginal reserve requirements).⁵ An FSAP update is planned for 2013.⁶

Financial Soundness Indicators, 2010 (in percent)

Capital to RWA 1/	NPLs to Total Loans	Provisions to NPL	Return on Assets	Return on Equity
Colombia 18.0	Uruguay 1.0	Mexico 200.7	Colombia 3.9	Colombia 27.2

Downside risks

13. **While global conditions have improved since the last Article IV consultation, downside risks remain.** While the risk of a “double-dip” in global growth has diminished, the resilience and strength of the global recovery remains unclear and other global events

⁵ MaP instruments deployed in mid-2007 resulted in a decline in foreign borrowing, but other inflows, including FDI, remained strong. In May 2008, the authorities imposed a minimum stay for FDI inflows and an increase in the unremunerated reserve requirement on portfolio inflows from 40 to 50 percent; however, the impact of these measures is difficult to assess as they were abandoned a few months later.

⁶ The last FSAP update was carried out in September–October 2004 and the FSSA was discussed in April, 2005 (SM/05/124, 4/6/2005). A key monitoring priority going forward is on the corporate and household balance sheets.

have added to the overall degree of uncertainty in commodity and financial markets. An adverse shock that lowers global growth would impact the outlook for Colombia's commodity exports, remittances, and foreign direct investment. At the same time, concerns about fiscal sustainability in several advanced economies and the unprecedented scale of government financing needs worldwide could affect the availability and access to external financing.

II. ROLE OF THE FLEXIBLE CREDIT LINE ARRANGEMENT

14. **The Colombian authorities are of the view that the uncertainties surrounding the external environment remain elevated and that a successor FCL arrangement with a duration of two years would provide useful protection against continuing external tail risks.** They consider that the current FCL arrangement, which expires in May 2011, has allowed Colombia to maintain policy flexibility despite global and regional uncertainties (including from neighboring Venezuela). They also are of the view that global uncertainties have not abated significantly since they requested the current FCL; on this basis, they believe that a two-year FCL arrangement, which they intend to treat as precautionary, will continue providing space for policy flexibility while bolstering prospects for Colombia's access to international markets if tail risks were to materialize (see letter attached).

15. **Colombia is particularly vulnerable to commodity price shocks.** Commodity exports accounted for about 65 percent of export revenue in 2010 (up from 50 percent in 2007) and the bulk of FDI inflows are in commodity-related projects (mainly oil). As a result, an adverse shock to oil and other primary exports (e.g., coffee) could result in a significant increase in Colombia's financing needs.

16. **A sudden deterioration of external financing conditions also would affect Colombia.** Tighter global financial conditions would lower the inflows of private capital envisaged in the baseline balance of payments scenario (Table 2), and public external financing conditions also could be affected, even if the government were to maintain access to international markets at favorable rates, possibly creating roll-over difficulties.

17. **In the staff's view, access under a two-year FCL arrangement in the order of US\$6.1 billion (SDR 3.87 billion or 500 percent of quota) would provide reasonable coverage against the risks noted above.** To secure broadly the same degree of protection under a new FCL arrangement as garnered under the current one, and as a result of the baseline scenario relying more heavily on increased export revenues and capital inflows related to commodities, precisely those flows most subject to tail risks, a higher level of access than under the present FCL would be necessary. In fact, the adverse external scenario prepared by staff applies broadly the same set of shocks to Colombia's projected external financing requirements as those applied at the time of the request of the current FCL arrangement (see Box 2). The only difference is the addition of a shock to remittances (which declined by almost one quarter during the global financial crisis). The exercise shows that in order to have a similar level of protection against the same set of shocks, Colombia would need to have access to more Fund resources than under the current FCL.

18. **As was the case in the requests for previous FCL arrangements with Colombia, it is expected that a worsening of the external environment would impact both the current and capital accounts.** As noted, a slower global recovery would reduce remittances while lower prices for oil and other commodities would impact exports as well as oil-and-mineral-related FDI inflows. In addition, renewed pressures on international capital markets would reduce Colombia's access to external funding.⁷ If all these shocks were to materialize over the same 12-month period, their combined effect would be to lower Colombia's projected balance of payments inflows by close to US\$7.6 billion, on average, during 2011–12. About one quarter of the external financing shortfall could be absorbed by foregoing the increase in international reserves projected in staff's baseline scenario; however, this would still result in (net) external financing needs of about US\$5.6 billion on average (Table 3 and Box 2).

Box 2. Illustrative Adverse Scenario

An adverse illustrative scenario developed by staff suggests that Colombia could experience an external financing shortfall in 2011 or 2012 on the order of US\$5.6 billion (equivalent to about 465 percent of quota) from a set of shocks that hit the country in either of these years. As in the staff report for the FCL arrangement expiring in May 2011, the scenario assumes concurrent shocks within a year to both the current and capital accounts of Colombia's balance of payments resulting from a worsening of global financial conditions and lower global growth. The shocks are assumed to lower commodity prices (which remain a key source of vulnerability for Colombia), remittances, and access to international capital markets.

Compared with a baseline balance of payments scenario where international reserves increase by just under US\$2 billion on average during 2011–12, the concurrent shocks could create a shortfall of about US\$5.6 billion on average during 2011–12, if Colombia were to forego the increase in international reserves assumed in the baseline projection (Table 3).

The main assumptions underlying this illustrative adverse scenario mirror those in the current FCL (except for the addition of a shock to remittances) and are as follows:

- A decline of 15 percent in world oil prices and 7.5 percent in the prices of other commodities relative to the 2011–12 baseline.
- A decline of 7.5 percent in remittances relative to the 2011–12 baseline.
- A fall in FDI inflows of 10 percent relative to the 2011–12 baseline.
- A ceiling on rollover rates on short term debt equal to 100 percent.
- Declines of 15 percent in medium-term inflows to the non-financial private sector and of 25 percent in inflows to the financial private sector, relative to the 2011–12 baseline.
- A decline of 10 percent in medium-term inflows to the public sector relative to the 2011–12 baseline.

These adverse shocks are smaller in scale than those experienced by Colombia during the financial crisis; on that occasion, world oil prices declined by more than 35 percent and non-fuel commodity prices fell by 16 percent; net FDI and remittance flows to Colombia contracted by 50 percent and 14½ percent, respectively; and short-term public and private debt inflows fell short of repayments by around 38 and 28 percentage points, respectively.

⁷ Unlike Mexico, in Colombia, there are no large non-resident exposures to domestic equity and debt markets.

19. **Staff assesses that Colombia continues to meet the qualification criteria identified in paragraph 2 of the FCL Decision on access to Fund resources under a new FCL arrangement** (Figures 4 and 5 and Table 8).⁸ As noted earlier, Colombia has very strong economic fundamentals and institutional policy framework and a sustained track record of implementation of very strong policies, and the new government is firmly committed to maintaining such policies in the future. Staff's assessment of Colombia's qualification is based, in particular, on the following criteria:

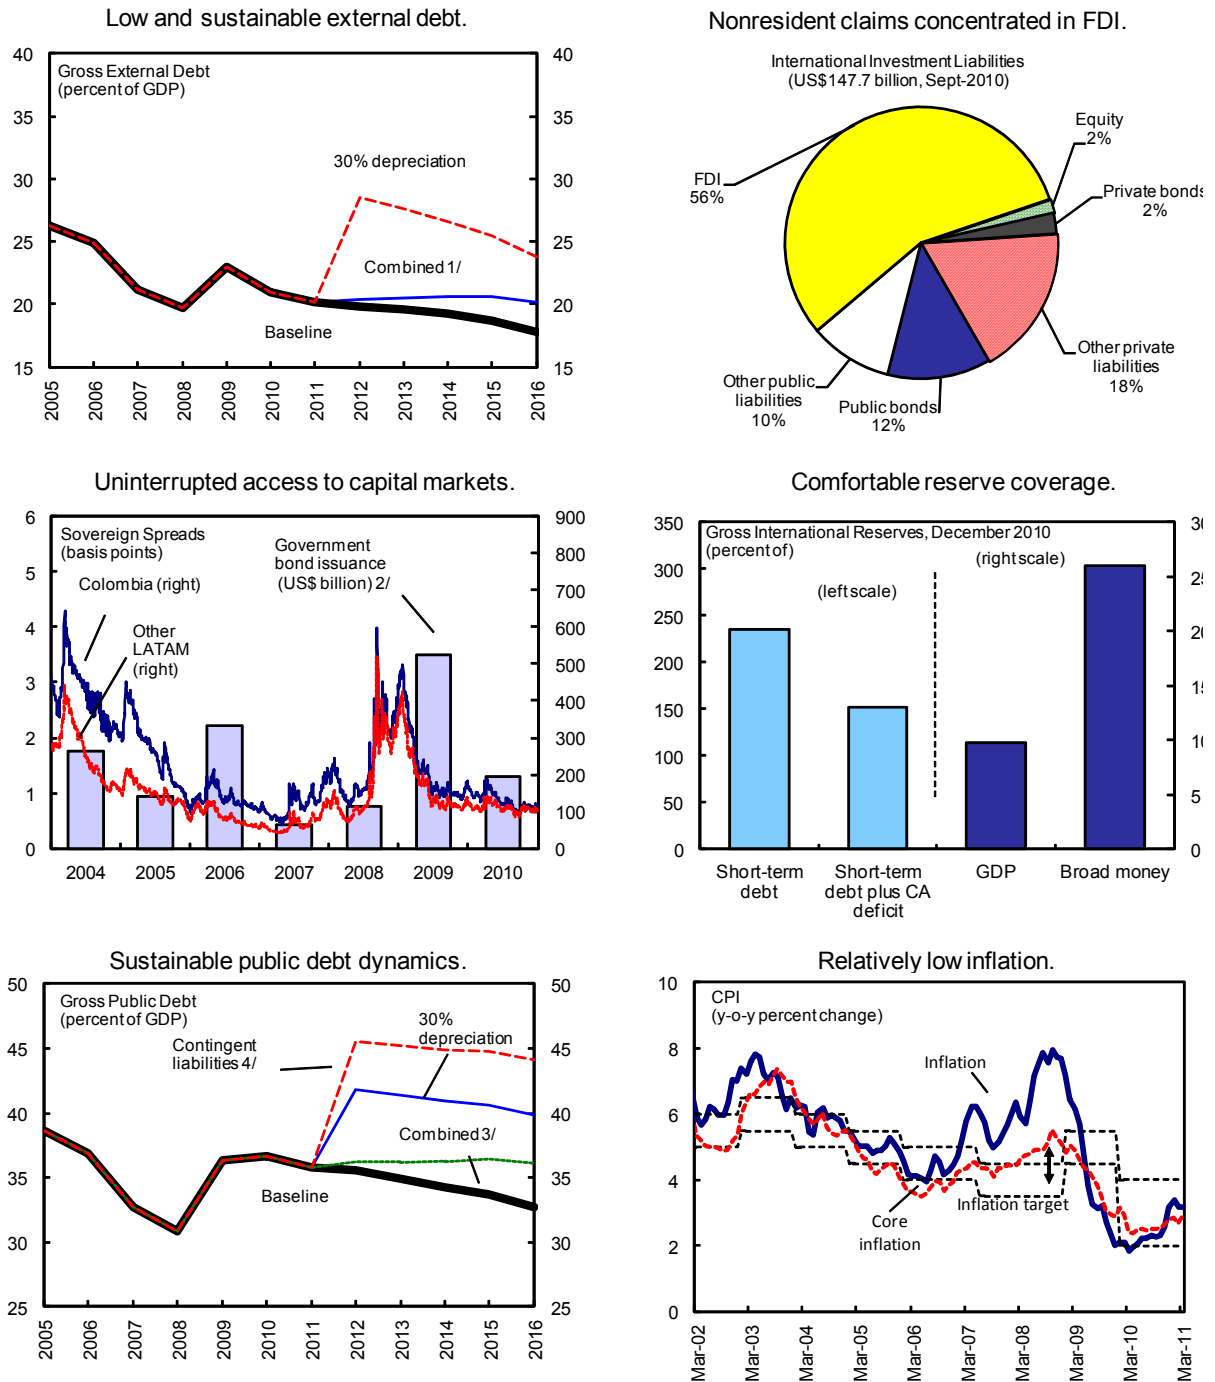

- **Sustainable external position.** Preliminary data suggest that the external debt-to-GDP ratio fell to 20.9 percent at end-2010 (22.9 percent in 2009), with public external debt remaining at moderate levels. Staff's updated external debt sustainability analysis (Figure 6 and Table 9) suggests that external debt ratios are expected to decline over the medium term and would remain manageable even under large negative shocks. Based on the latest WEO projections for oil prices, the external current account deficit is projected to stabilize at about 2 percent of GDP over the medium term.
- **Capital account position dominated by private flows.** Capital account flows in Colombia are predominantly private—mostly in the form of FDI (US\$9 billion in 2010, 3.2 percent of GDP).
- **Track record of steady sovereign access to international capital markets at favorable terms.** The Colombian government has had continued access to international capital markets at favorable terms, and Standard & Poors recently upgraded the sovereign to investment grade (the other credit rating agencies rate the sovereign at one notch below). During 2009 Colombia issued external bonds for US\$3.5 billion, and in 2010 it placed peso-denominated bonds for the equivalent of US\$1.3 billion in international capital markets. Sovereign CDS spreads are presently 40 basis points above Chile's, broadly the same as in Brazil and Mexico, and somewhat lower than Peru's.
- **Reserve position.** Colombia's gross international reserves stood at US\$28 billion at end-2010 (about 10 percent above the level at the time of the approval of the current FCL arrangement). The current level of reserves is comfortable, with coverage equivalent to about 6.5 months of imports of goods and services and exceeding 150 percent of the sum of external debt falling due and the external current account deficit projected for 2011 (Figure 5).

⁸ The Executive Board last assessed Colombia's adherence to the FCL qualification criteria on May 7, 2010, during the approval of a new FCL arrangement for 300 percent of quota (EBS/10/67).

- **Sound public finances, including a sustainable public debt position.** The Colombian authorities remain committed to fiscal sustainability. The new government's medium-term fiscal strategy will be guided by the Fiscal Responsibility Law submitted to Congress, which would limit the structural deficit of the central government to 2 percent of GDP starting in 2015. Staff's updated debt sustainability analysis (Figure 7 and Table 10) suggests that public debt would remain manageable and on a downward trajectory under alternative adverse scenarios.
- **Low and stable inflation, in the context of a sound monetary and exchange rate policy framework.** Notwithstanding the adverse effects of heavy rains on food prices at end-2010, inflation and inflation expectations continue to be well anchored within the inflation target range of 2–4 percent. The authorities remain committed to the inflation targeting framework and a flexible exchange rate regime.
- **Absence of bank solvency problems that pose an imminent threat of a systemic banking crisis.** As noted, Colombia's financial soundness indicators remain strong. As of December 2010, capital adequacy ratios stood at 18 percent; the ratio of NPLs to gross loans was low; provisions represented 174 percent of nonperforming loans; and banking system liquidity was adequate.
- **Effective financial sector supervision.** Colombia's regulatory and supervisory frameworks are sound and supported by a well established safety net. A recently finalized agreement between the Central Bank and the Financial Superintendent has improved the exchange of financial information.
- **Data transparency and integrity.** The overall quality of Colombian macroeconomic data is good and continues to meet the high standards found during the 2006 data ROSC. Colombia remains in observance of the Special Data Dissemination Standard (SDDS), and the authorities provide all relevant of data to the public on a timely basis.

20. **The authorities' written communication (attachment) confirms their continued commitment to maintaining strong policy and institutional frameworks.** The authorities' priorities are to support the ongoing recovery while maintaining macroeconomic and financial stability. They are committed to continue strengthening their strong policy framework, anchored on a medium-term fiscal framework, inflation targeting, a flexible exchange rate, and strong financial sector supervision and regulation.

3/ Combined permanent $\frac{1}{4}$ standard deviation shocks applied to real interest rate, growth, and primary balance.

4/ One-time 10 percent of GDP increase in debt-creating liabilities.

Figure 5. Colombia: Reserve Coverage in International Perspective 1/

Sources: World Economic Outlook and IMF staff estimates.

1/ Estimates for 2010. Figures for Mexico and Poland do not include resources available under their FCL arrangements.

2/ GIR at the end of 2010 in percent of ST debt at remaining maturity and current account deficit in 2011. The current account is set to zero if it is in surplus.

III. IMPACT ON FUND FINANCES, RISKS, AND SAFEGUARDS

21. **Access under the proposed two-year FCL arrangement for Colombia (SDR 3.87 billion or 500 percent of quota) would be manageable for Fund finances.** The Fund's liquidity is expected to remain adequate after the approval of the proposed FCL arrangement for Colombia (see supplement assessing the impact on the Fund's finances and liquidity position).

22. **Colombia's strong repayment capacity will help mitigate the risks to the Fund.** The authorities have indicated that they intend to continue to treat the FCL arrangement as precautionary. Nevertheless, even if Colombia were to draw all the resources available under the new FCL arrangement, its capacity to meet its financial obligations to the Fund would remain strong. Colombia has an excellent track record of meeting its financial obligations, the government has a deep commitment to macroeconomic stability and prudent policies, and the economy's medium-term growth prospects are excellent. Even if the adverse scenario were to materialize, Colombia's external debt would remain on a sustainable medium-term path, with debt service remaining very manageable.

1/ Assumes full drawing of the FCL in 2011, and projected exports and GDP in the baseline scenario.

23. **Staff is in the process of completing the necessary safeguards procedures for an FCL arrangement.** The central bank has provided PricewaterhouseCoopers (PwC) with a new authorization to communicate with staff. On February 7, 2011, PwC issued an unqualified audit opinion on the central bank's 2010 financial statements, which states that the audit was conducted in accordance with International Standards on Auditing. A complete set of audited statements and PwC's opinion have been published on the central bank's external website. Staff has contacted PwC to schedule a discussion of the audit and obtain copies of any related control recommendations.

IV. STAFF APPRAISAL

24. **A successor FCL arrangement for Colombia would provide an appropriate buffer in support of the government's economic strategy.** Notwithstanding Colombia's very strong underlying fundamentals and medium-term prospects, uncertainties about the global recovery and the availability and access to external financing constitute key risks to the near-term outlook. A successor FCL arrangement for 500 percent of quota—which the authorities intend to treat as precautionary—would provide Colombia with an appropriate level of protection against a possible deterioration of global conditions (including lower

commodity prices), and help maintain confidence in the authorities' capacity to withstand external shocks while preserving their commitment to macroeconomic stability.

25. **Staff assesses that Colombia continues to meet the qualification criteria for access to FCL resources and recommends approval of a two-year FCL arrangement for SDR 3.87 billion (500 percent of quota).** As discussed above, Colombia has very strong policy frameworks and economic fundamentals and has demonstrated an excellent track record of policy implementation. The authorities' policy response to the global crisis has been sound, and their policy stance remains anchored in tested institutional policy frameworks that the authorities are seeking to strengthen further. In their letter the authorities reaffirm their commitment to maintain sound policies in the future and to react appropriately if shocks were to materialize. All of the above are assessed by staff to contain the risks to the Fund arising from a potential drawing under the proposed FCL arrangement. Risks to the Fund are further contained by the authorities' intention to treat the FCL arrangement as precautionary, and Colombia's very strong debt servicing record and manageable external debt service profile.

PROPOSED DECISION

The following decision, which may be adopted by a majority of the votes cast, is proposed for adoption by the Executive Board:

1. The Fund notes the cancellation by Colombia as of the date of approval of this decision, of its arrangement under the Flexible Credit Line approved by the Fund on May 7, 2010 (Decision No. 14616-(10/44), adopted May 7, 2010).
2. Colombia has requested a Flexible Credit Line arrangement in an amount equivalent to SDR 3.87 billion for a period of twenty-four months from the date of approval of this decision.
3. The Fund approves the Flexible Credit Line arrangement for Colombia set forth in EBS/11/61 (4/25/11).
4. The Fund waives the limitation in Article V, Section 3(b)(iii).

1/ Includes central administration only.

2/ Payments for fuel subsidies granted in 2007-08 were distributed across the 2007-2009 budgets. A fuel price stabilization fund was created at end-2008 to eliminate fuel subsidies.

3/ Includes income tax payments and dividends from Ecopetrol that correspond to earnings from the previous year.

4/ Adjusts for the output gap, oil price expectations, and fuel subsidies.

Sources: Ministry of Finance; Banco de la República; and Fund staff estimates and projections.

1/ Combined public sector includes the central, regional and local governments, social security, and public sector enterprises.

Figures for 2008 and projections reflect exclusion of Ecopetrol operations and privatization of health care, which reduces revenue and spending by about 2 percent of GDP and 1.5 percent of GDP, respectively, in 2008.

2/ Expenditure reported on commitments basis.

3/ Payments for fuel subsidies granted in 2007-08 were distributed across the 2007-2009 budgets. At end-2008, a fuel price stabilization fund was created to eliminate fuel subsidies.

4/ Includes adjustments to put spending on commitment basis and the change in unpaid bills of selected nonfinancial public enterprises.

5/ Interest payments on public banks restructuring bonds and mortgage debt relief related costs.

6/ Adjusts for the output gap, oil price expectations, fuel subsidies, and one-off additional pension-related revenues.

7/ Includes income tax payments and dividends from Ecopetrol that correspond to earnings from the previous year, and royalties to local governments.

8/ Includes Ecopetrol and Banco de la República's outstanding external debt.

Source: IMF staff estimates.

1/ Does not assume any drawings under the Flexible Credit Line arrangement.

2/ Derived as $[(1 - g) - \pi(1 + r)] / (1 + g + \pi r)$ times previous period debt stock, with r = nominal effective interest rate on external debt, π = change in domestic GDP deflator in US dollar terms, g = real GDP growth rate, ϵ = nominal appreciation (increase in dollar value of domestic currency), and α = share of domestic-currency denominated debt in total external debt.

3/ The contribution from price and exchange rate changes is defined as $[-\pi(1 + g) + \epsilon\alpha(1 + r)] / (1 + g + \pi r)$ times previous period debt stock. π increases with an appreciating domestic currency ($\epsilon > 0$) and rising inflation (based on GDP deflator).

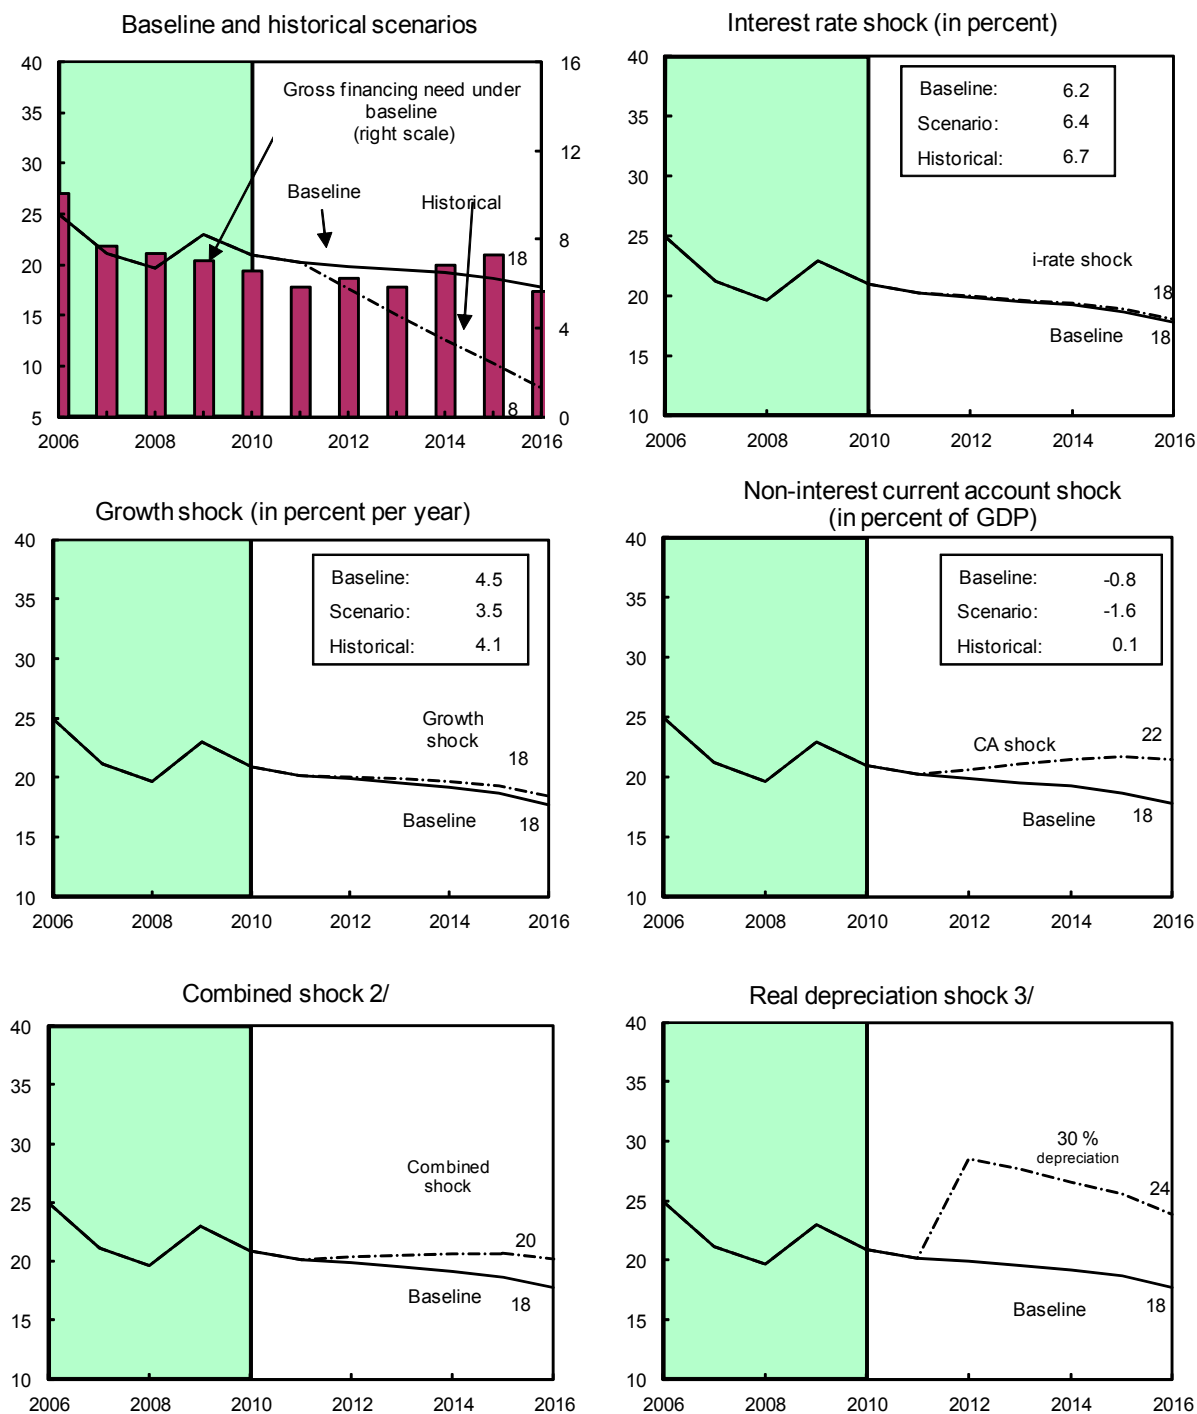

4/ For projection, line includes the impact of price and exchange rate changes.

5/ Defined as current account deficit, plus amortization on medium- and long-term debt, plus short-term debt at end of previous period.

6/ The key variables include real GDP growth, nominal interest rate, dollar deflator growth, and both non-interest current account and non-debt inflows in percent of GDP.

7/ Long-run, constant balance that stabilizes the debt ratio assuming that key variables (real GDP growth, nominal interest rate, dollar deflator growth, and non-debt inflows in percent of GDP) remain at their levels of the last projection year.

Figure 6. Colombia: External Debt Sustainability: Bound Tests 1/
(External debt in percent of GDP)

Sources: International Monetary Fund, Country desk data, and staff estimates.

1/ Shaded areas represent actual data. Individual shocks are permanent one-half standard deviation shocks. Figures in the boxes represent average projections for the respective variables in the baseline and scenario being presented. Ten-year historical average for the variable is also shown.

2/ Permanent 1/4 standard deviation shocks applied to real interest rate, growth rate, and current account balance.

3/ One-time real depreciation of 30 percent occurs in 2012, with real depreciation defined as nominal depreciation (measured by percentage fall in dollar value of local currency) minus domestic inflation (based on GDP deflator).

Source: IMF staff estimates.

1/ Gross debt of the combined public sector, including Ecopetrol and Banco de la República's outstanding external debt. Does not assume any drawings under the Flexible Credit Line arrangement.

2/ Derived as $[(r - \pi)(1 + g) - g + \alpha\delta(1 + \pi)] / (1 + g + \pi - g\pi)$ times previous period debt ratio, with r = interest rate, π = growth rate of GDP deflator, g = real GDP growth rate, α = share of foreign-currency denominated debt, and δ = nominal exchange rate depreciation (measured by increase in local currency value of U.S. dollar).

3/ The real interest rate contribution is derived from the denominator in footnote 2/ as $r - \pi(1 + g)$ and the real growth contribution as $-g$.

4/ The exchange rate contribution is derived from the numerator in footnote 2/ as $\alpha\delta(1 + \pi)$.

5/ For projections, this line includes exchange rate changes.

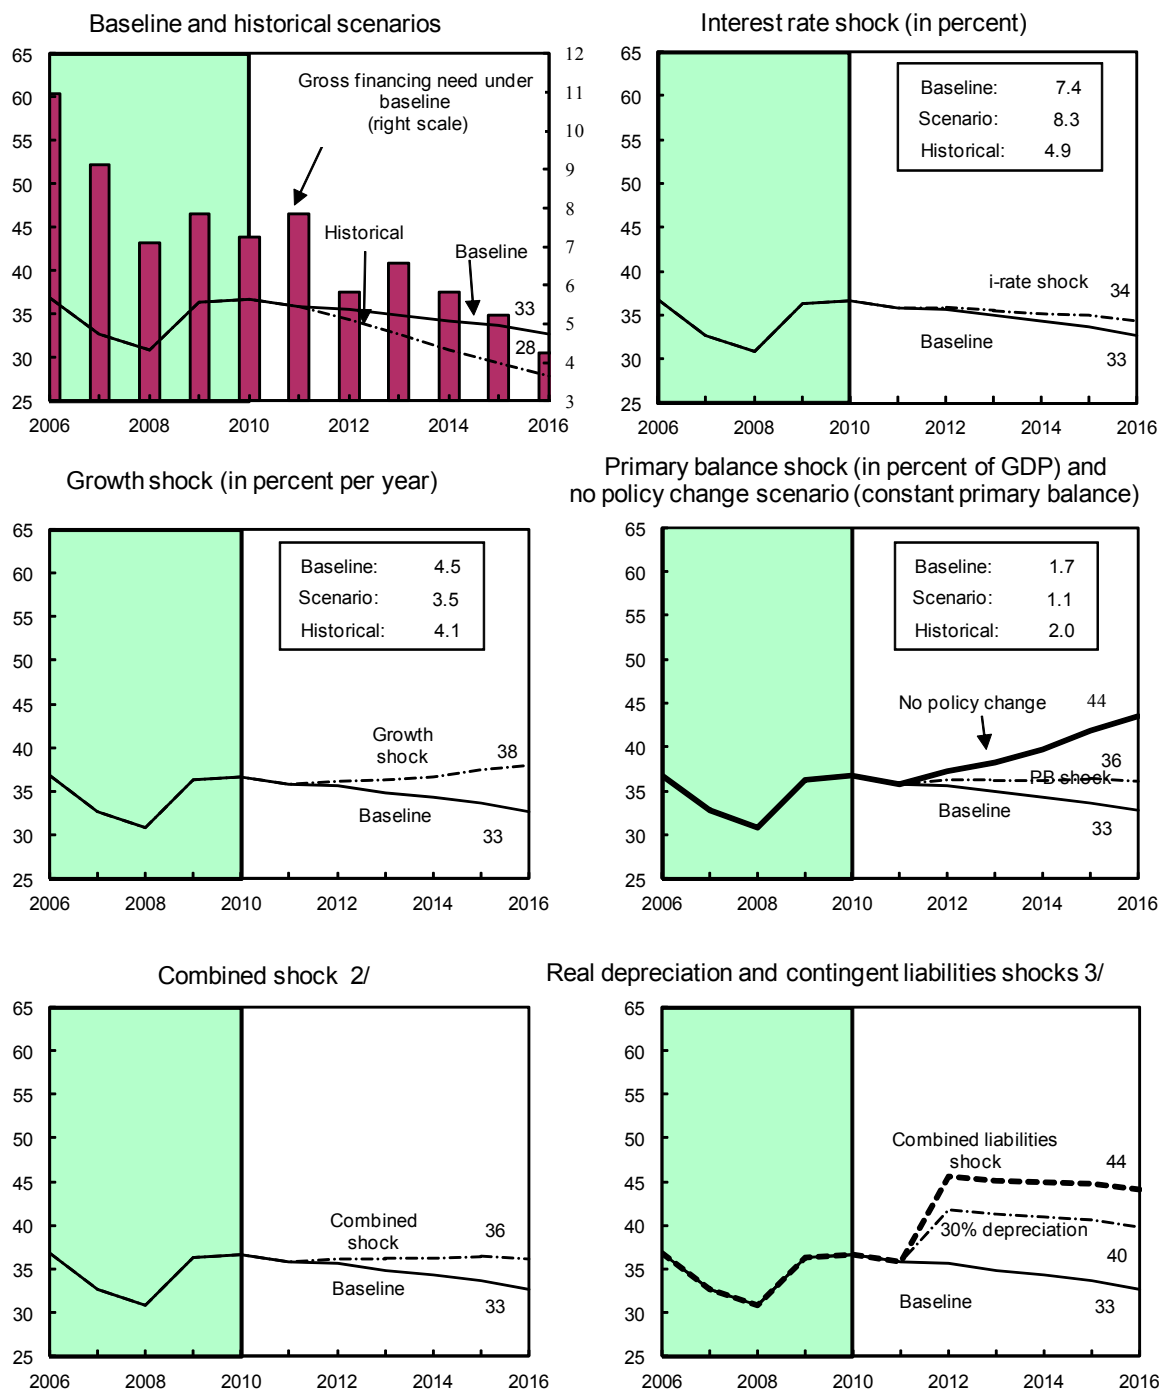

6/ Defined as public sector deficit plus amortization of medium and long-term public sector debt, plus short-term debt at end of previous period.

7/ The key variables include real GDP growth, real interest rate, and primary balance in percent of GDP.

8/ Derived as nominal interest expenditure divided by previous period debt stock.

9/ Assumes that key variables (real GDP growth, real interest rate, and other identified debt-creating flows) remain at the level of the last projection year.

(Public debt in percent of GDP)

Sources: International Monetary Fund, country desk data, and staff estimates.

1/ Shaded areas represent actual data. Individual shocks are permanent one-half standard deviation shocks. Figures in the boxes represent average projections for the respective variables in the baseline and scenario being presented. Ten-year historical average for the variable is also shown.

2/ Permanent 1/4 standard deviation shocks applied to real interest rate, growth rate, and primary balance.

3/ One-time real depreciation of 30 percent and 10 percent of GDP shock to contingent liabilities occur in 2012, with real depreciation defined as nominal depreciation (measured by percentage fall in dollar value of local currency) minus domestic inflation (based on GDP deflator).

COLOMBIA—TWENTY-FOUR MONTH FLEXIBLE CREDIT LINE ARRANGEMENT

Attached hereto is a written communication dated April 20, 2011 from the Minister of Finance and Public Credit and the Governor of the Central Bank of Colombia requesting a Flexible Credit Line arrangement in accordance with paragraph 6(a)(iv)(I) of Decision No. 14283-(09/29), adopted March 24, 2009, as amended, on the Flexible Credit Line Arrangements.

In response to Colombia's request, the International Monetary Fund (the "Fund") grants this Flexible Credit Line arrangement in accordance with the following provisions:

1. For a period of twenty-four months from May 6, 2011, Colombia will have the right to make purchases from the Fund in an amount equivalent to SDR 3.87 billion subject to paragraphs 2, 3, and 4 below, without further review by the Fund.
2. (a) Colombia will not make purchases under this arrangement after May 5, 2012, until an Executive Board review of Colombia's continued qualification for this Flexible Credit Line arrangement has been completed.

(b) The limitation in paragraph 2(a) above shall not apply to purchases under this arrangement that would not increase the Fund's holdings of Colombia's currency subject to repurchase beyond 25 percent of quota.
3. Colombia will not make purchases under this Flexible Credit Line arrangement during any period in which Colombia: (i) has an overdue financial obligation to the Fund, or is failing to meet a repurchase expectation in respect of a noncomplying purchase pursuant to Decision No. 7842-(84/165) on the Guidelines on Corrective Action; or (ii) is failing to meet a repayment obligation to the PRG Trust established by Decision No. 8759-(87/176) ESAF, as amended, or a repayment expectation to that Trust pursuant to the provisions of Appendix I to the PRG Trust Instrument.

4. Consistent with the Fund's policies, Colombia's right to engage in the transactions covered by this Flexible Credit Line arrangement can be suspended only with respect to requests received by the Fund after (a) a formal declaration of ineligibility to use the Fund's resources pursuant to Articles V, Section 5, VI, Section 1(a), and XXVI, Section 2(a) of the Fund's Articles of Agreement, or (b) a decision of the Executive Board to suspend transactions, either generally pursuant to Article XXVII of the Fund's Articles of Agreement, or in order to consider a proposal, made by an Executive Director or the Managing Director, formally to suppress or to limit Colombia's eligibility to use the Fund's general resources. When notice of a decision of formal ineligibility or of a decision to consider a proposal is given pursuant to this paragraph 4, purchases under this arrangement will be resumed only after consultation has taken place between the Fund and Colombia and understandings have been reached regarding the circumstances in which such purchases can be resumed.

5. Purchases under this Flexible Credit Line arrangement shall be made in the currencies of other members selected in accordance with the policies and procedures of the Fund, unless, at the request of Colombia, the Fund agrees to provide SDRs at the time of the purchase.

6. Colombia shall pay a charge for this Flexible Credit Line arrangement in accordance with the decisions of the Fund.

7. (a) Colombia shall repurchase the amount of its currency that results from a purchase under this Flexible Credit Line arrangement in accordance with the provisions of the Articles of Agreement and decisions of the Fund, including those relating to repurchases, as Colombia's balance of payments and reserve position improves.

(b) Any reductions in Colombia's currency held by the Fund shall reduce the amounts subject to repurchase under (a) above in accordance with the principles applied by the Fund for this purpose at the time of the reduction.

8. Colombia shall provide the Fund with information necessary to assess its qualification for this FCL arrangement in the context of the review called for in paragraph 5(a) of Decision No. 14283-(09/29), adopted March 24, 2009, as amended, on the Flexible Credit Line Arrangements. In addition, after the period of the arrangement and while Colombia has outstanding purchases in the upper credit tranches, the government will consult with the Fund from time to time, at the initiative of the government or at the request of the Managing Director, as appropriate.

Bogotá, April 20, 2011

Mr. Dominique Strauss-Kahn
Managing Director
International Monetary Fund
Washington, D.C.

Dear Mr. Strauss-Kahn,

We would like to thank the Fund for the two FCL arrangements that have been approved for Colombia since early 2009. The instrument has been extremely useful for Colombia, by enabling our country to have access to substantial international liquidity in a difficult and uncertain period. At the same time, the arrangements have provided a strong signal of the Fund's support of our solid policy framework and prudent macroeconomic management.

Although the world economy and global financial conditions have improved markedly since the onset of the global financial crisis, the global economic recovery is far from assured and remains subject to downside risks, stemming from fiscal weaknesses in advanced countries, fragilities in large financial systems, sharp movements in commodity prices, and persistent risks of a slowdown in global activity. These risks translate into an uncertain outlook for external demand of our products, workers' remittances, and capital flows.

Colombia's recovery from the effects of the global crisis has been steady but measured, and the output gap created by the crisis has not been closed yet. In this context, we consider a key priority to maintain a macroeconomic policy stance supportive of sustainable growth in domestic activity and to withdraw stimulus in an orderly way as conditions warrant. Faced with these difficult conditions, we would like to have the capacity to respond to large adverse external shocks without altering the main course of our macroeconomic policies and therefore believe it is critical to secure another arrangement with the IMF under the Flexible Credit Line.

After almost one year from our previous FCL request, we see essentially the same risks to our external position that, if they were to materialize, would create a large external financing shortfall. In fact, our estimates suggest that a similar set of shocks to those underlying the current FCL would actually create a larger impact on our balance of payments in absolute terms. This motivates us to request larger access under a new FCL arrangement (albeit still well less than in the 2009 FCL).

In addition, we welcome the opportunity under the enhancement of the FCL facility to seek an arrangement for a period of two years, which is a superior option in our view than annual arrangements. However, along with the longer time horizon comes additional uncertainty about the outer year, and this bolsters our interest in seeking a larger arrangement.

Based on the above considerations, we would like to make a request for a two-year FCL arrangement in the amount of SDR 3.87 billion (500 percent of quota). As we are confident that Colombia is well prepared to deal with the current external environment, we intend to treat the arrangement as precautionary. We request that immediately prior to the approval of this new FCL arrangement, the existing one be cancelled.

Our strong macroeconomic policies and solid institutional framework have allowed our country to maintain a comfortable external position with greatly reduced external vulnerabilities despite the global crisis. Our sovereign debt has been upgraded recently to investment grade by a major rating agency, remains relatively low, and our fiscal policy has been framed in the context of medium-term consolidation that we expect to be anchored by a fiscal rule (currently being debated in our Congress) that would limit the structural deficit of the central government to 2 percent of GDP starting in 2015.

A flexible exchange rate has served us well as an effective shock absorber, including in the current environment of strong private capital inflows. Our monetary policy framework, based on an inflation targeting regime, has helped us attain our long-term inflation range target (2–4 percent) since 2009 and has contributed to anchoring inflation expectations. Consistent with this commitment to low inflation, the Banco de la República has raised its policy rate 50 basis points in 2011 in anticipation of future price pressures. International reserve coverage in terms of imports, short-term debt and the money stock remains comfortable. As in the case of the public debt, the external debt-to-GDP ratio is relatively low and sustainable.

Our financial supervisory and regulatory framework is strong and banks remain healthy, liquid and profitable. The ratio of capital to risk-weighted assets for the banking system is well above requirements, and provisioning levels are very high. At the same time, bank credit to the private sector is recovering and is an important component of support to the economic recovery.

Overall, our track record of prudent macroeconomic policies and our very strong institutional framework provide ample assurances of our ability to withstand adverse shocks and signal our resolute commitment to maintain sound policies in the future and to continue to react as needed if further shocks were to materialize. Let us take this opportunity also to mention that the Banco de la República will continue providing Fund staff with all needed information, and that we have sent the requested authorizations to the bank's external auditors, in accordance with the safeguards policy for the FCL.

Our expectation is that the arrangement will continue bolstering confidence that Colombia is in a position to withstand a wide range of adverse external shocks. We fully concur with the views expressed by the Fund's Executive Board during the last Article IV consultation, namely, that Colombia is well placed to confront the challenges posed by a still uncertain global outlook.

Sincerely yours,

/s/

José Darío Uribe
Governor
Central Bank of Colombia
