0422

EBD/93/140

August 26, 1993

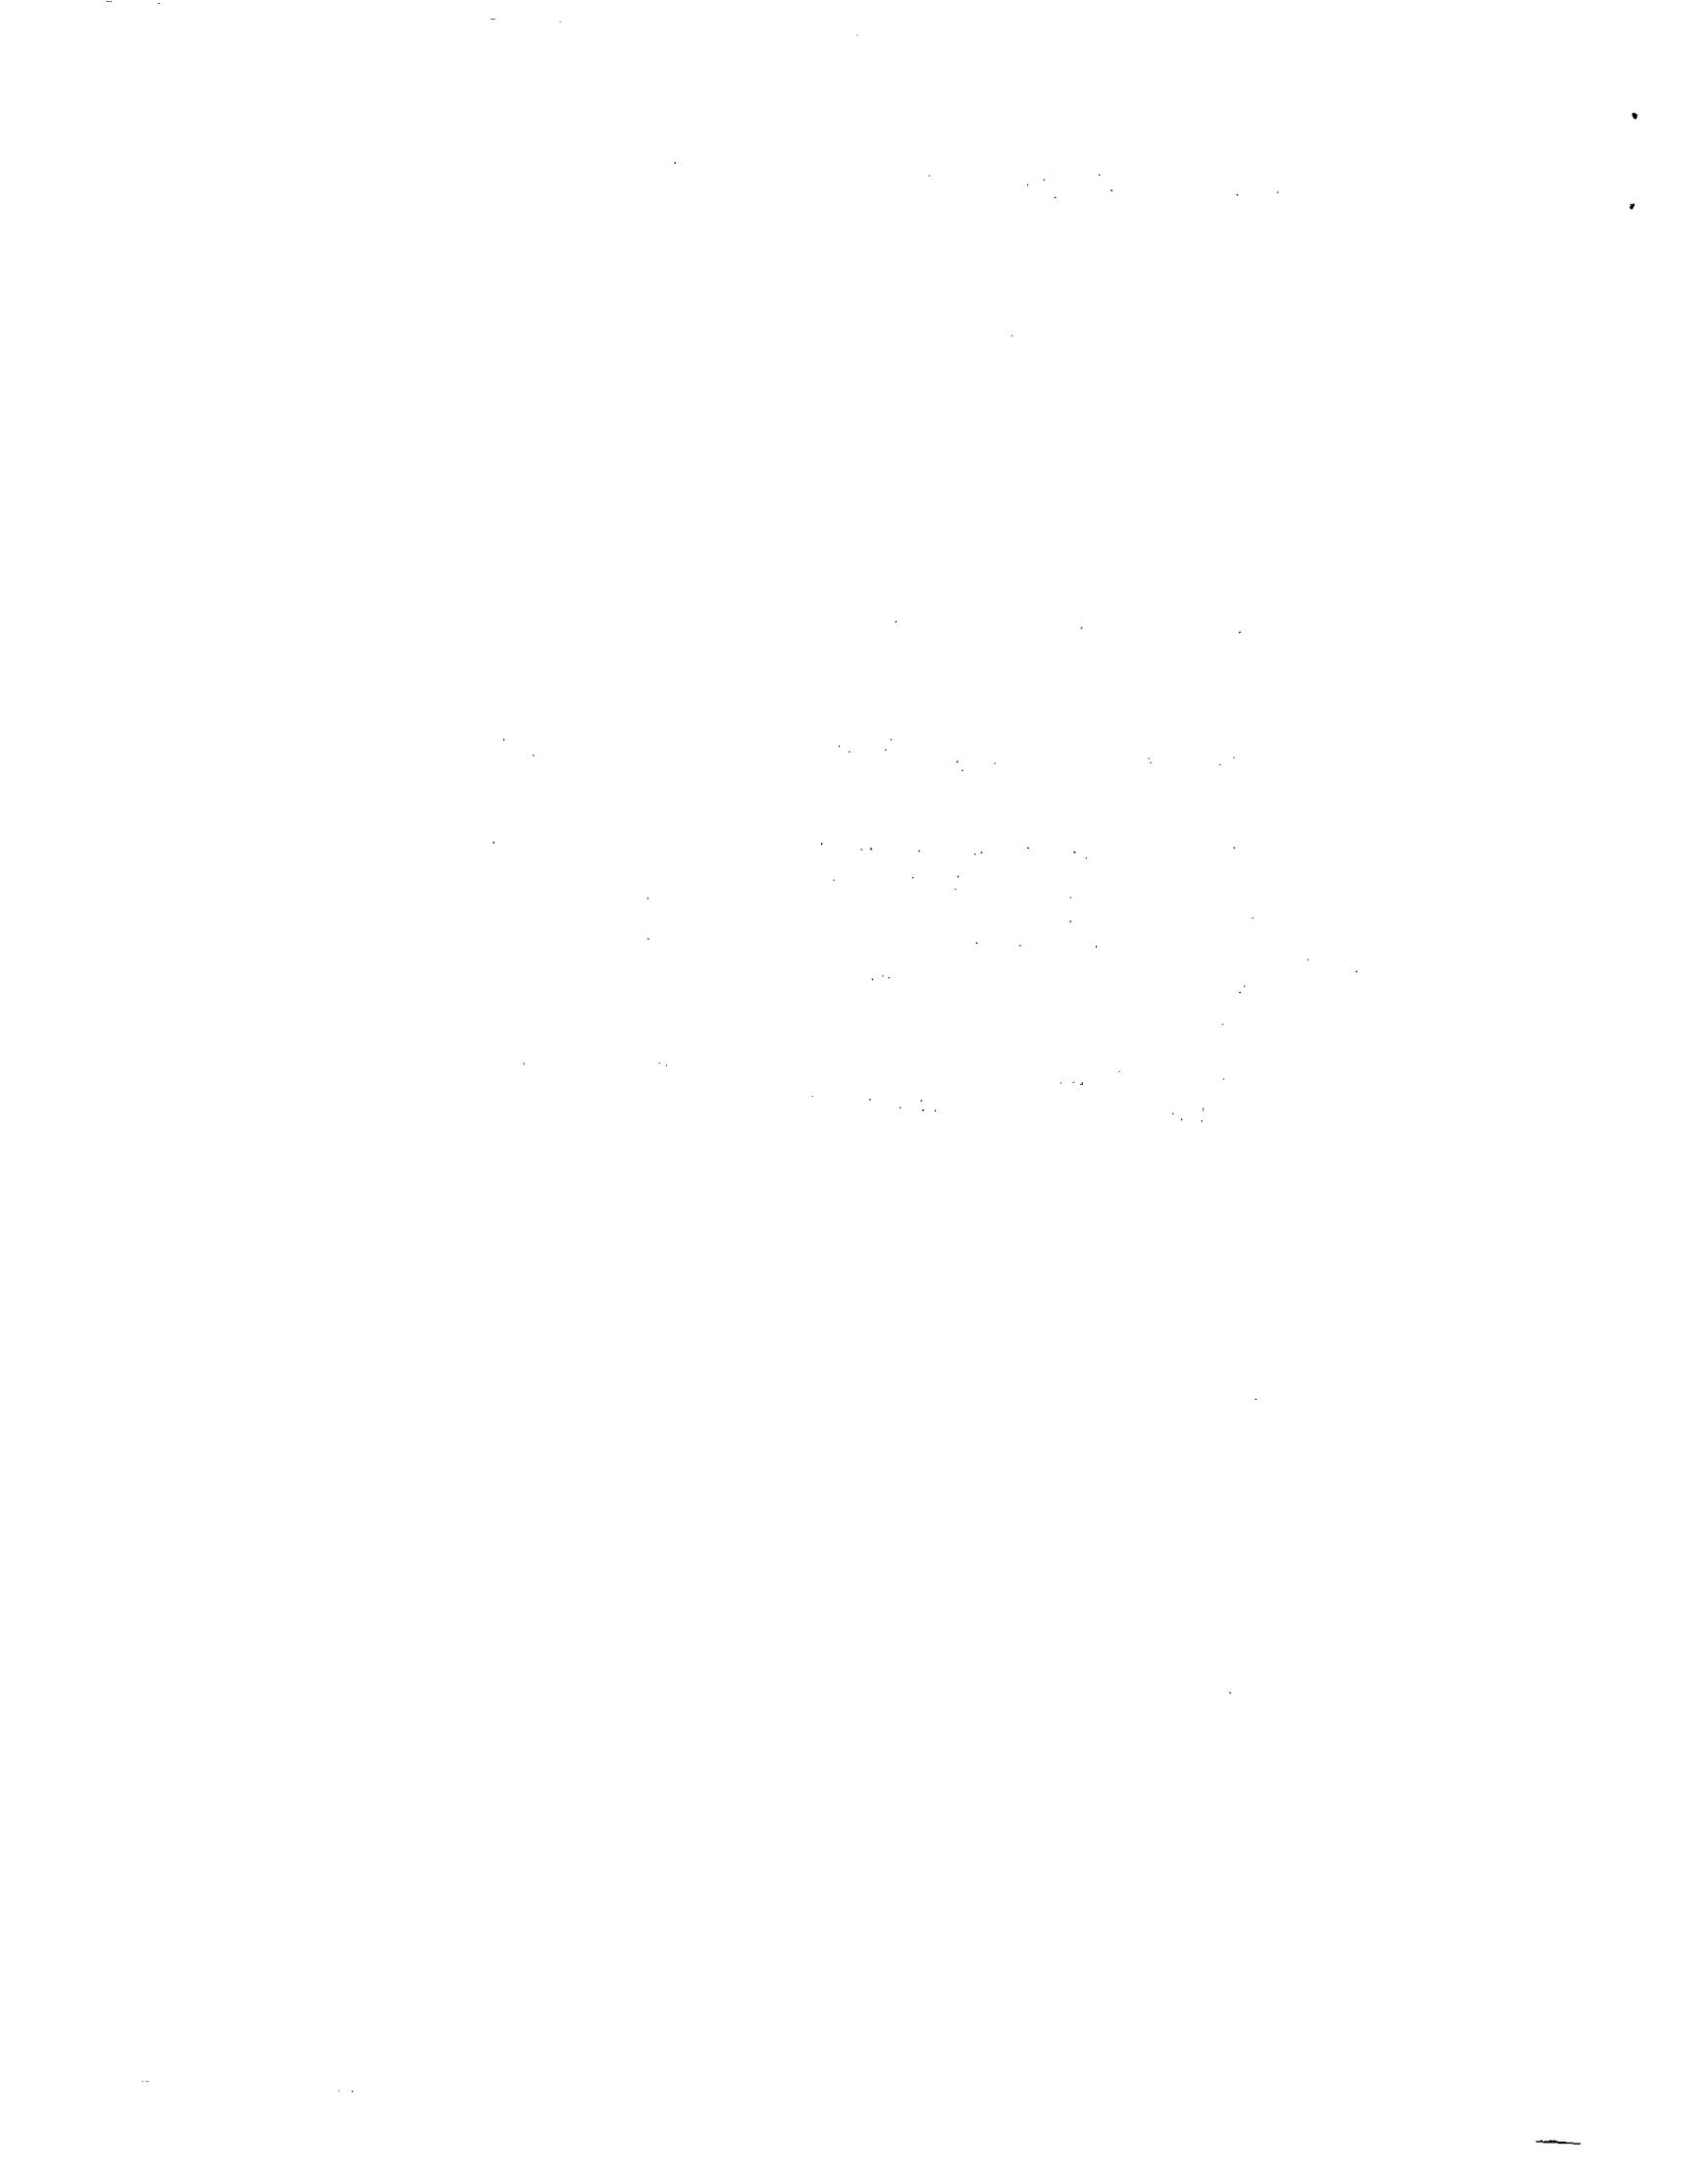

To: Members of the Executive Board  
From: The Secretary  
Subject: Background Material on World Economic and Market Developments

The attached package of charts and tables is intended to serve as background material for the informal discussion on world economic and market developments, scheduled for Wednesday, September 1, 1993 in conjunction with the World Economic Outlook. A brief list of issues on which Executive Directors may wish to comment is included at the front of the package.

Mr. R. Feldman (ext. 36317) is available to answer technical questions relating to the attached material.

Att: (1)

Other Distribution:  
Department Heads

### Issues for Comment

The upcoming session on World Economic and Market Developments (WEMD) is being held in conjunction with the Executive Board's consideration of the World Economic Outlook. Chapter 1, pages 13-14, of the "World Economic Outlook - Prospects and Policy Issues" (EBS/93/124, 8/6/93) contains several issues for discussion which Directors may wish to address in this combined meeting. Directors may also wish to consider the following issues for comment.

1. With reference to the WEO Supplement "A Preliminary Assessment of Recent Changes in the European Exchange Rate Mechanism":

a. How do Directors evaluate the causes underlying the recent pressures in the European Exchange Rate Mechanism that led to the widening of the bands around central parities?

b. Given the widening of these bands and therefore the increased latitude to pursue more flexible monetary policies, what are Directors' views on how this increased "room to maneuver" should be used?

2. Long-term interest rates have declined significantly in the industrial countries over the past two years, a trend that has accelerated in recent weeks. What do Directors consider to be the main factors behind these movements and what, if any, might be the policy implications? There seems to be a fairly broad perception that short-term interest rates will come down in Europe, a perception that must be reflected in current exchange rates (Supplementary Table 1 and Chart 4). In the view of Directors, what would be the appropriate magnitude and timing of such declines, taking into account the likely effects on exchange rates?

3. The Japanese yen has strengthened significantly, recently hitting record highs against both the U.S. currency in approaching Y 100 per U.S. dollar, and against the deutsche mark. Directors may wish to comment on the recent movements in the yen and their likely effects. In response to the yen's rise, the Bank of Japan has reportedly been intervening frequently. In addition, in the third week of August, the U.S. authorities indicated that United States was concerned that the rapid rise in the value of the yen could retard growth in the Japanese and world economies, and intervened in large amounts to support the dollar. What are Directors' views on such actions, and what, if any, other measures might be usefully employed to influence the foreign exchange value of the yen?

Supplementary Table 1  
 Short-Term Interest Rates Projected by  
 Private Forecasters 1/

	Current rate <u>2/</u>	In 3 months	In 12 months
Germany	6.7	6.5	5.2
France	7.8	6.2	4.9
U.K.	5.8	5.5	5.8
Italy	9.9	9.2	8.5
Japan	3.2	3.0	3.2
U.S.	3.1	3.2	3.7
Canada	4.1	4.2	4.7

1/ Source: Consensus Forecasts, survey date August 2, 1993.  
 Interest rates are: 3-month euro-rates (Germany and France);  
 3-month interbank rate (U.K.); 3-month Treasury bill rates  
 (Italy, U.S., and Canada), and 3-month CD rate (Japan).

2/ On survey date.

Europe 2/	3.4	3.6	3.3	3.5

1/ GNP for Japan; GDP for all other countries.

2/ West Germany, France, U.K., and Italy; based on PPP weights in the May 1993 WEO.

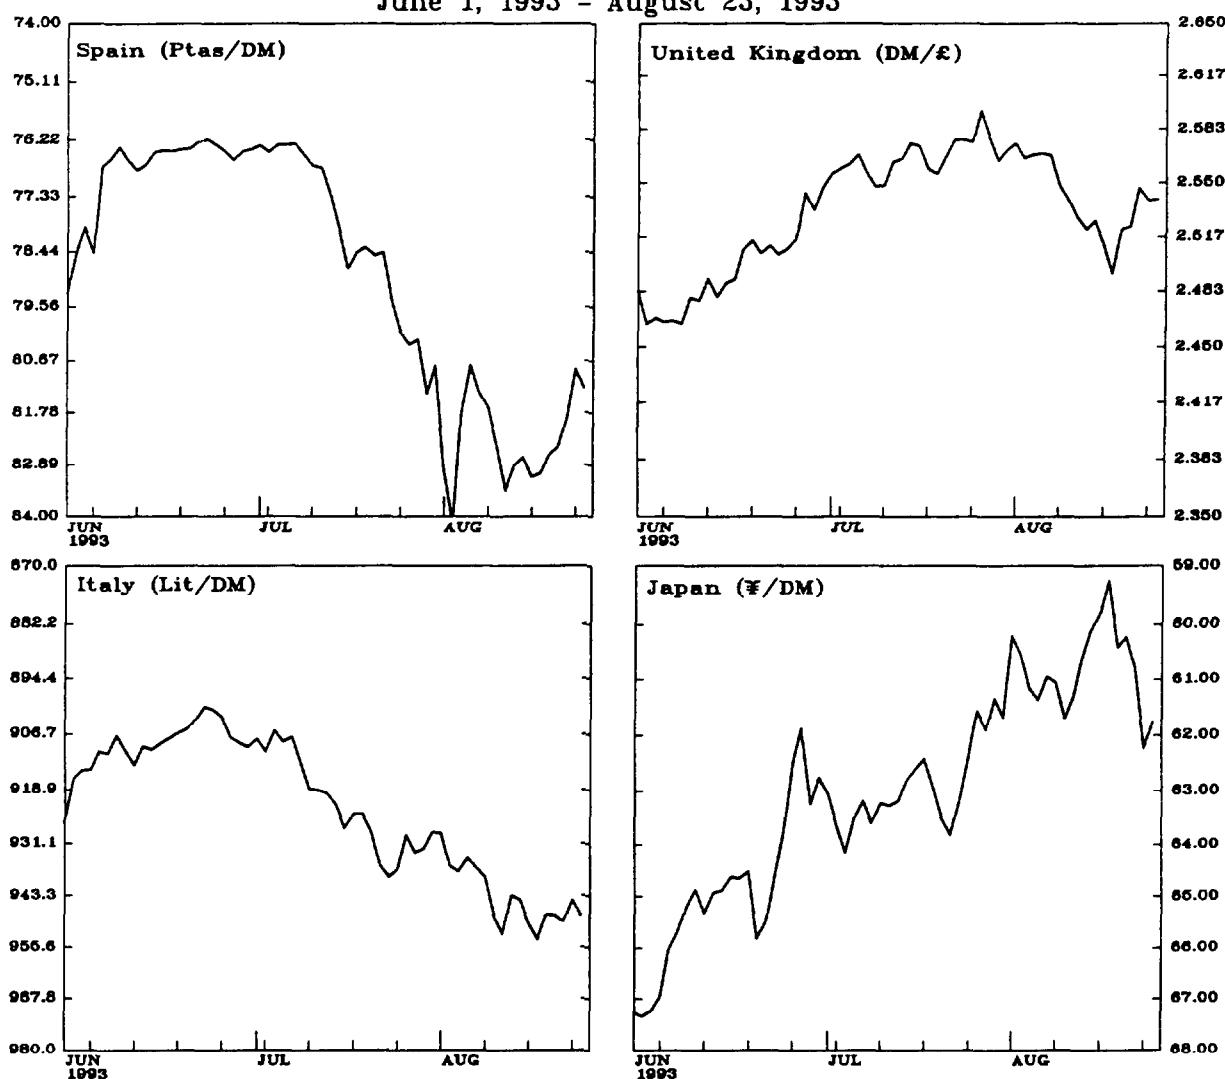

Supplementary Chart 1.  
 Bilateral Exchange Rates Vis-à-vis Deutsche Mark<sup>1</sup>  
 June 1, 1993 - August 23, 1993

<sup>1</sup> Daily data, based on noon quotations in London.

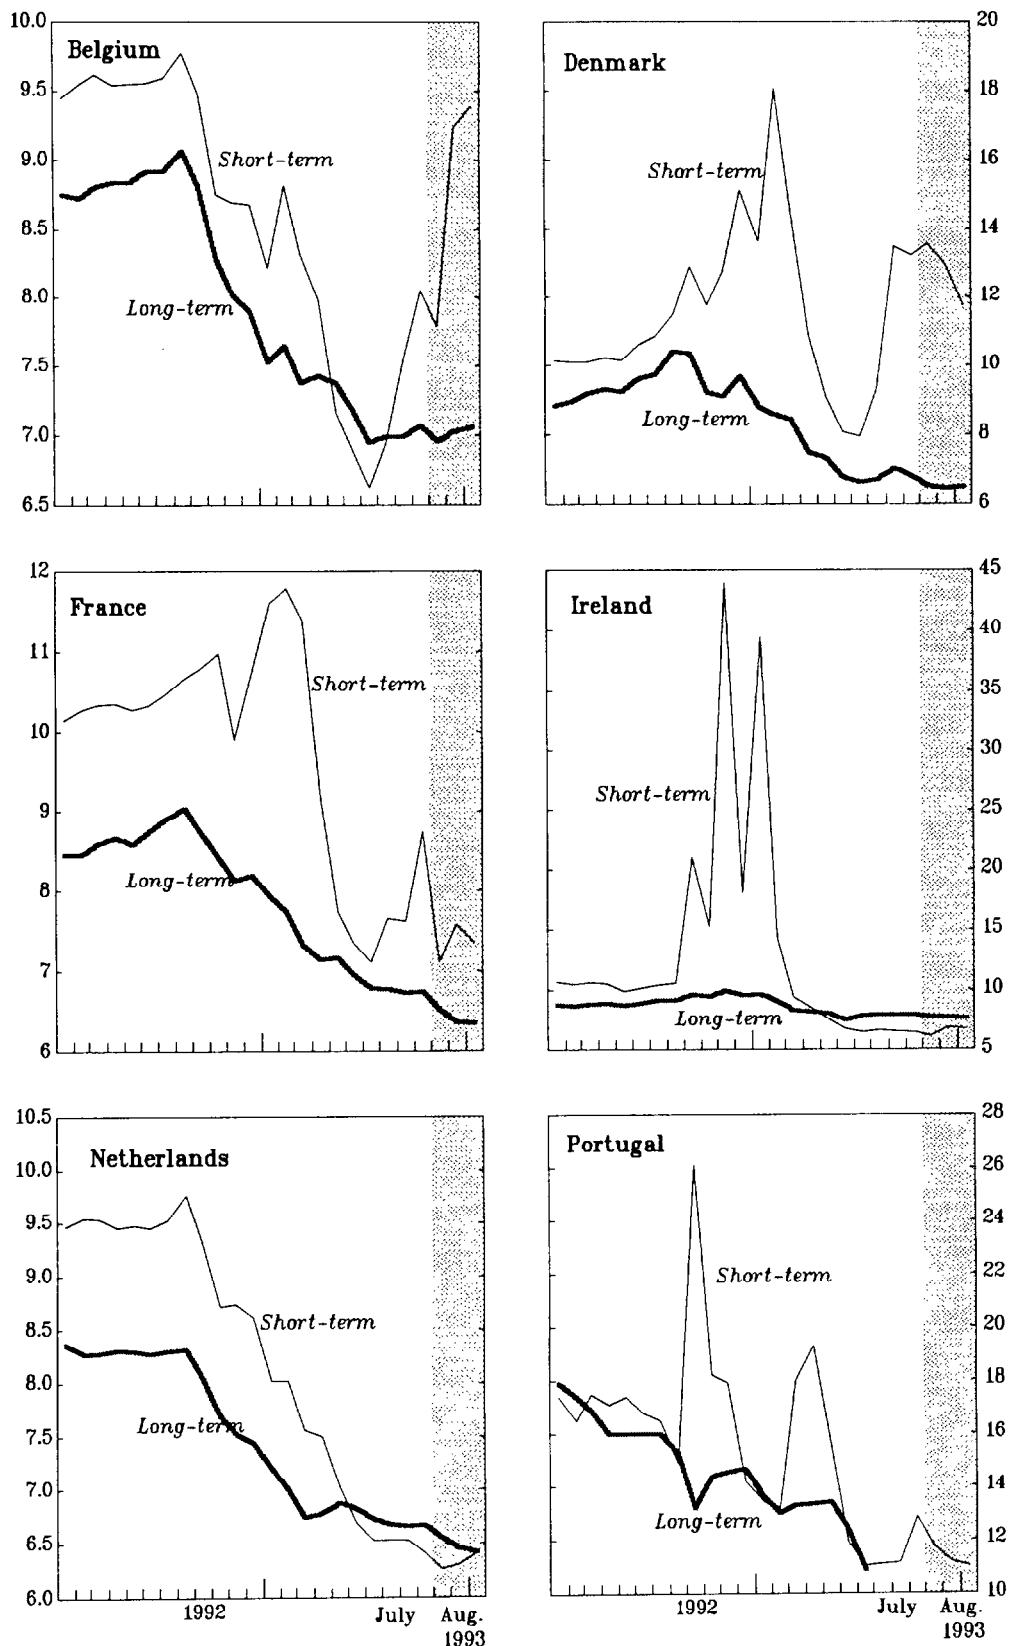

Supplementary Chart 1. (concluded)  
Bilateral Exchange Rates Vis-à-vis Deutsche Mark<sup>1</sup>  
June 1, 1993 - August 23, 1993

<sup>1</sup> Daily data, based on noon quotations in London.

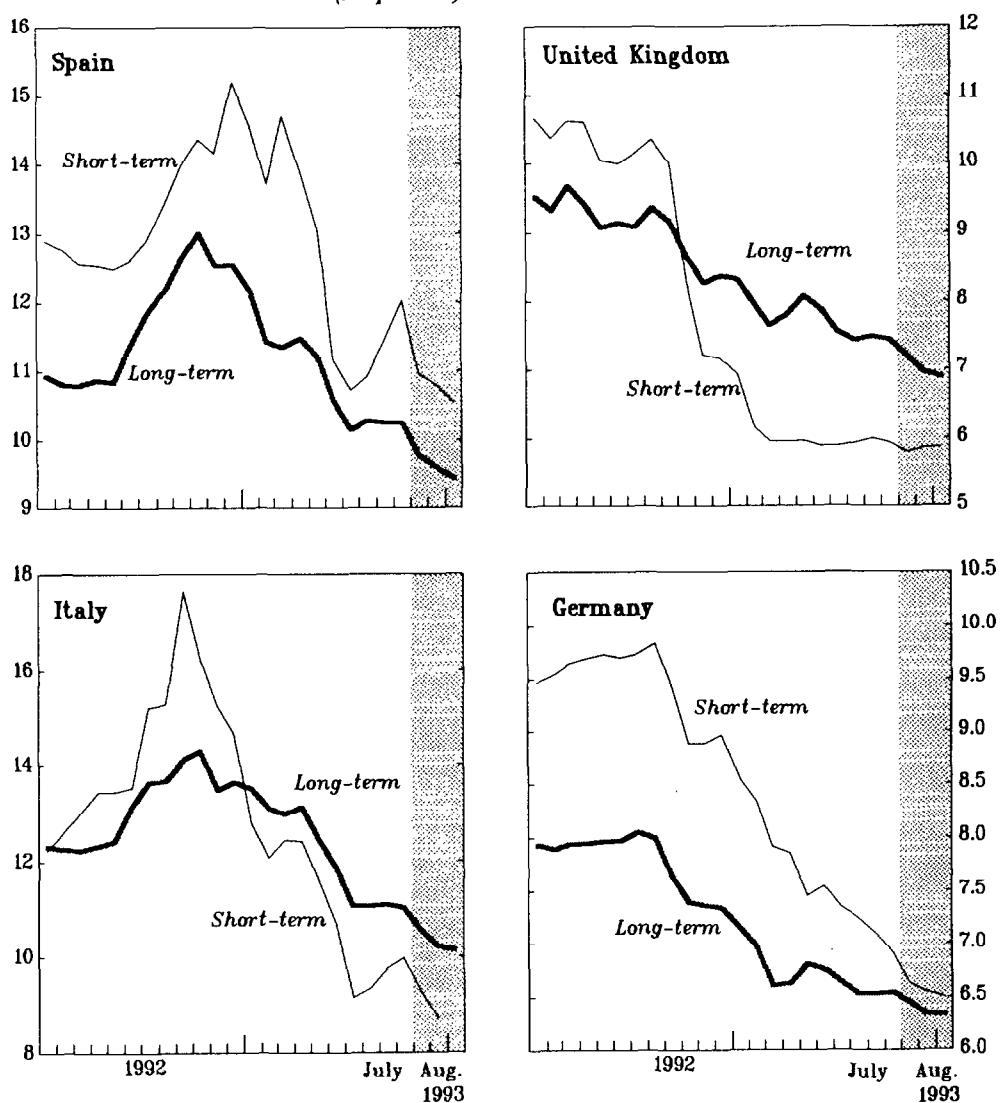

Supplementary Chart 2.  
 Short-Term and Long-Term Interest Rates <sup>1</sup>  
 January 1992-August 1993  
*(In percent)*

<sup>1</sup> Monthly data through June 1993; weekly averages thereafter. Shaded area indicates the month of August.

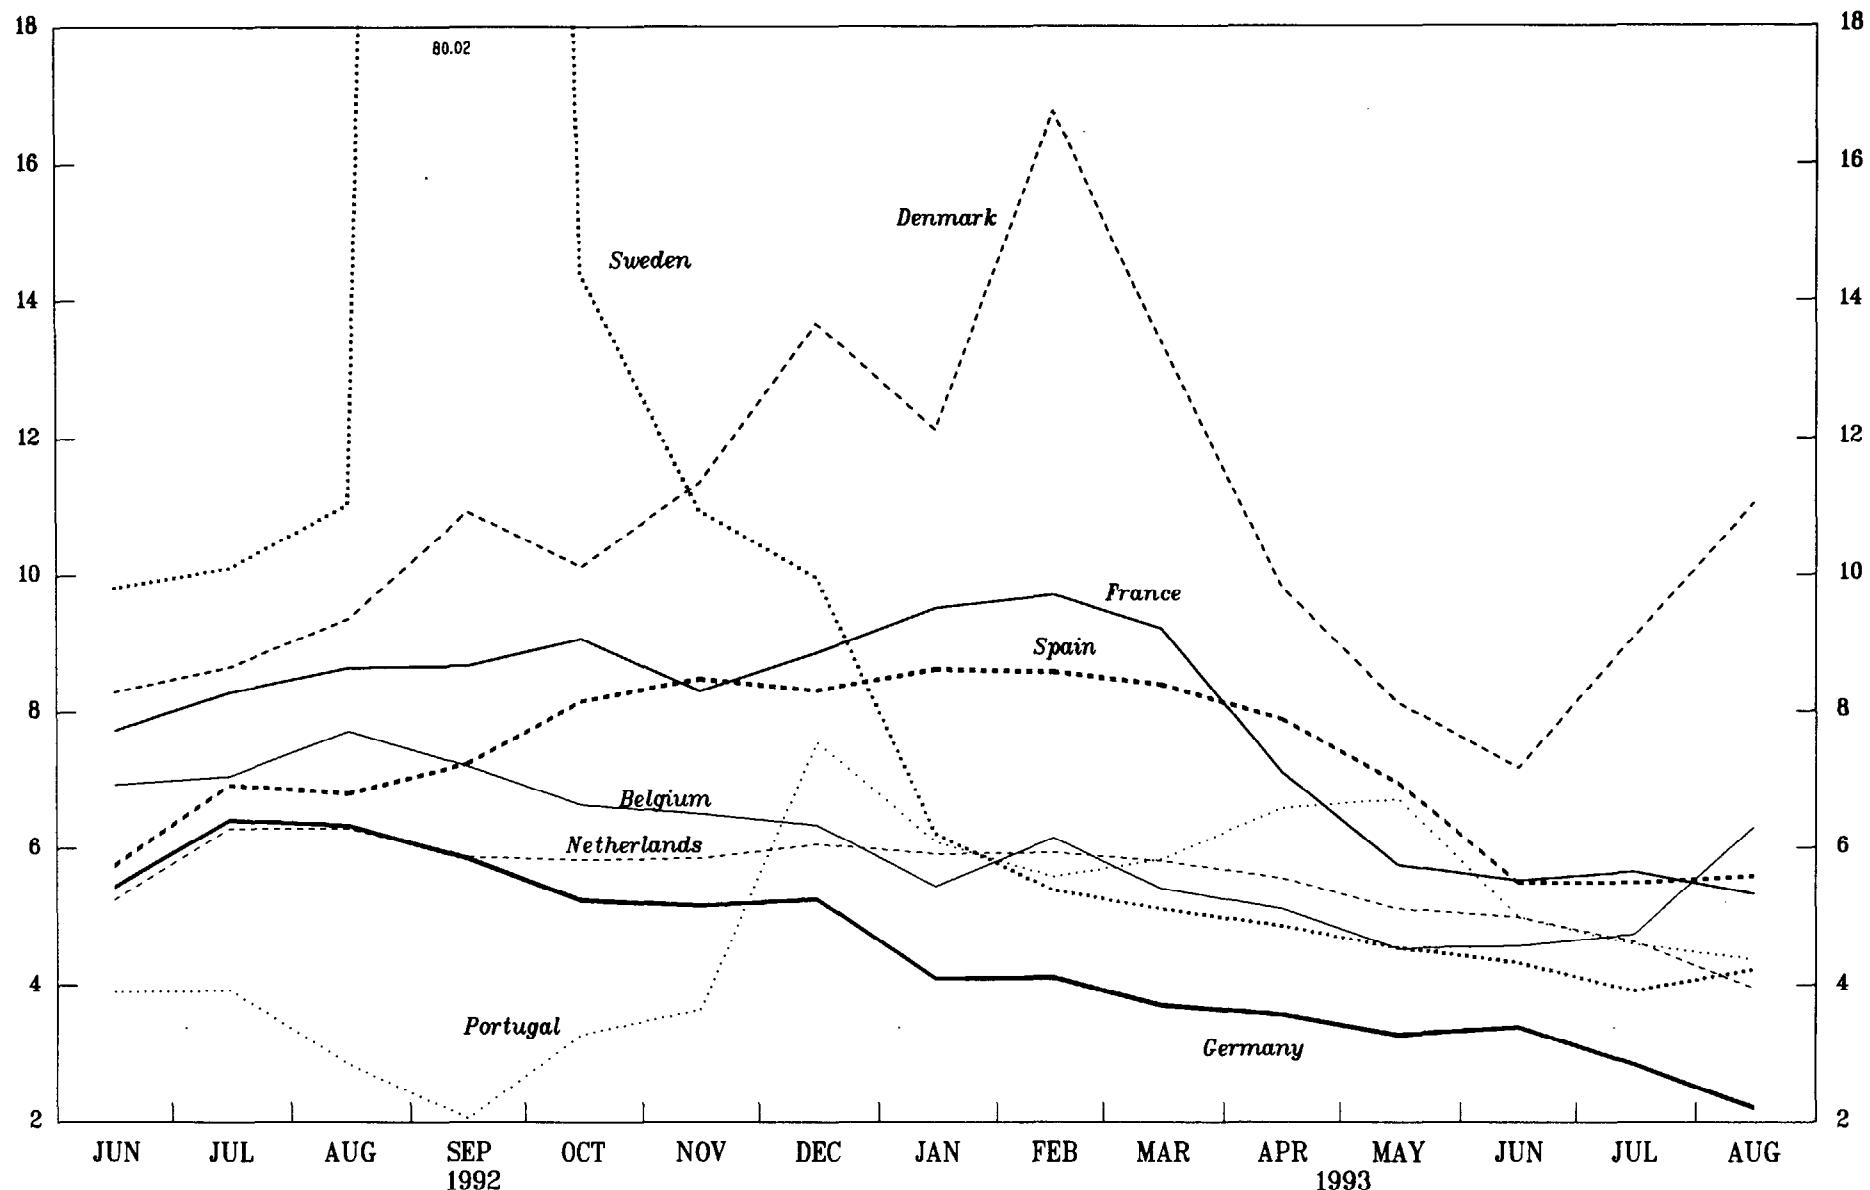

Supplementary Chart 2. (concluded)  
**Short-Term and Long-Term Interest Rates<sup>1</sup>**  
**January 1992-August 1993**  
*(In percent)*

<sup>1</sup> Monthly data through June 1993; weekly averages thereafter. Shaded area indicates the month of August.

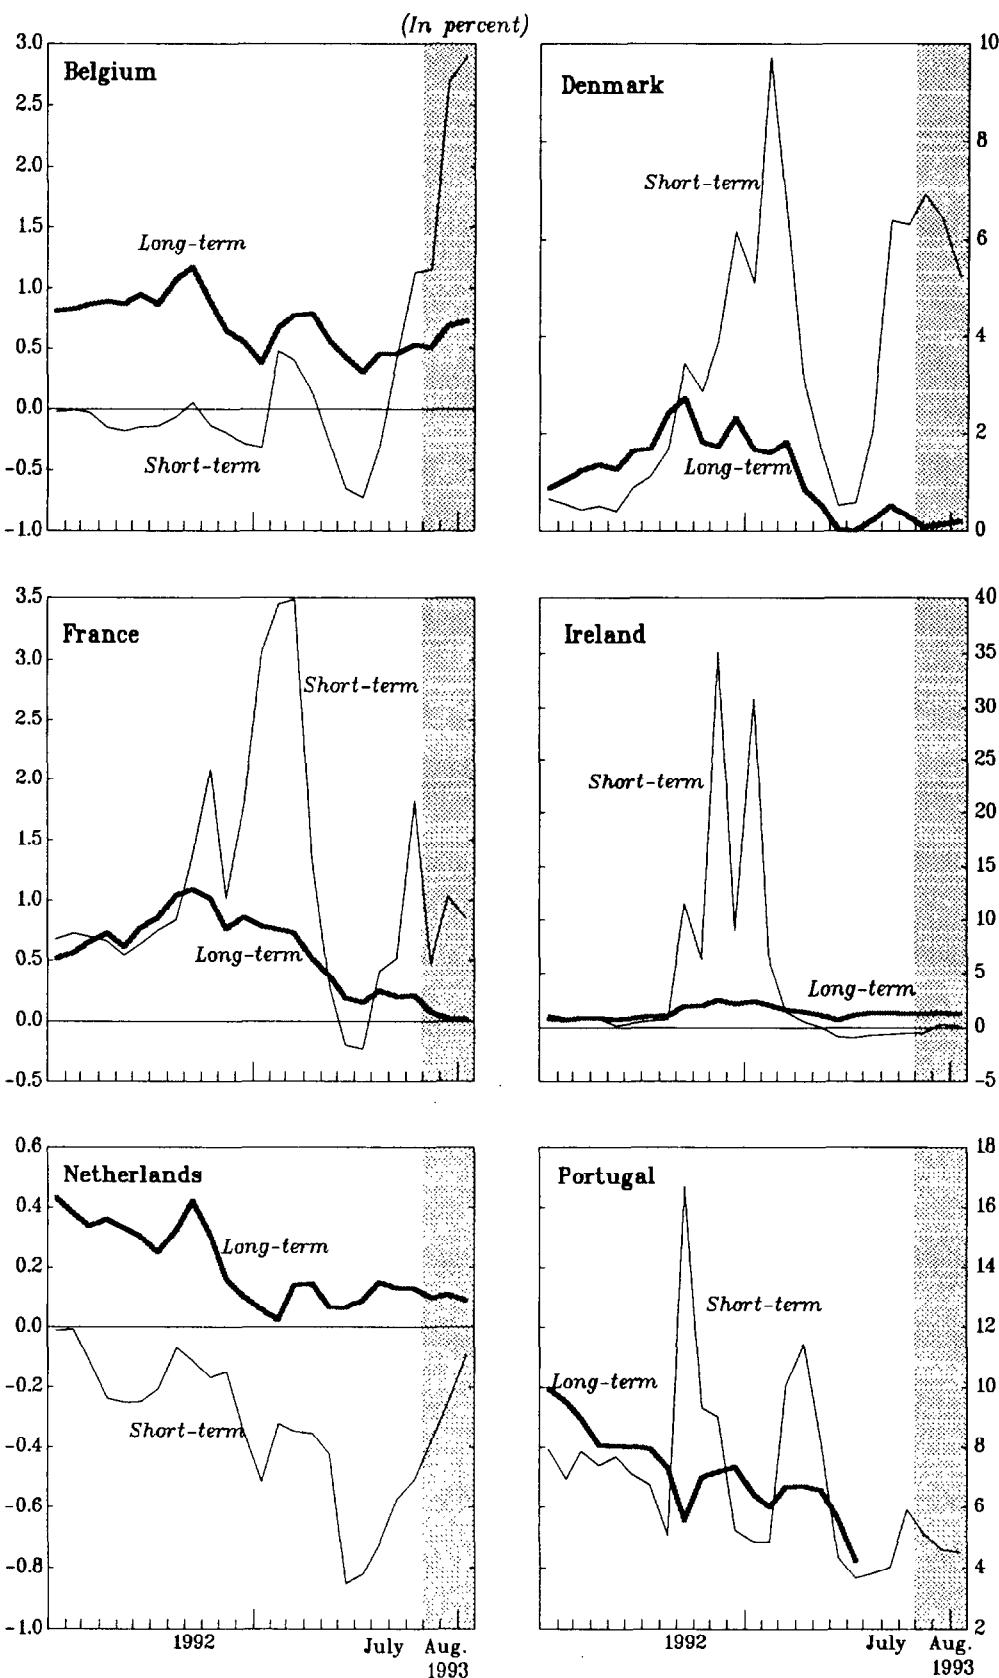

Supplementary Chart 3.  
Selected European Real Short-Term Interest Rates<sup>1</sup>

<sup>1</sup> Based on 12-month inflation rate using consumer prices.

Supplementary Chart 4.  
 Short-Term and Long-Term Differentials vis-à-vis Germany<sup>1</sup>  
 January 1992-August 1993

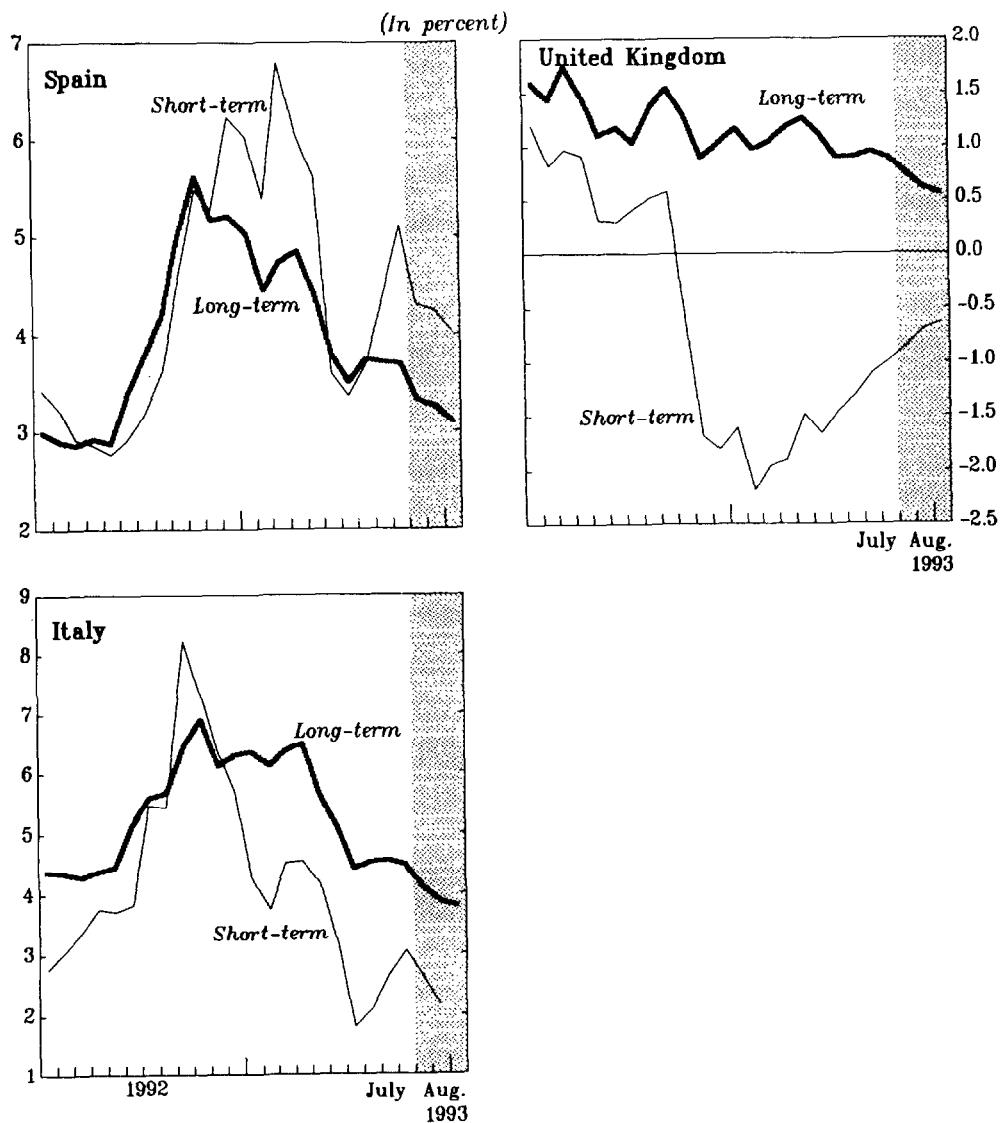

<sup>1</sup> Monthly data through June 1993; weekly averages thereafter. Shaded area indicates the month of August.

Supplementary Chart 4. (concluded)

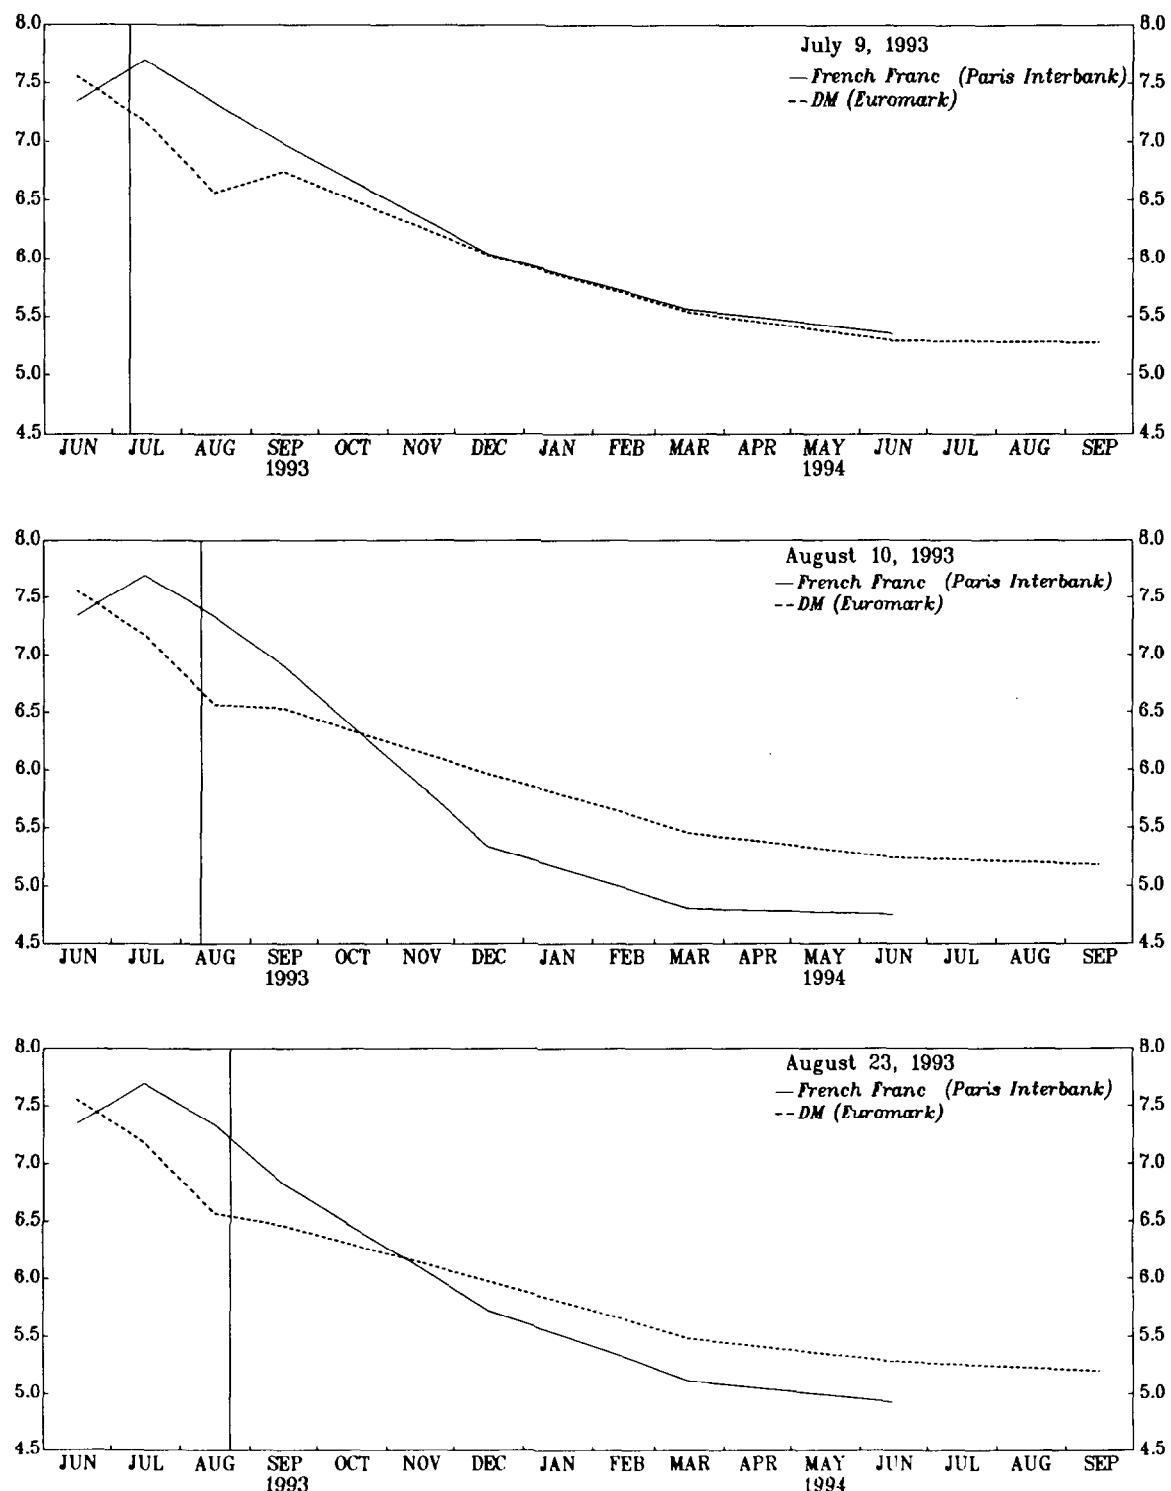

Short-Term and Long-Term Differentials vis-à-vis Germany<sup>1</sup>  
January 1992-August 1993

<sup>1</sup> Monthly data through June 1993; weekly averages thereafter. Shaded area indicates the month of August.

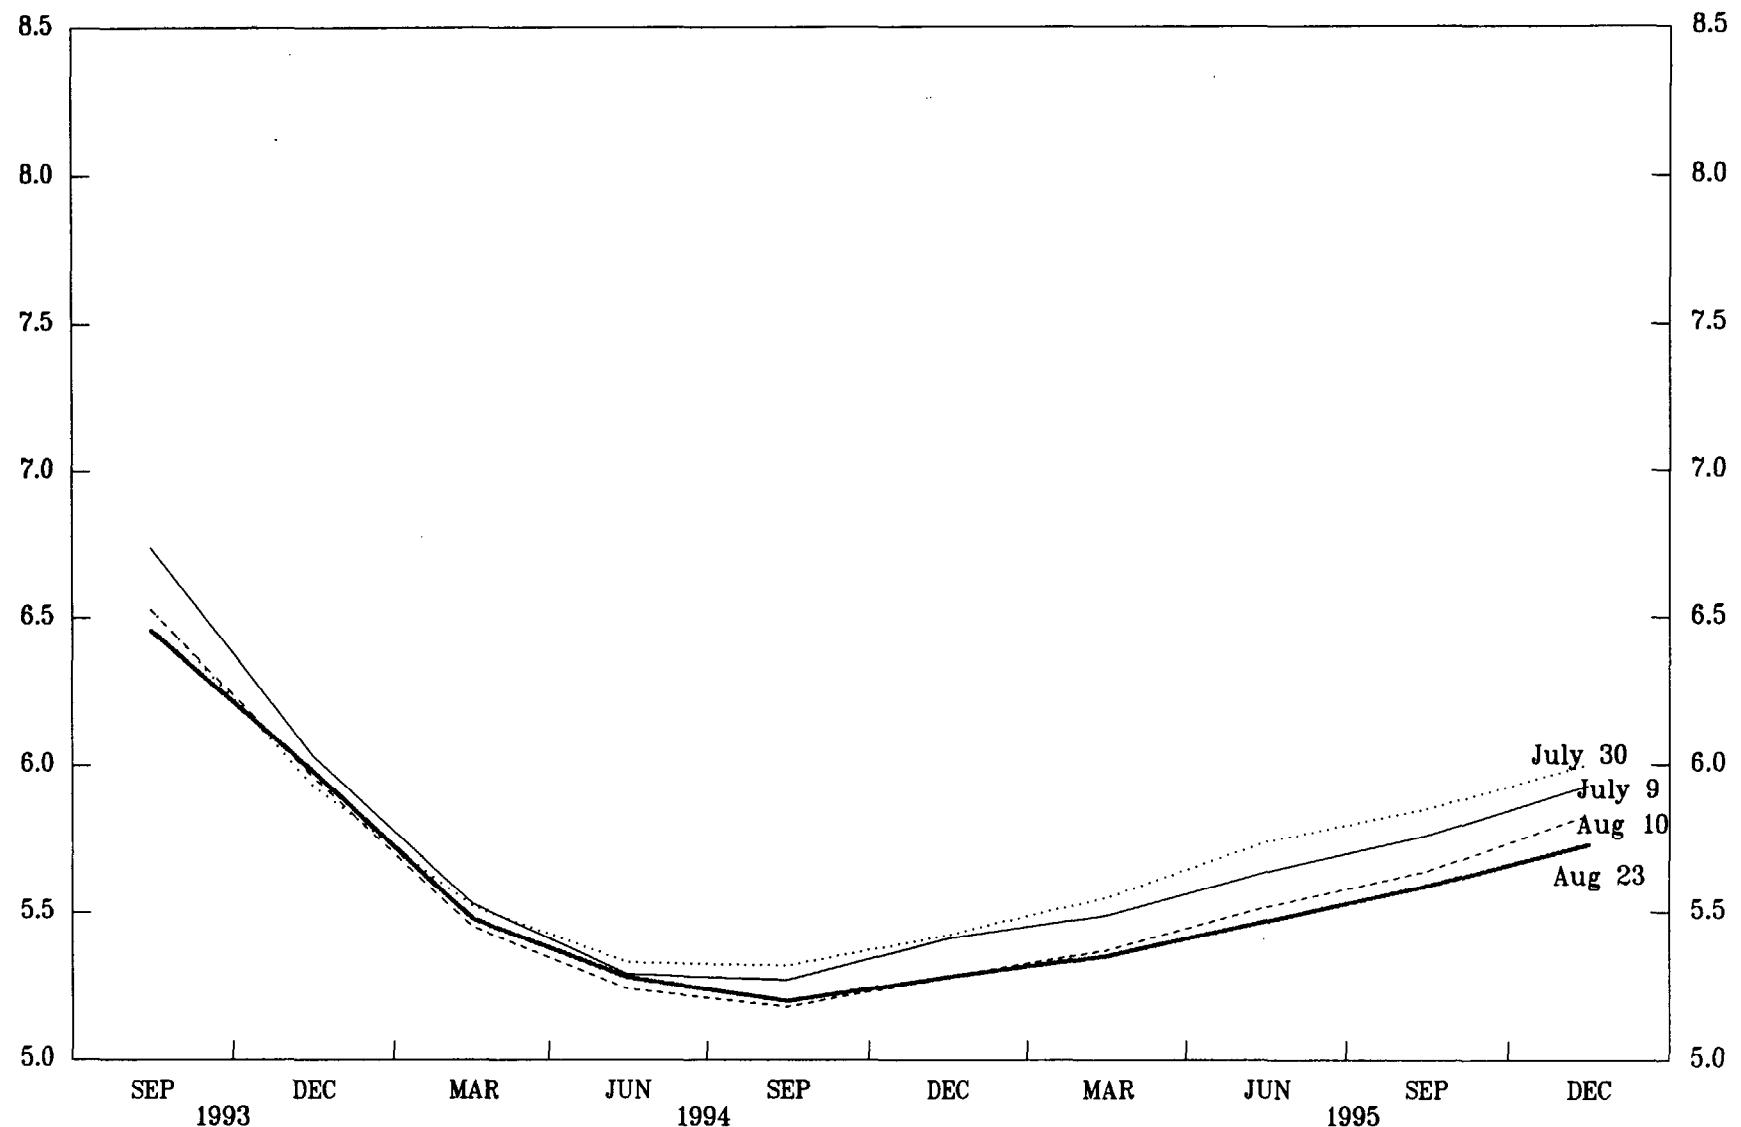

Supplementary Chart 5.  
Projected Franc and Mark Interest Rates Based on Futures Market Quotations

1 Data before quotation date are observed 3-month interbank rates.

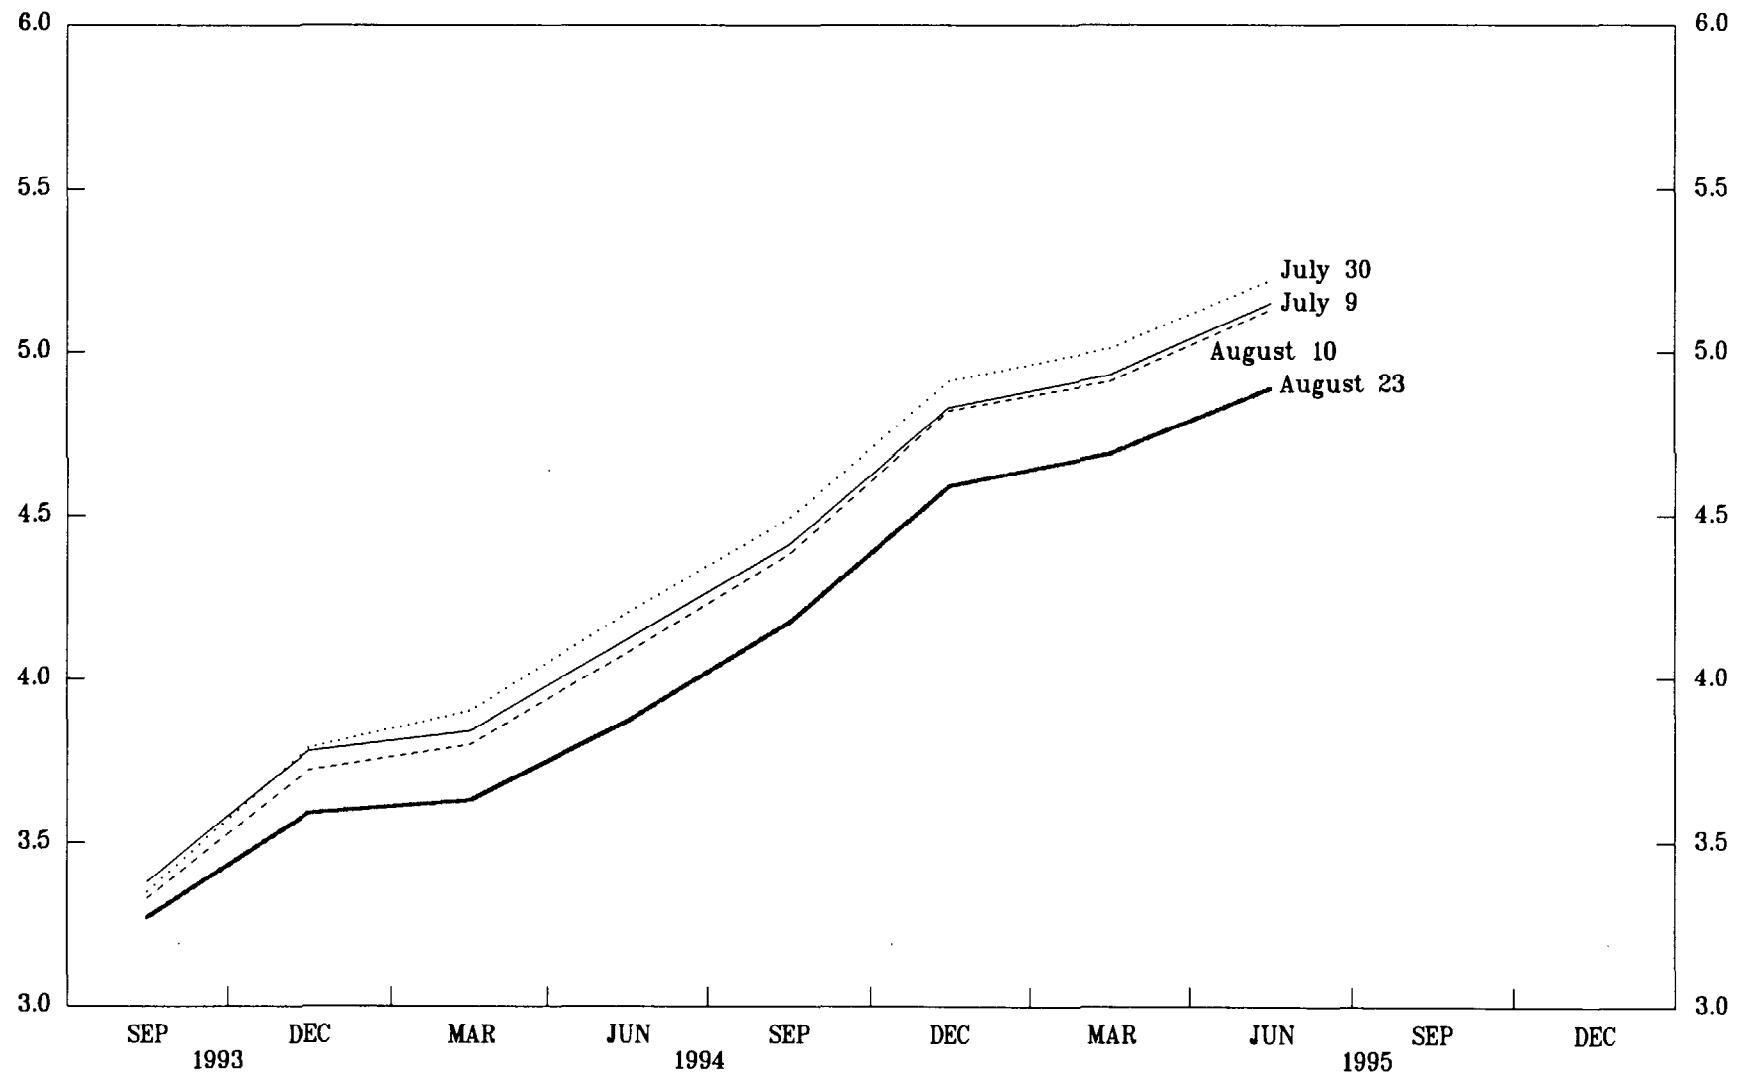

Supplementary Chart 6.  
Projected Deutsche Mark Interest Rates Based on Futures Market Quotations  
*(Three-month euro-rates in percent per annum)*

Supplementary Chart 7.  
Projected U.S. Dollar Interest Rates Based on Futures Market Quotations  
*(Three-month euro-rates in percent per annum)*

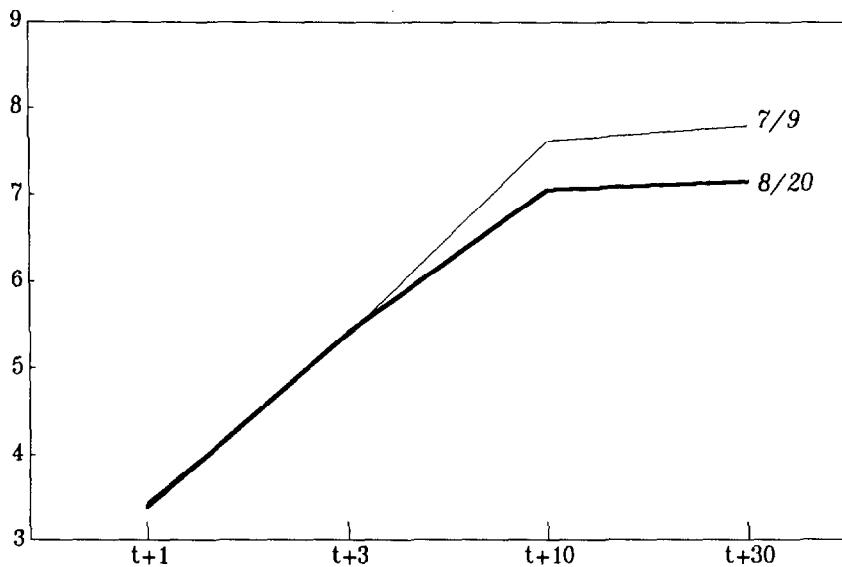

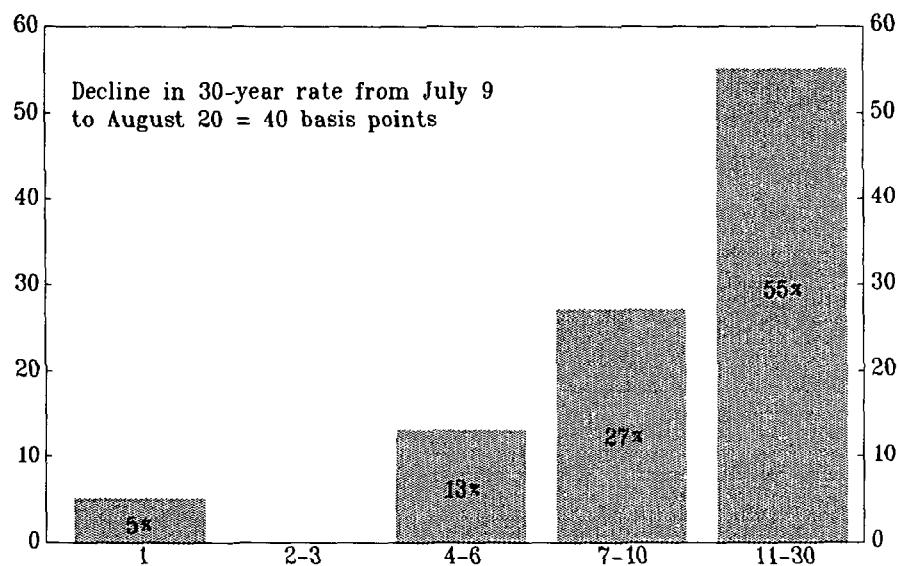

### Supplementary Chart 8

#### United States

**I. Projected One-year Interest Rates<sup>1</sup>**  
*(Percent per year)*

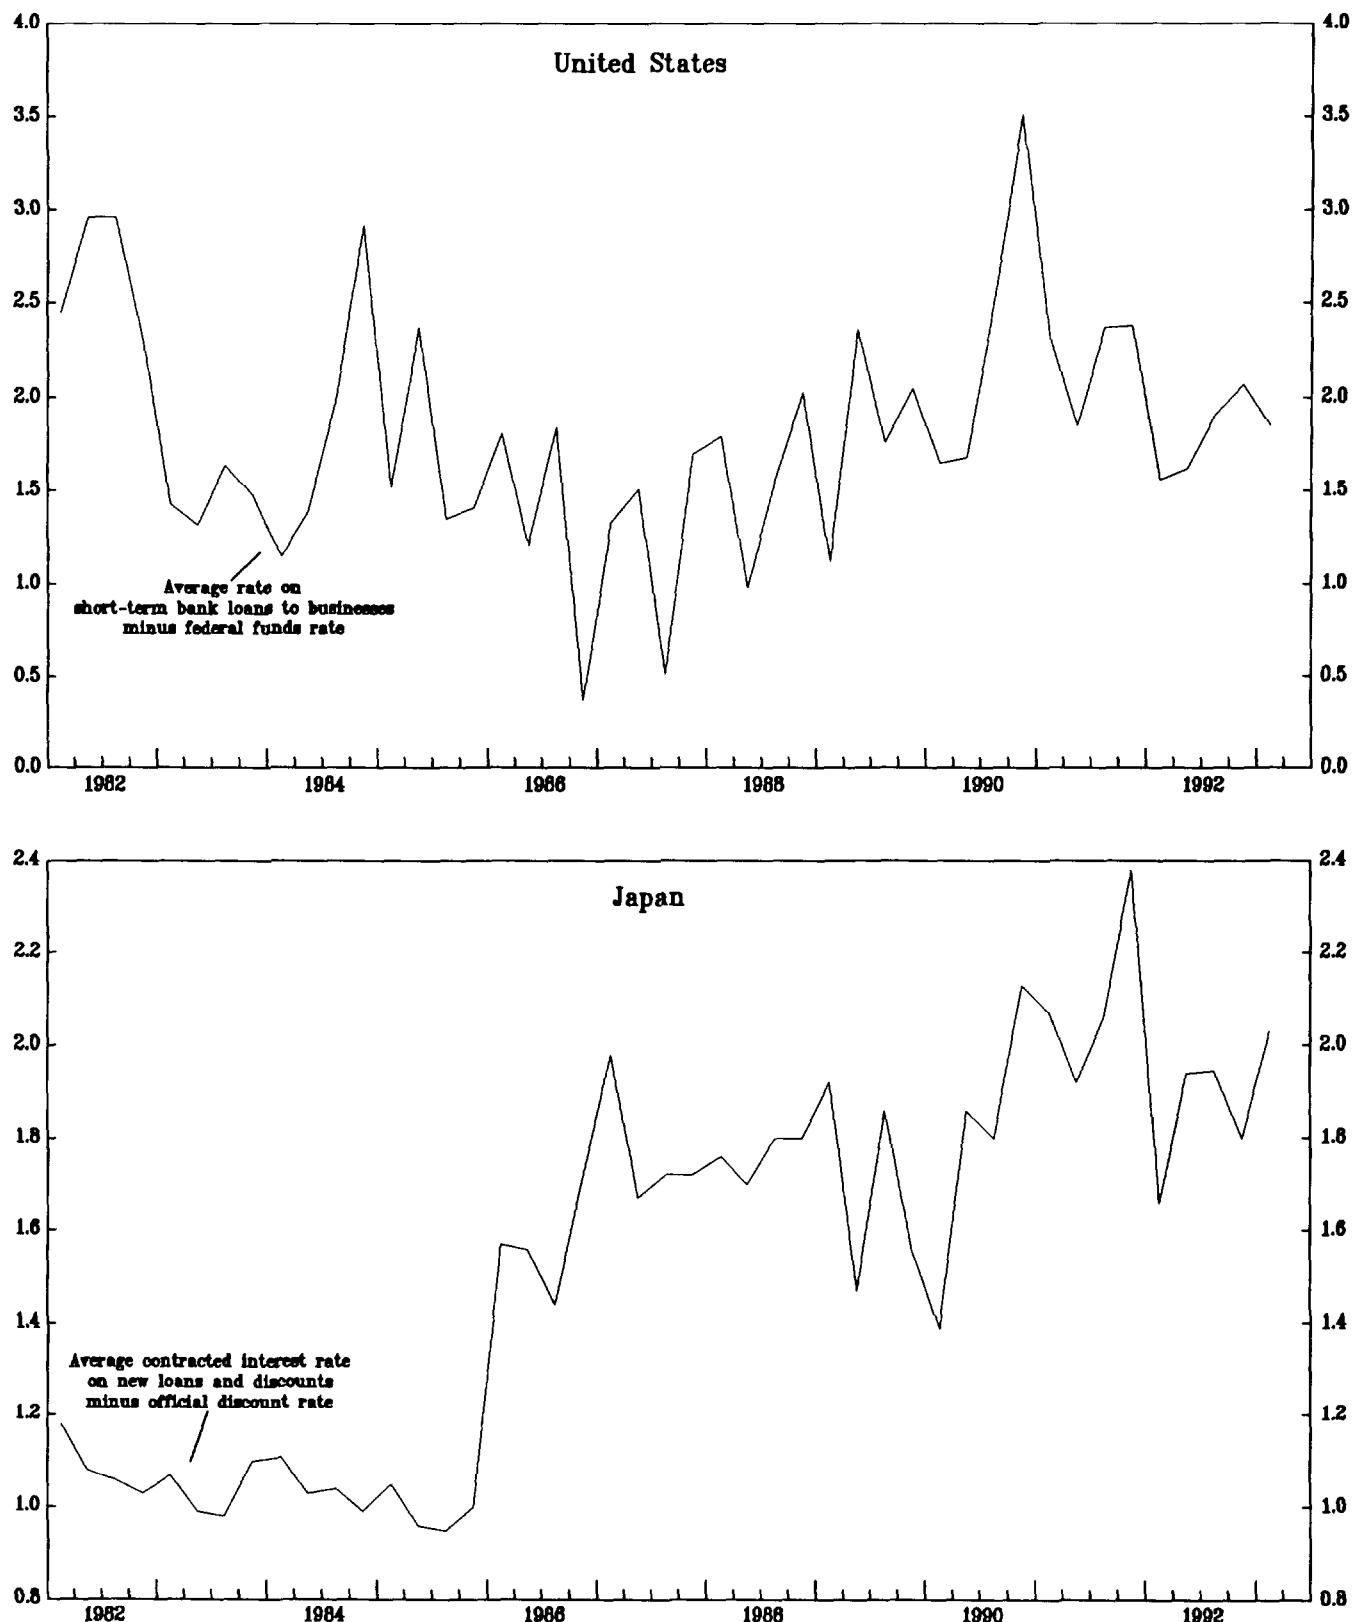

**II. Proportion of Reduction in 30-year Rate Attributable to a Reduction in Projected One-year Rates at Different Future Points in Time**  
*(In percent)*

<sup>1</sup>Weekly average data. As of the weeks ended July 9 and August 20, respectively, these rates are the one-year rates at different future points in time implied by a smoothed version of the U.S. Treasury yield curve.

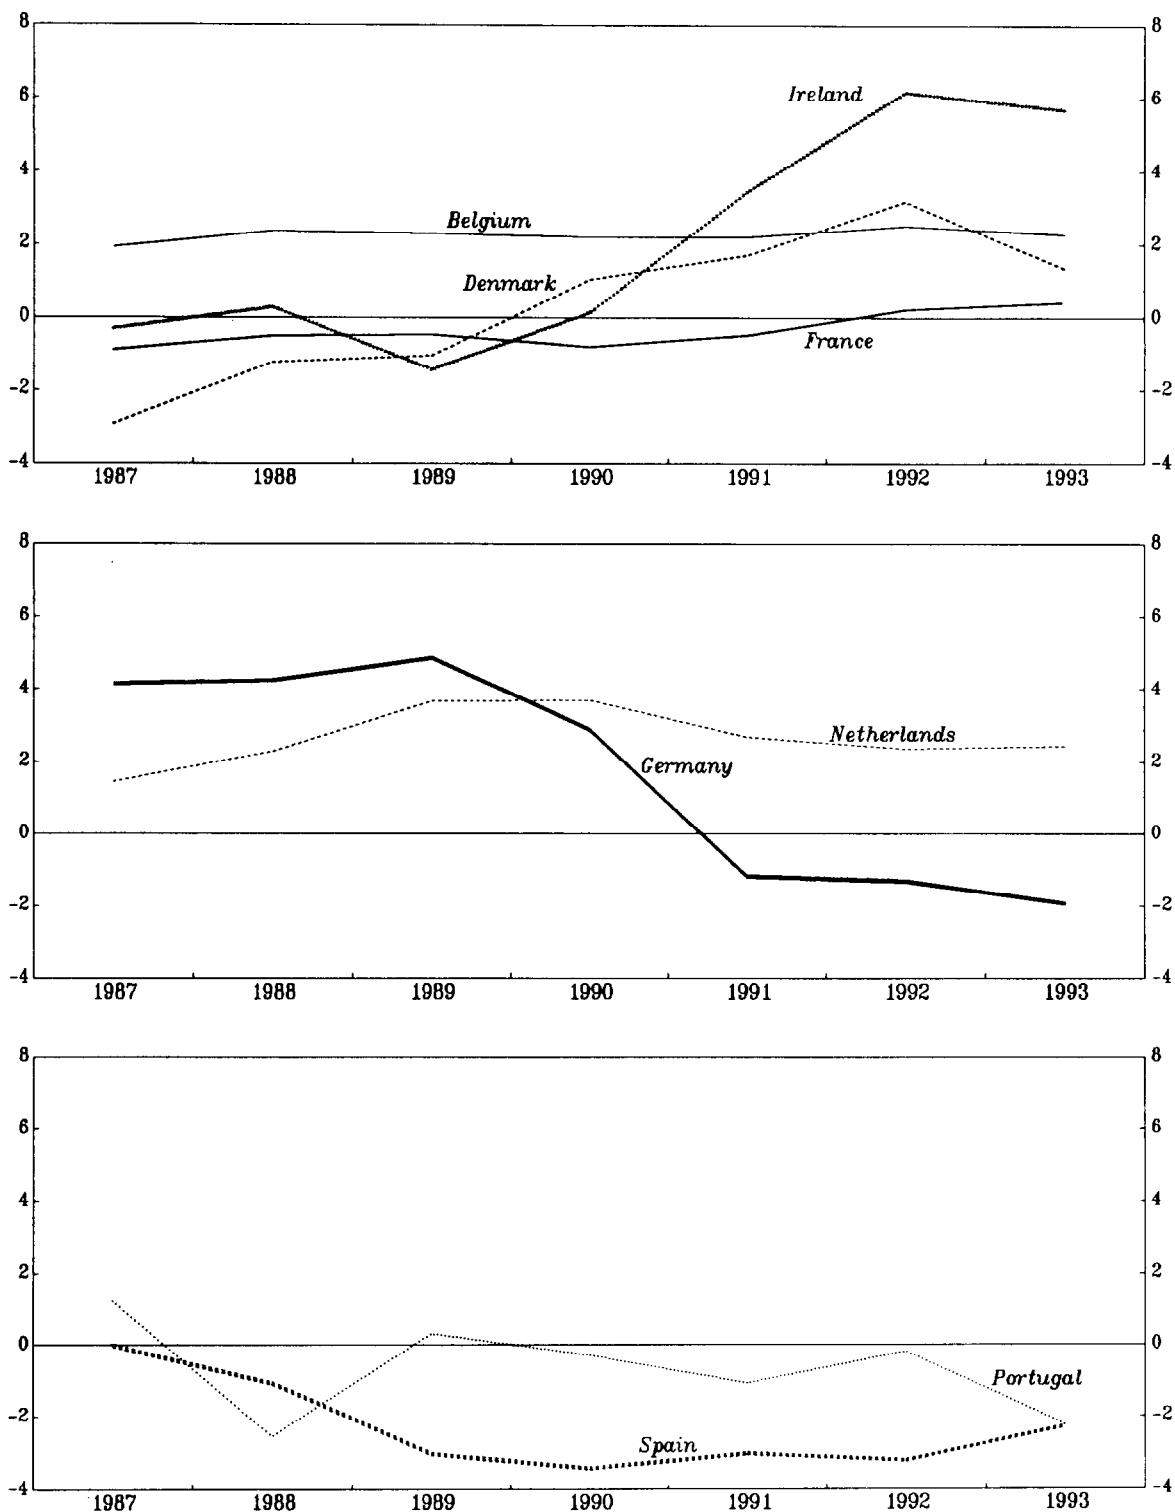

**Supplementary Chart 9**  
**Selected Interest Rate Spreads in the United States and Japan, 1982-93**  
 (In percent)

Sources: Bank of Japan, *Economic Statistics Monthly*; and Organization for Economic Cooperation and Development, *Financial Statistics Monthly*.

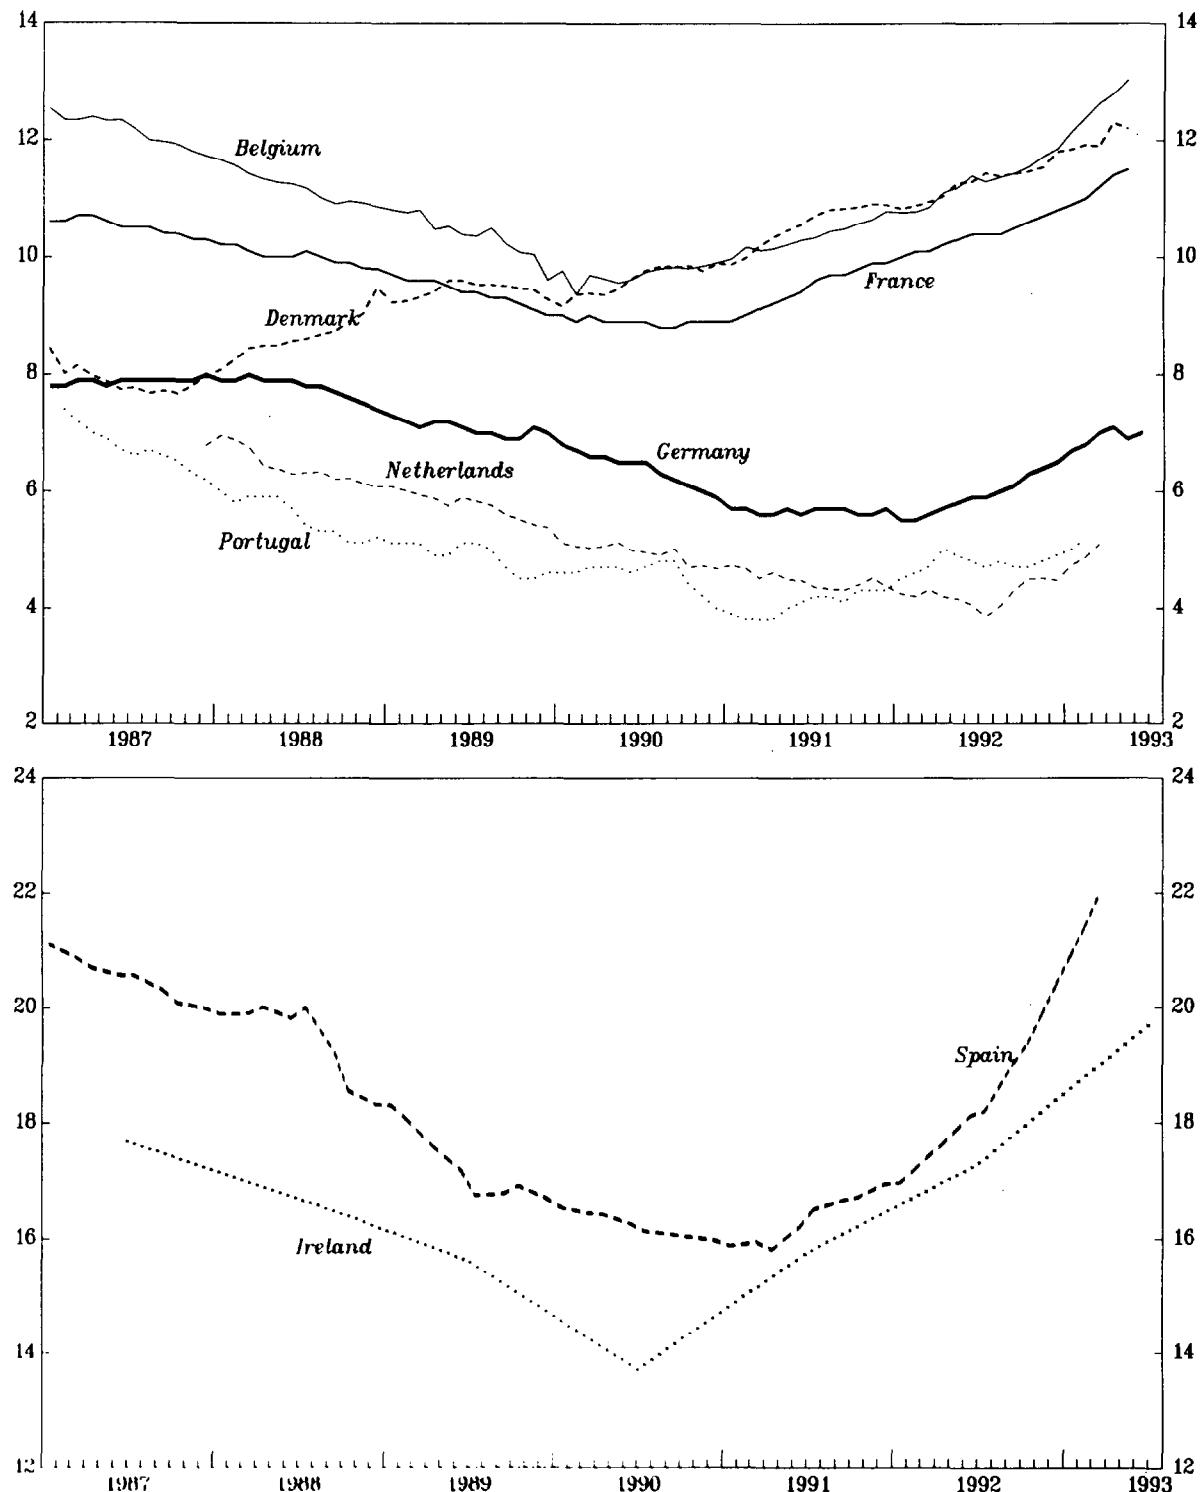

Supplementary Chart 10.  
ERM: Current Account Balance  
(In percent of GDP)

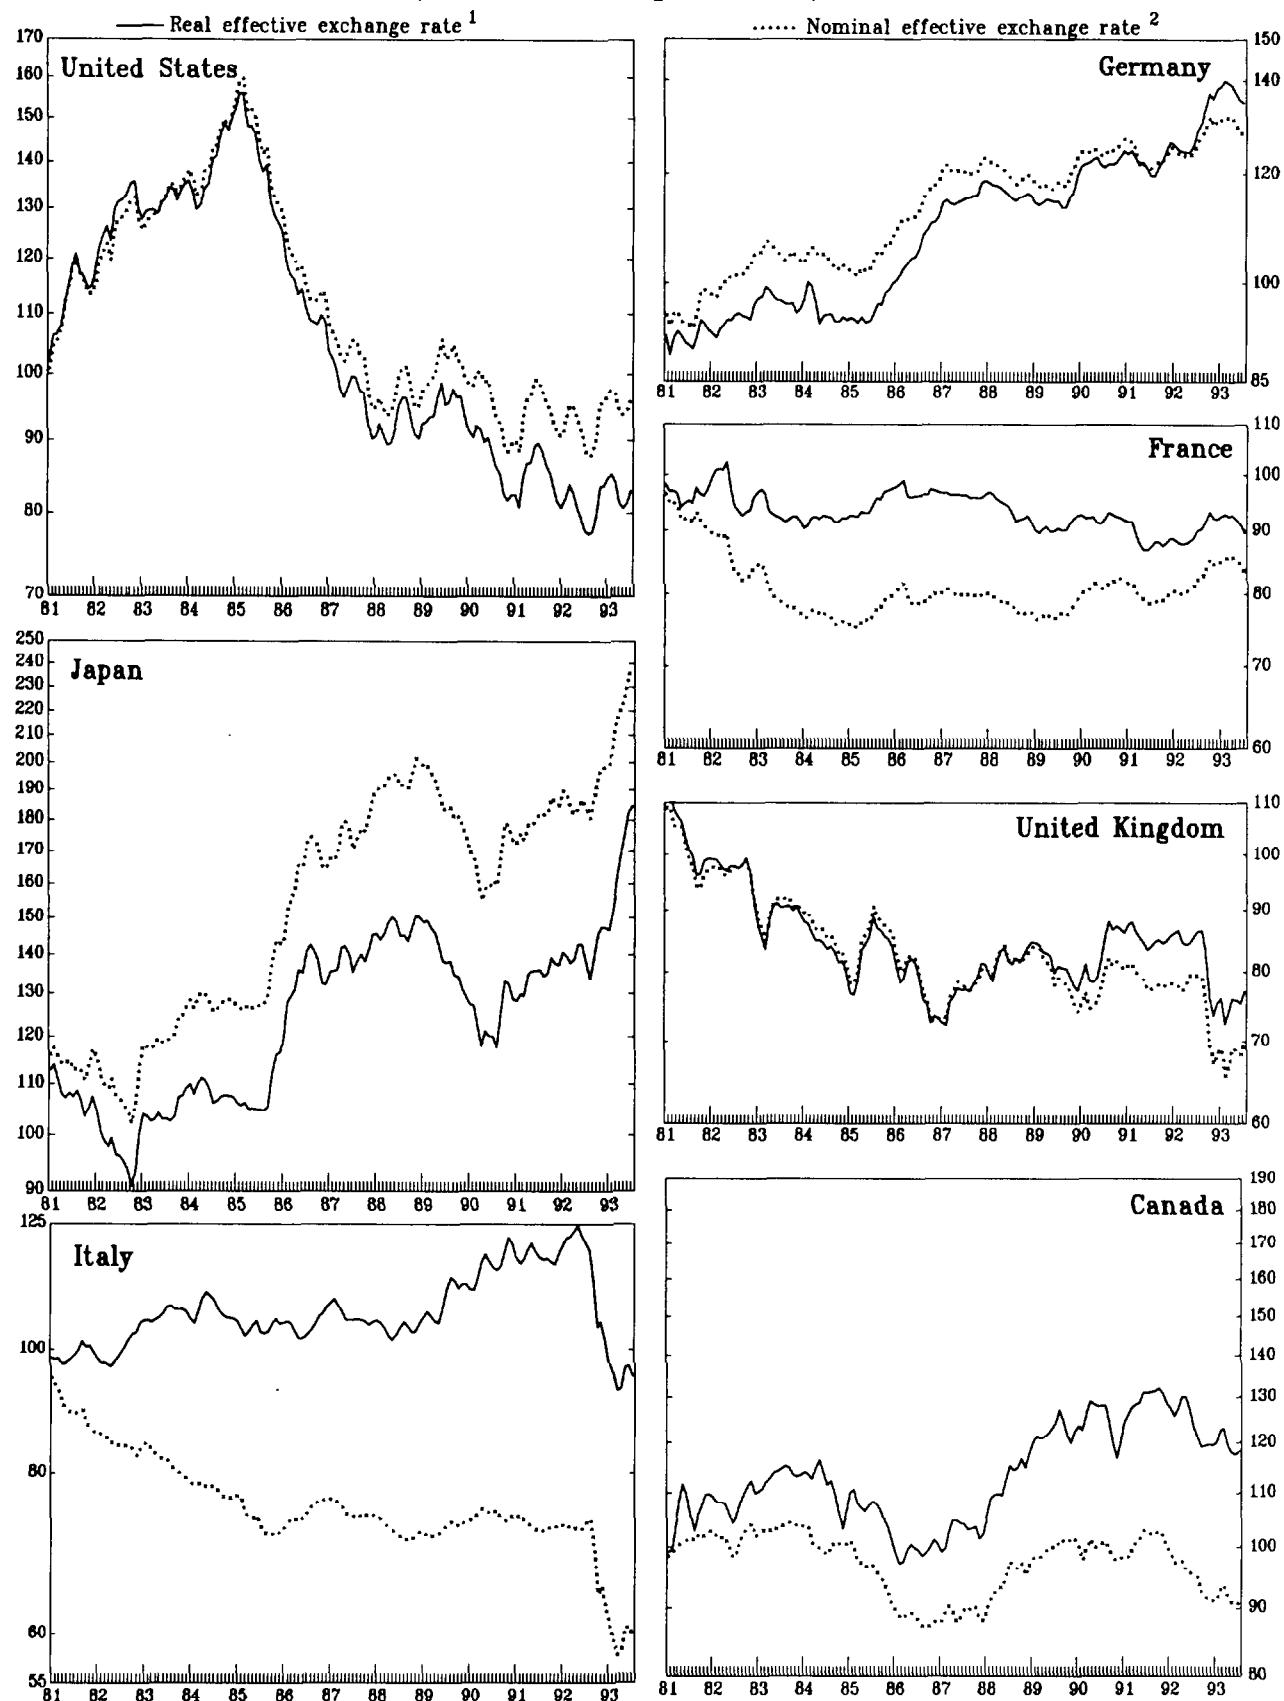

Supplementary Chart 11.  
ERM: Unemployment Rates

**Chart 1. Major Industrial Countries: Monthly Average Nominal and Real Effective Exchange Rates, January 1981 to July 1993**

(Indices, 1980 = 100; logarithmic scale)

1 Defined in terms of relative normalized unit labor costs in manufacturing and constructed using trade weights based on 1980 trade data. Data for October 1991 through July 1993 are estimated on the basis of preliminary information on normalized unit labor costs.

2 Constructed using same weights as real effective exchange rate indices

**Chart 2. Major Industrial Countries: Nominal Effective Exchange Rates<sup>1</sup>**  
**April 1989 to August 1993**

(Indices, 1980 = 100; Logarithmic scale)

<sup>1</sup> Constructed using weights based on the Fund's Multilateral Exchange Rate Model; weekly averages of daily data.

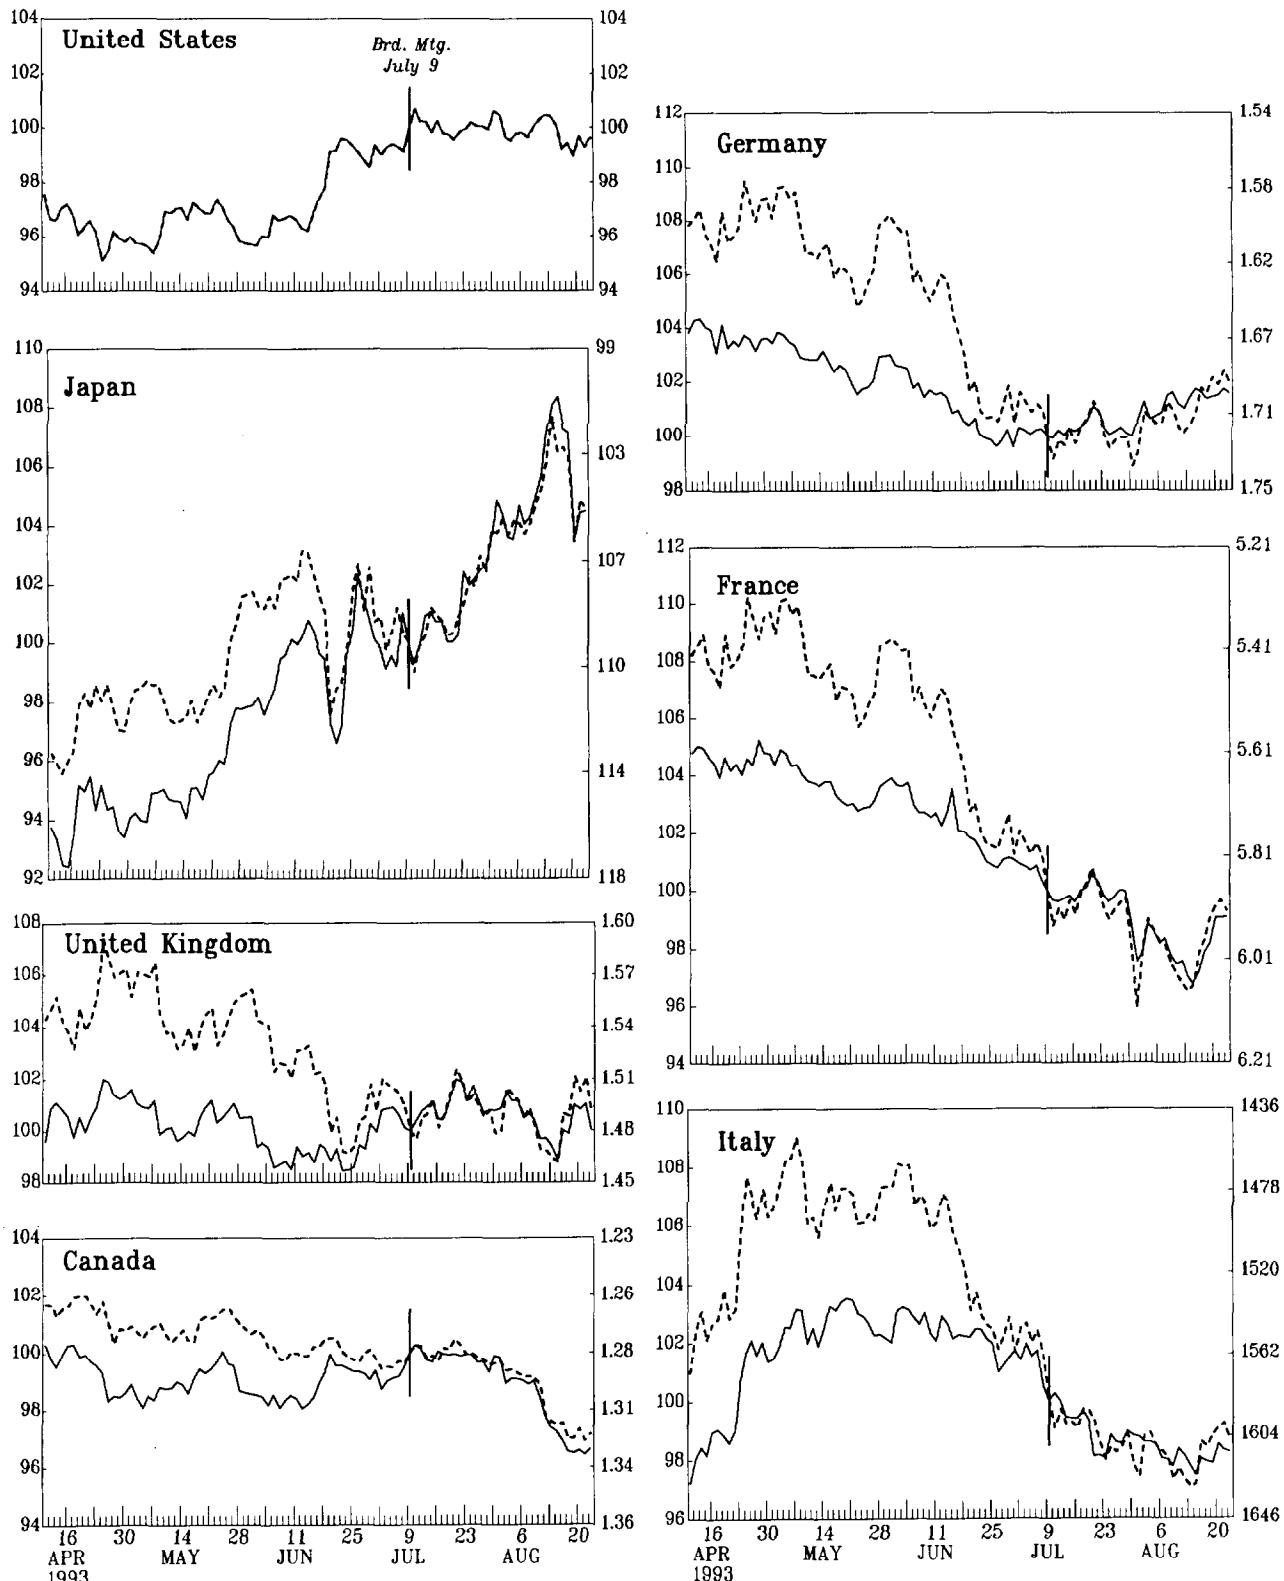

**Chart 3. Major Industrial Countries: Bilateral Exchange Rates Vis-à-vis  
U.S. Dollar and Nominal Effective Exchange Rate Indices<sup>1/</sup>**

**April 12, 1993 – August 24, 1993**  
(Scaling Depicts Comparable Percentage Changes)

----- U.S. Dollar Exchange Rate  
(left and right scales)<sup>2/</sup>

——— Nominal Effective Exchange Rate  
(left scale)<sup>2/</sup>

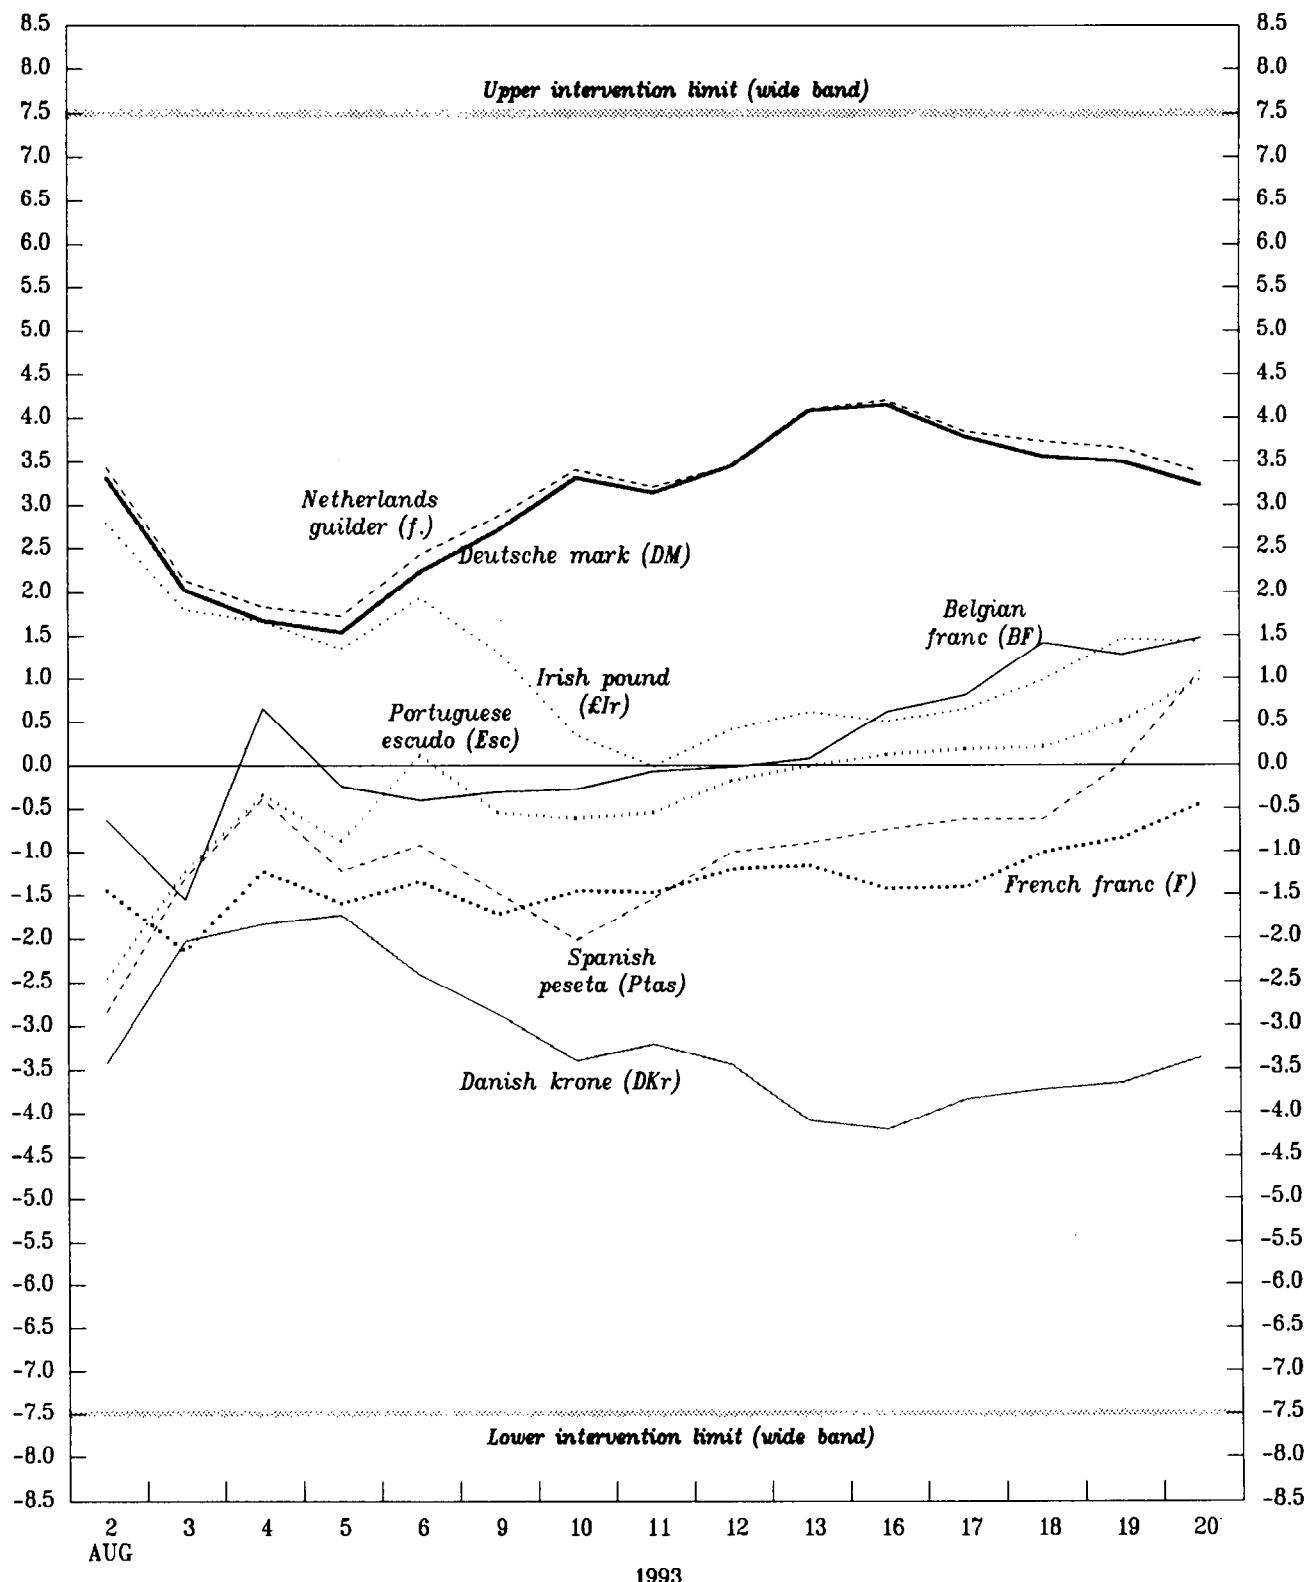

<sup>1/</sup> Daily, based on noon quotations in London.

<sup>2/</sup> The left scale is an index with the observation on July 9, 1993=100 (July 9 is the date of last Board Meeting on Exchange Rate Developments). The right scale measures the bilateral rate, in units of local currency per U.S. dollar, except that for the United Kingdom the rate is expressed as U.S. dollars per pound sterling.

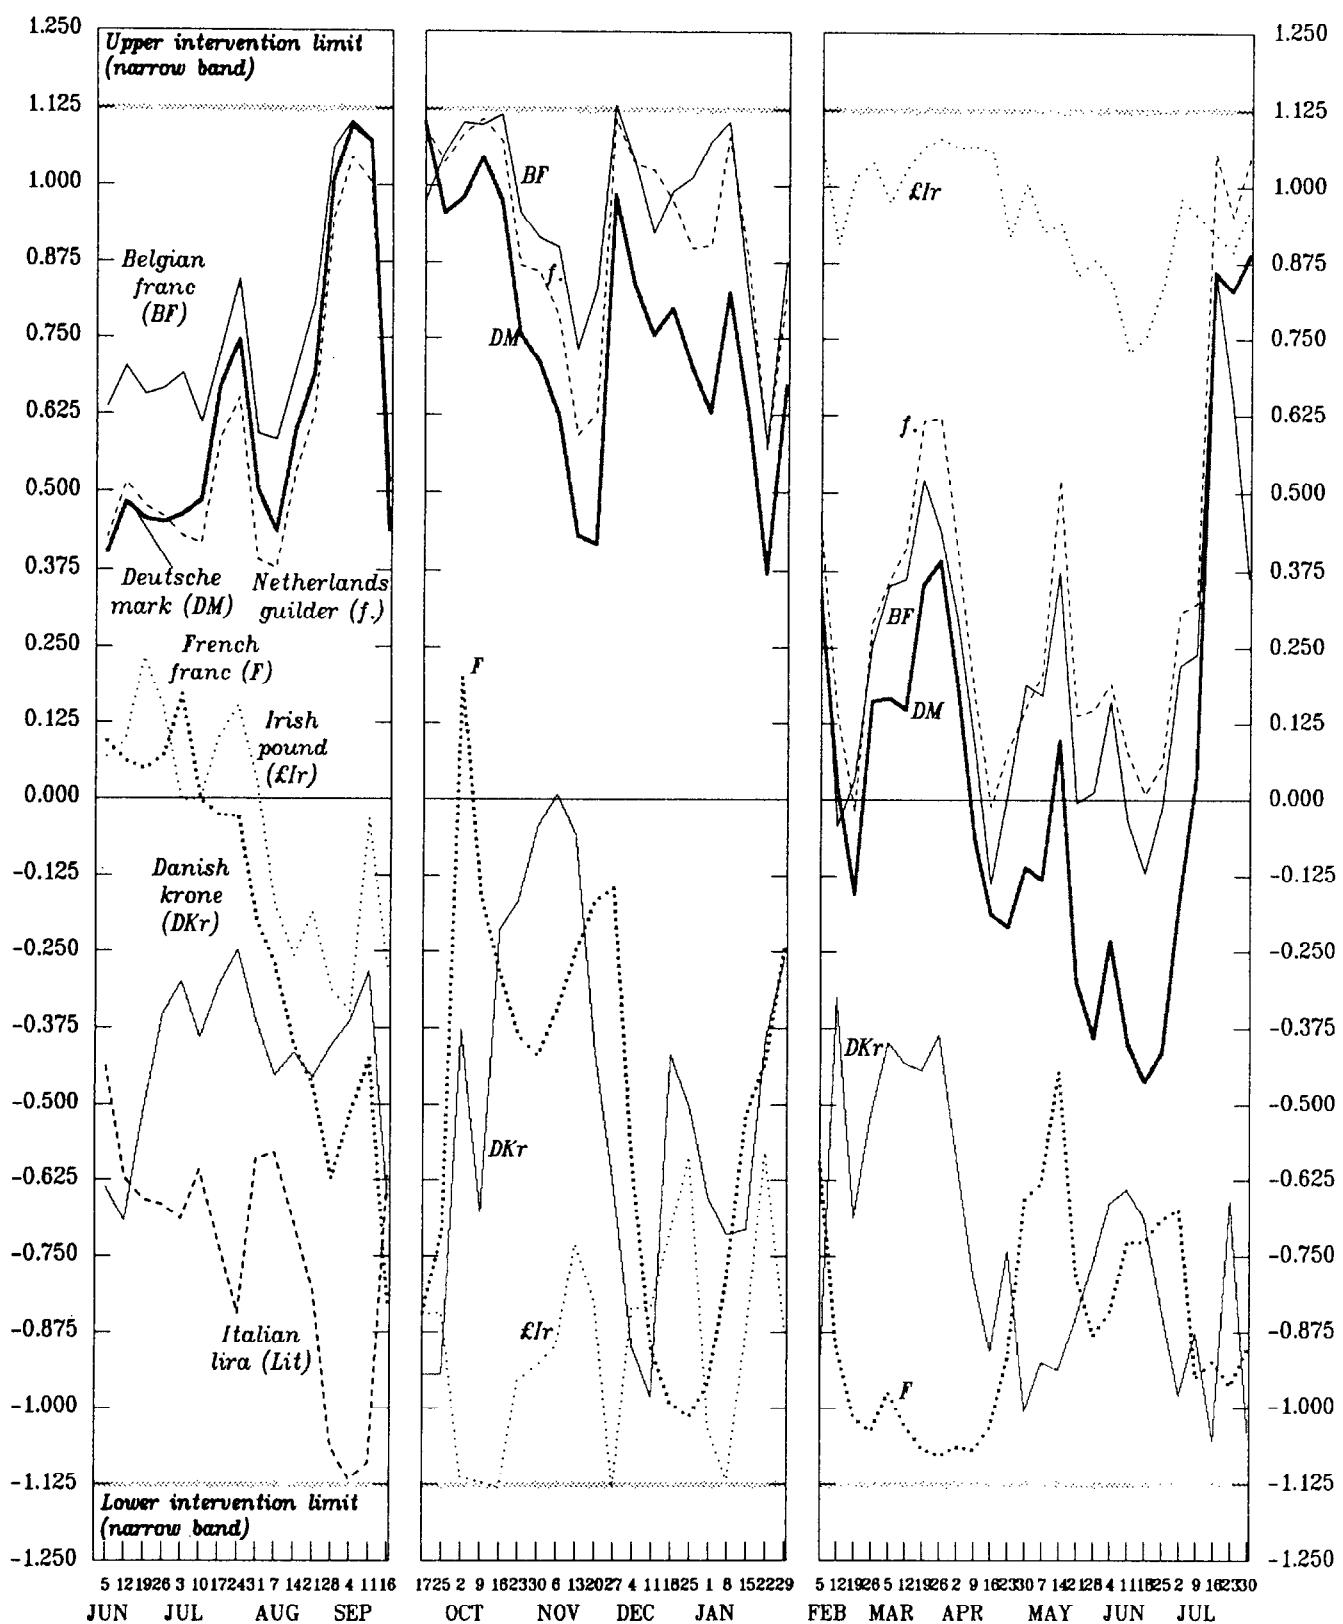

Chart 4. European Monetary System: Positions in the Wide ERM Band <sup>1</sup>  
 August 1993

<sup>1</sup> ERM is the exchange rate mechanism of the European Monetary System. Weekly averages of daily data. For any pair of currencies shown in chart, the vertical distance between them measures the percentage deviation of their bilateral exchange rate from their bilateral central rate.

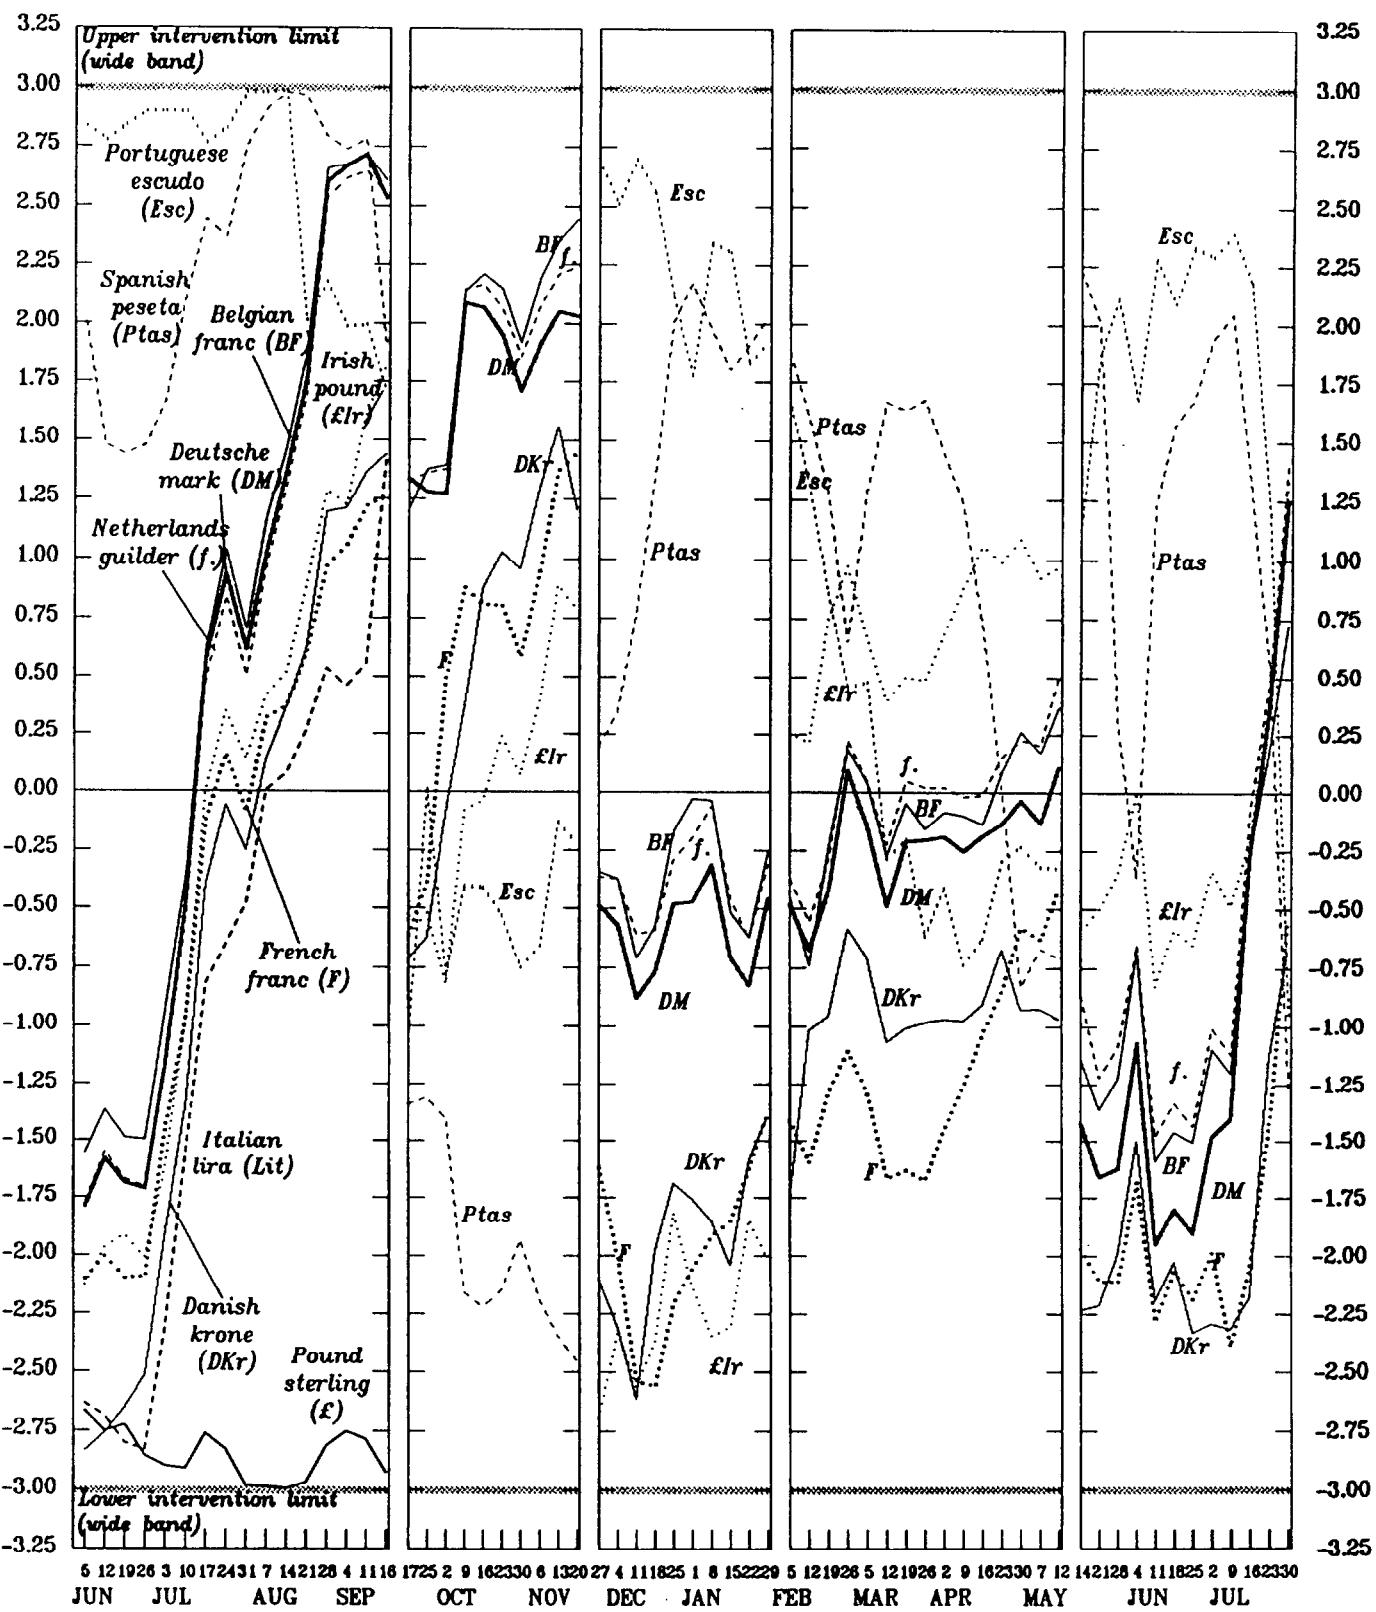

Chart 5. European Monetary System: Positions in the Narrow ERM Band <sup>1</sup>  
 June 1992 to July 1993

1 ERM is the exchange rate mechanism of the European Monetary System. Weekly averages of daily data. For any pair of currencies shown in the chart, the vertical distance between them measures the percentage deviation of their bilateral exchange rate from their bilateral central rate. The pound sterling and Italian lira left the ERM on September 16-17. The Irish pound was devalued on February 1.

Chart 6. European Monetary System: Positions in the Wide ERM Band<sup>1</sup>  
June 1992 to July 1993

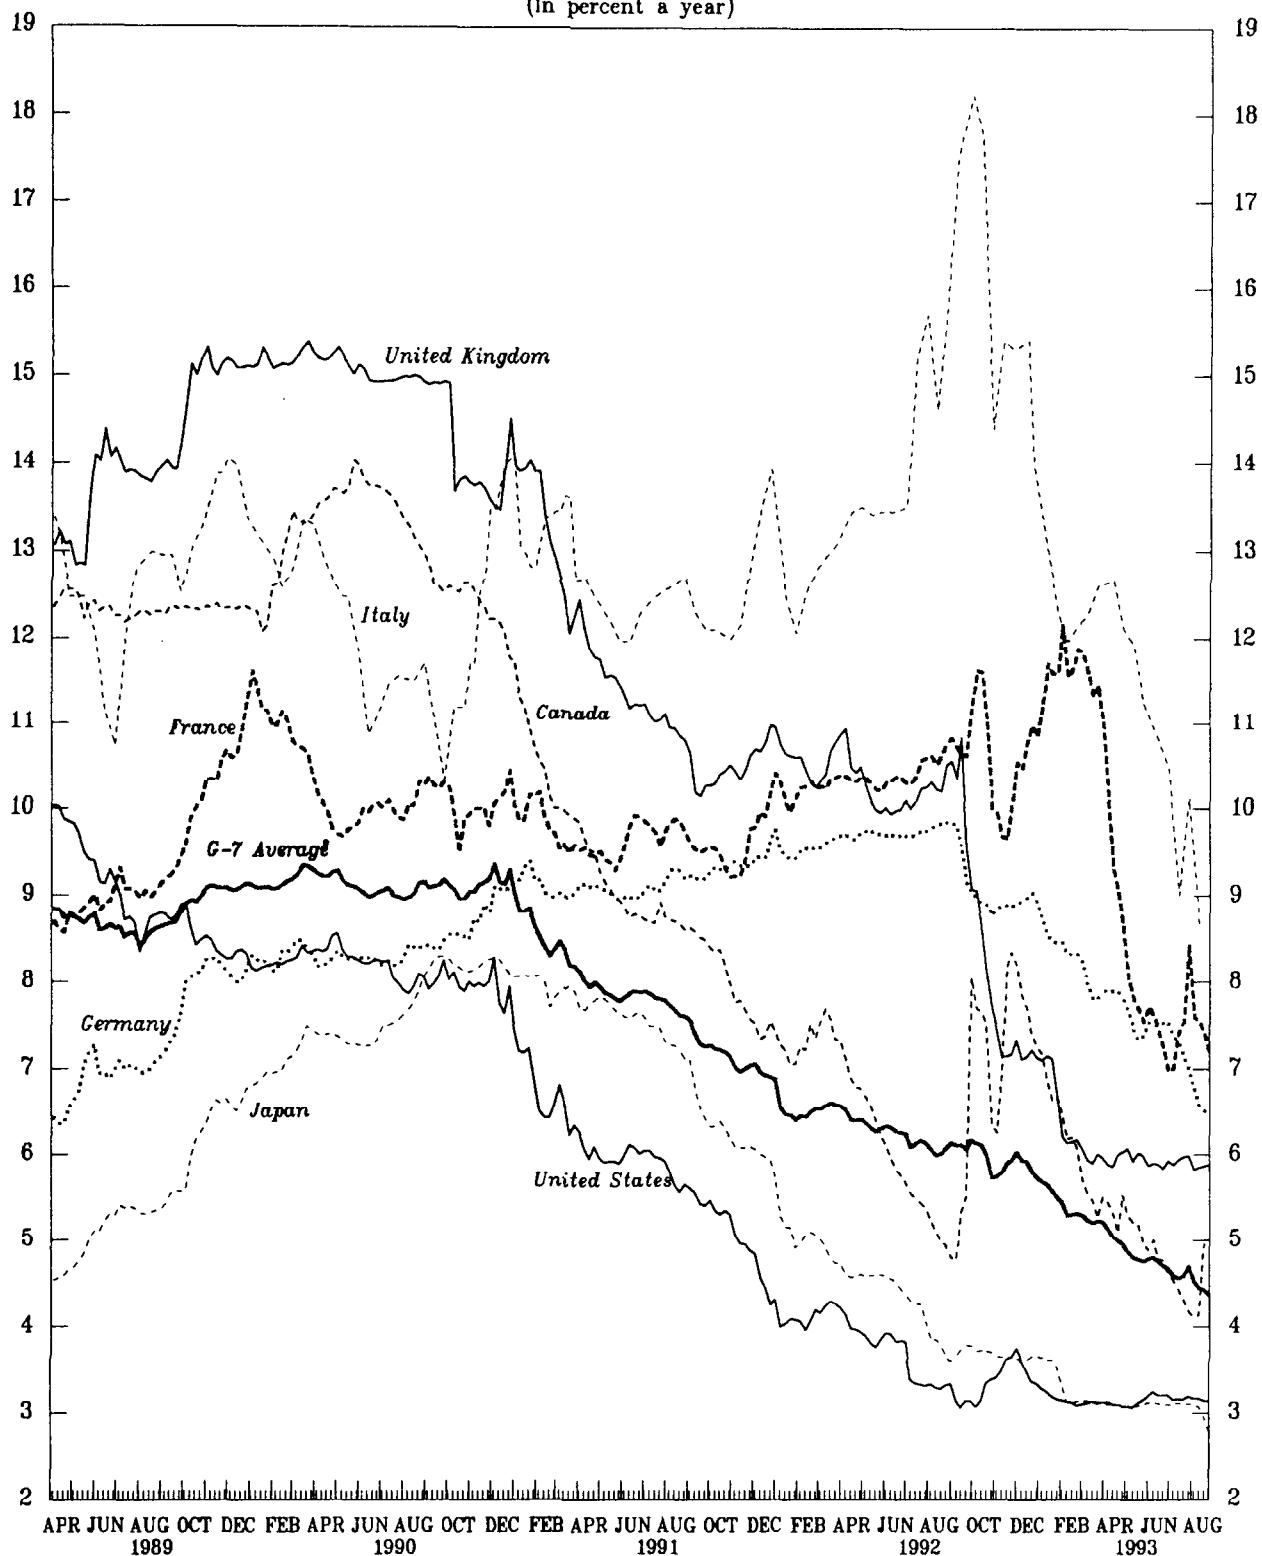

1. ERM is the exchange rate mechanism of the European Monetary System. Weekly averages of daily data. For any pair of currencies shown in chart, the vertical distance between them measures the percentage deviation of their bilateral exchange rate from their bilateral central rate. The pound sterling and Italian lira left the ERM on September 16-17; the Spanish peseta was devalued by 5 percent within the ERM on the later date. The Portuguese escudo and Spanish peseta were devalued within that mechanism on November 23. The Irish pound was devalued on February 1. The Portuguese escudo and Spanish peseta were devalued on May 13.

Chart 7. Major Industrial Countries: Short-Term Interest Rates<sup>1</sup>

April 1989 to August 1993

(In percent a year)

<sup>1</sup> Three-month certificate of deposit rates for the United States and Japan; three-month treasury bill rate for Italy; rate on three-month prime corporate paper for Canada; and three-month interbank deposit rates for other countries. Weekly averages of daily observations are plotted for all countries other than Italy and Canada. For Italy, results of fortnightly treasury bill auctions are shown. For Canada, weekly observations are plotted.

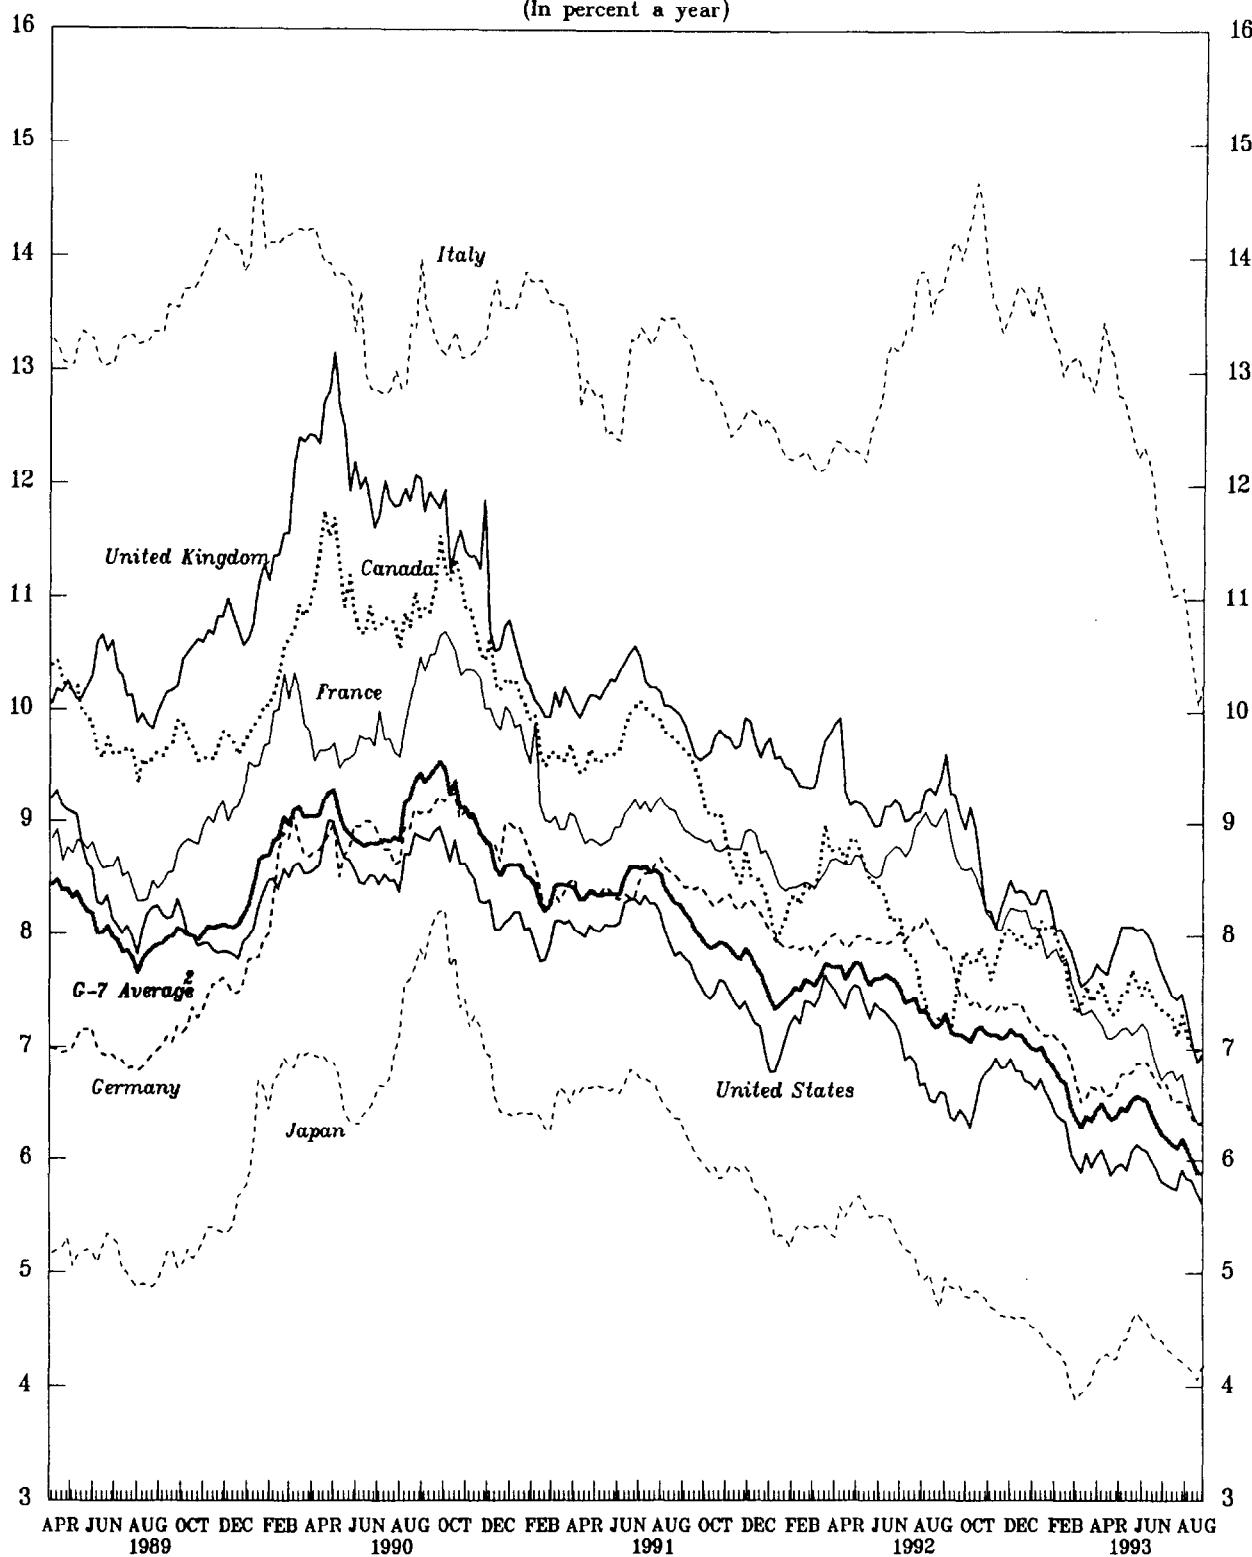

2 1987 GDP weights.

Chart 8. Major Industrial Countries: Long-Term Interest Rates<sup>1</sup>

April 1989 to August 1993

(In percent a year)

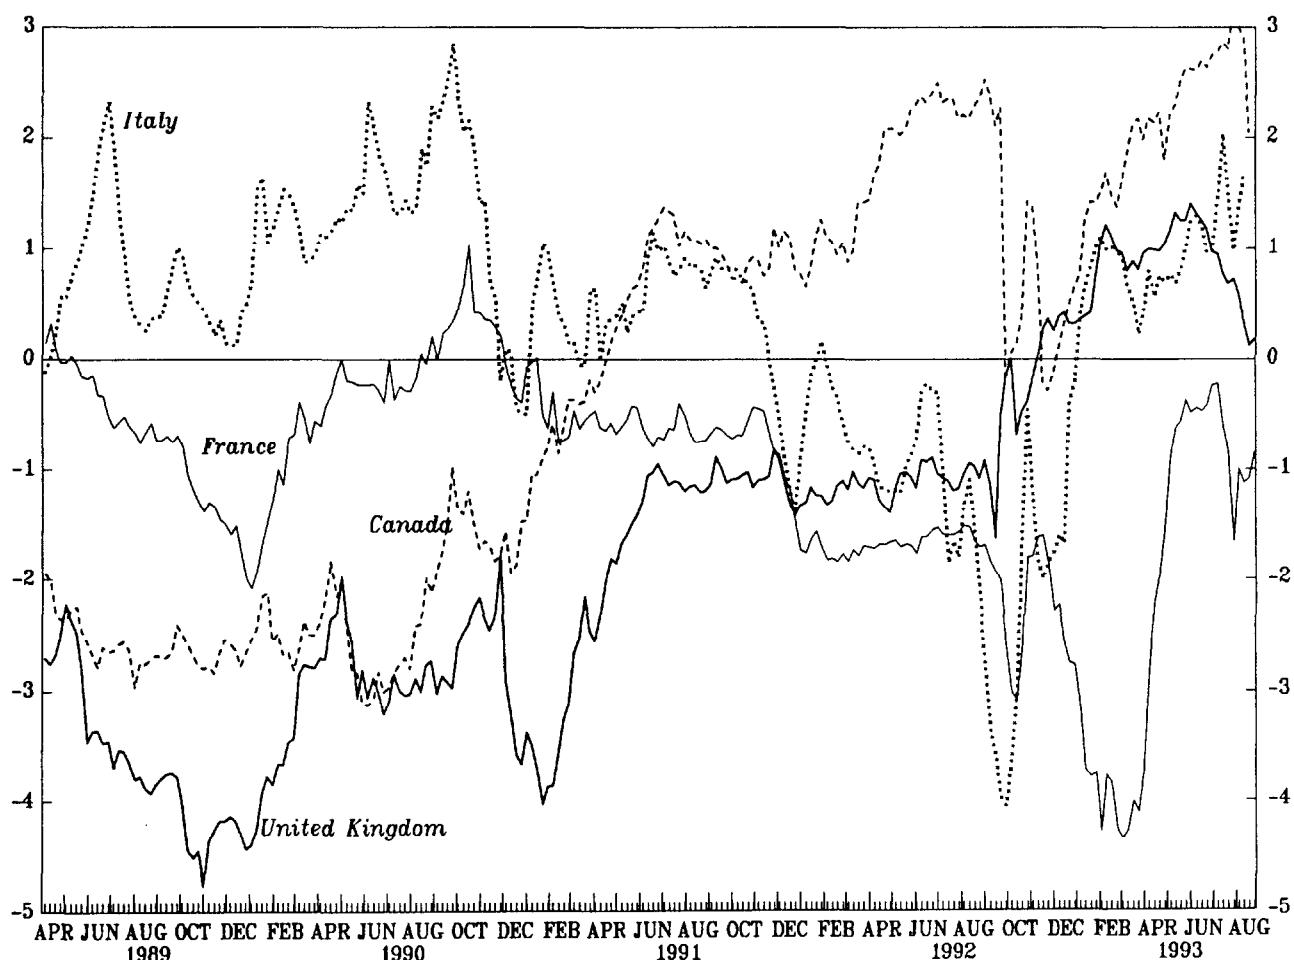

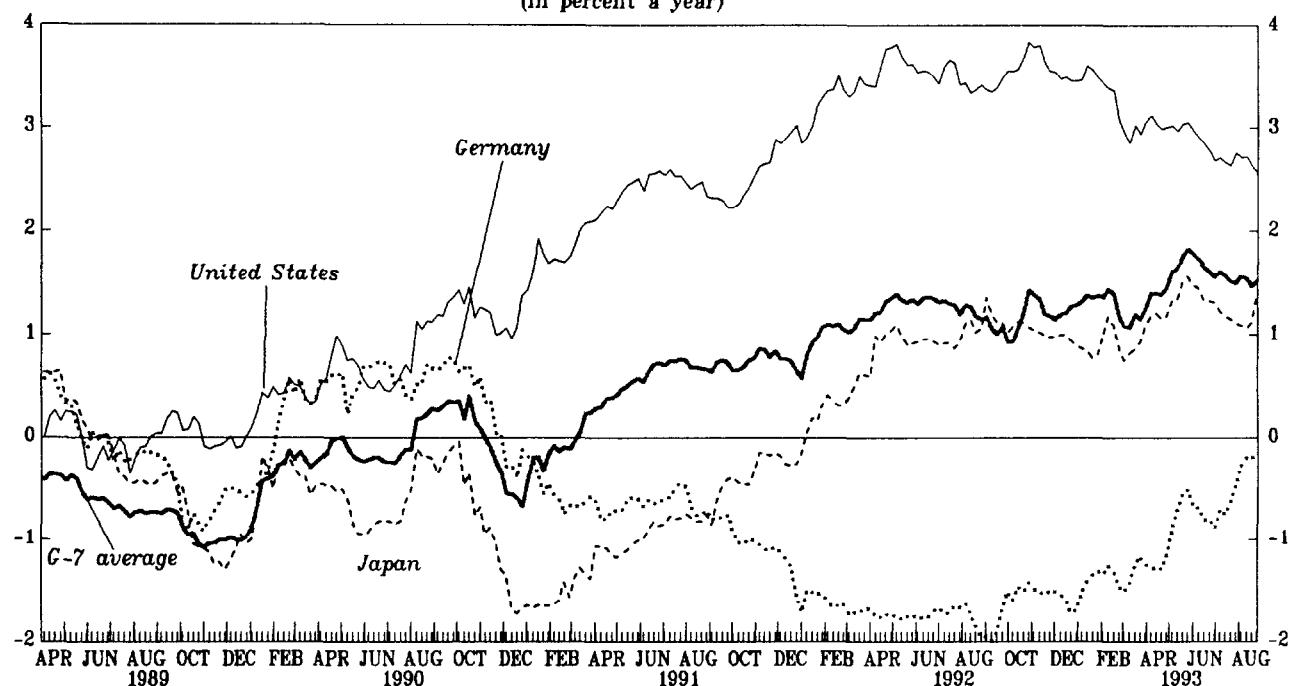

<sup>1</sup> Yields on government bonds with residual maturities of 10 years or nearest. Weekly averages of daily observations.

<sup>2</sup> 1987 GDP weights.

Chart 9. Major Industrial Countries: Differentials between  
Long and Short-Term Interest Rates<sup>1</sup>  
April 1989 to August 1993

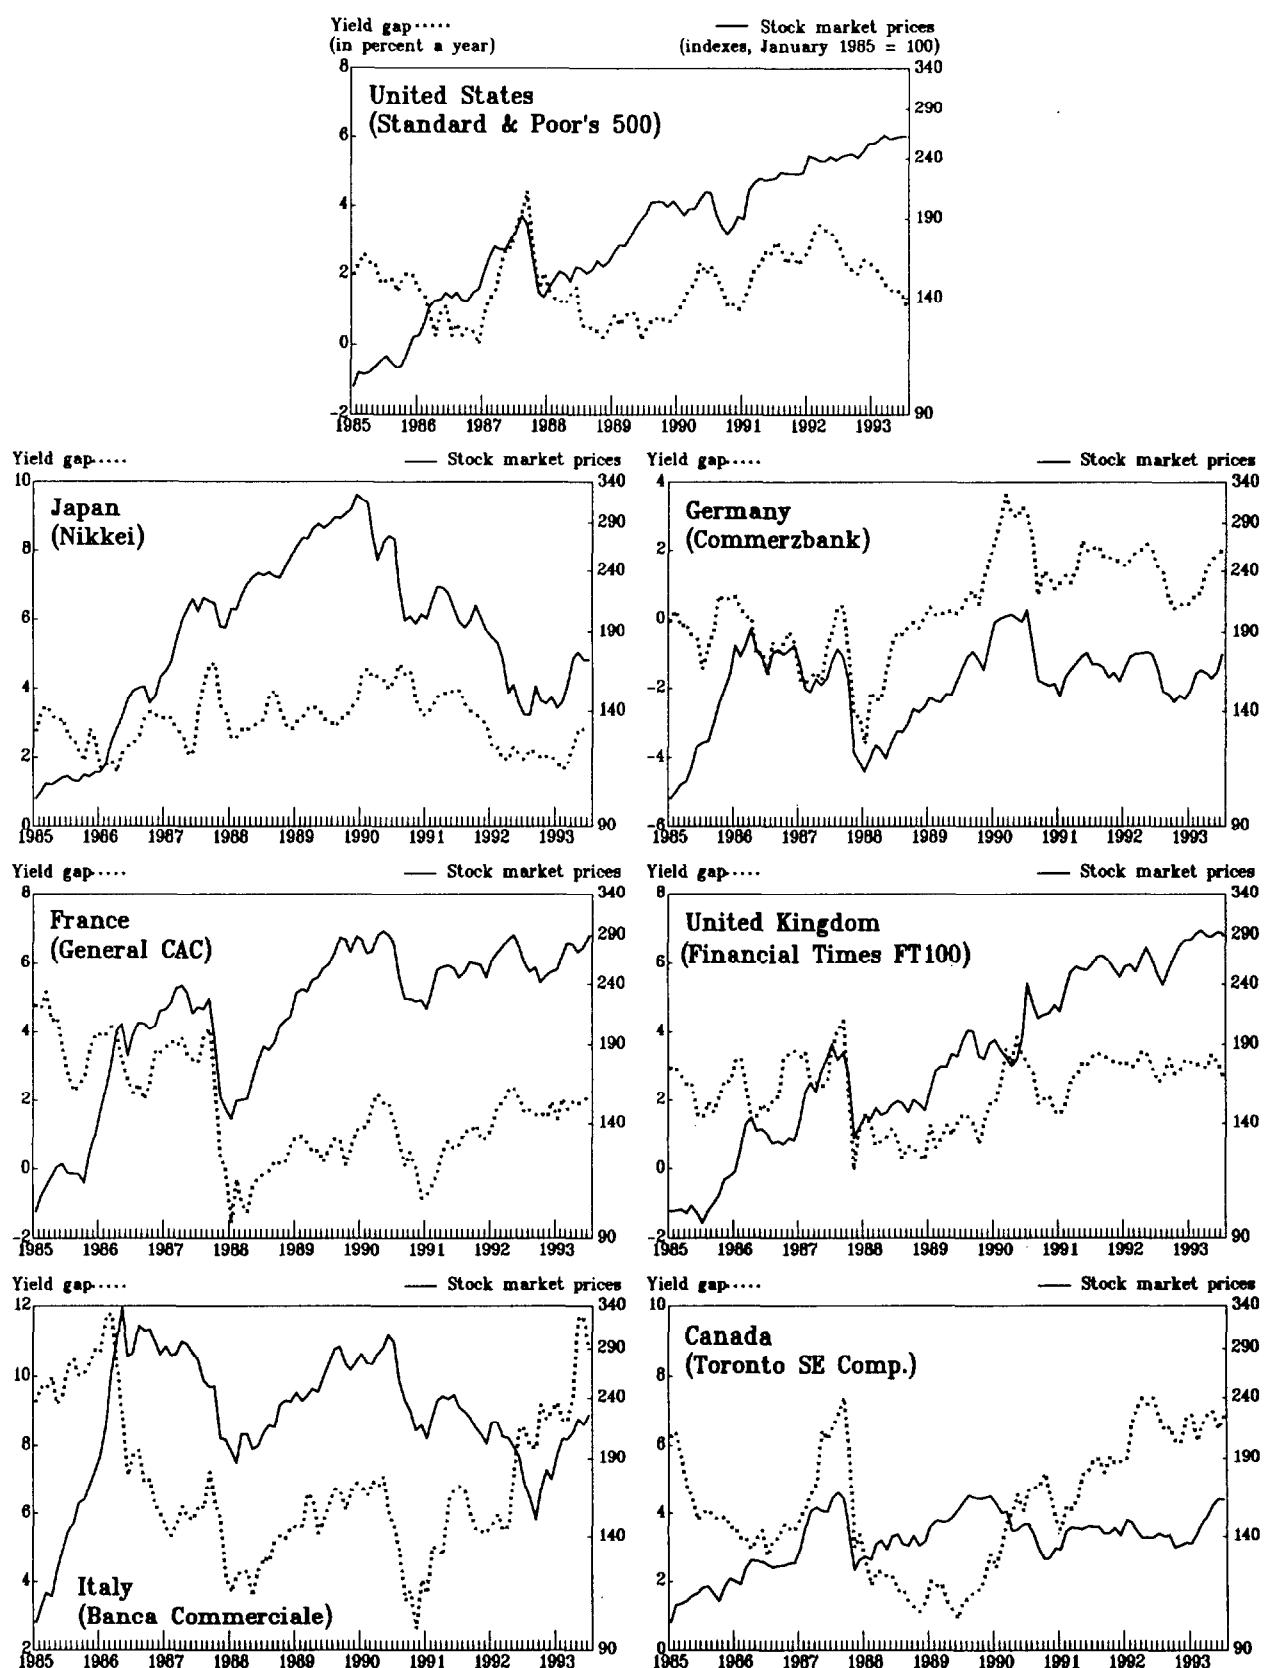

(In percent a year)

<sup>1</sup> The chart shows, for each country, the difference between the long rate shown in Chart 7 and the short rate shown in Chart 6, except that for the U.S. and U.K., 3-month treasury bill rates are used as short rates.

**Chart 10. Major Industrial Countries: Equity Yield Gaps<sup>1</sup> and Stock Market Prices, January 1985 to July 1993**  
 (Left scale in percent a year; Right scale indices, Jan 1985 = 100)

Source: For stock market prices and equity yields, Data Resources, Inc.

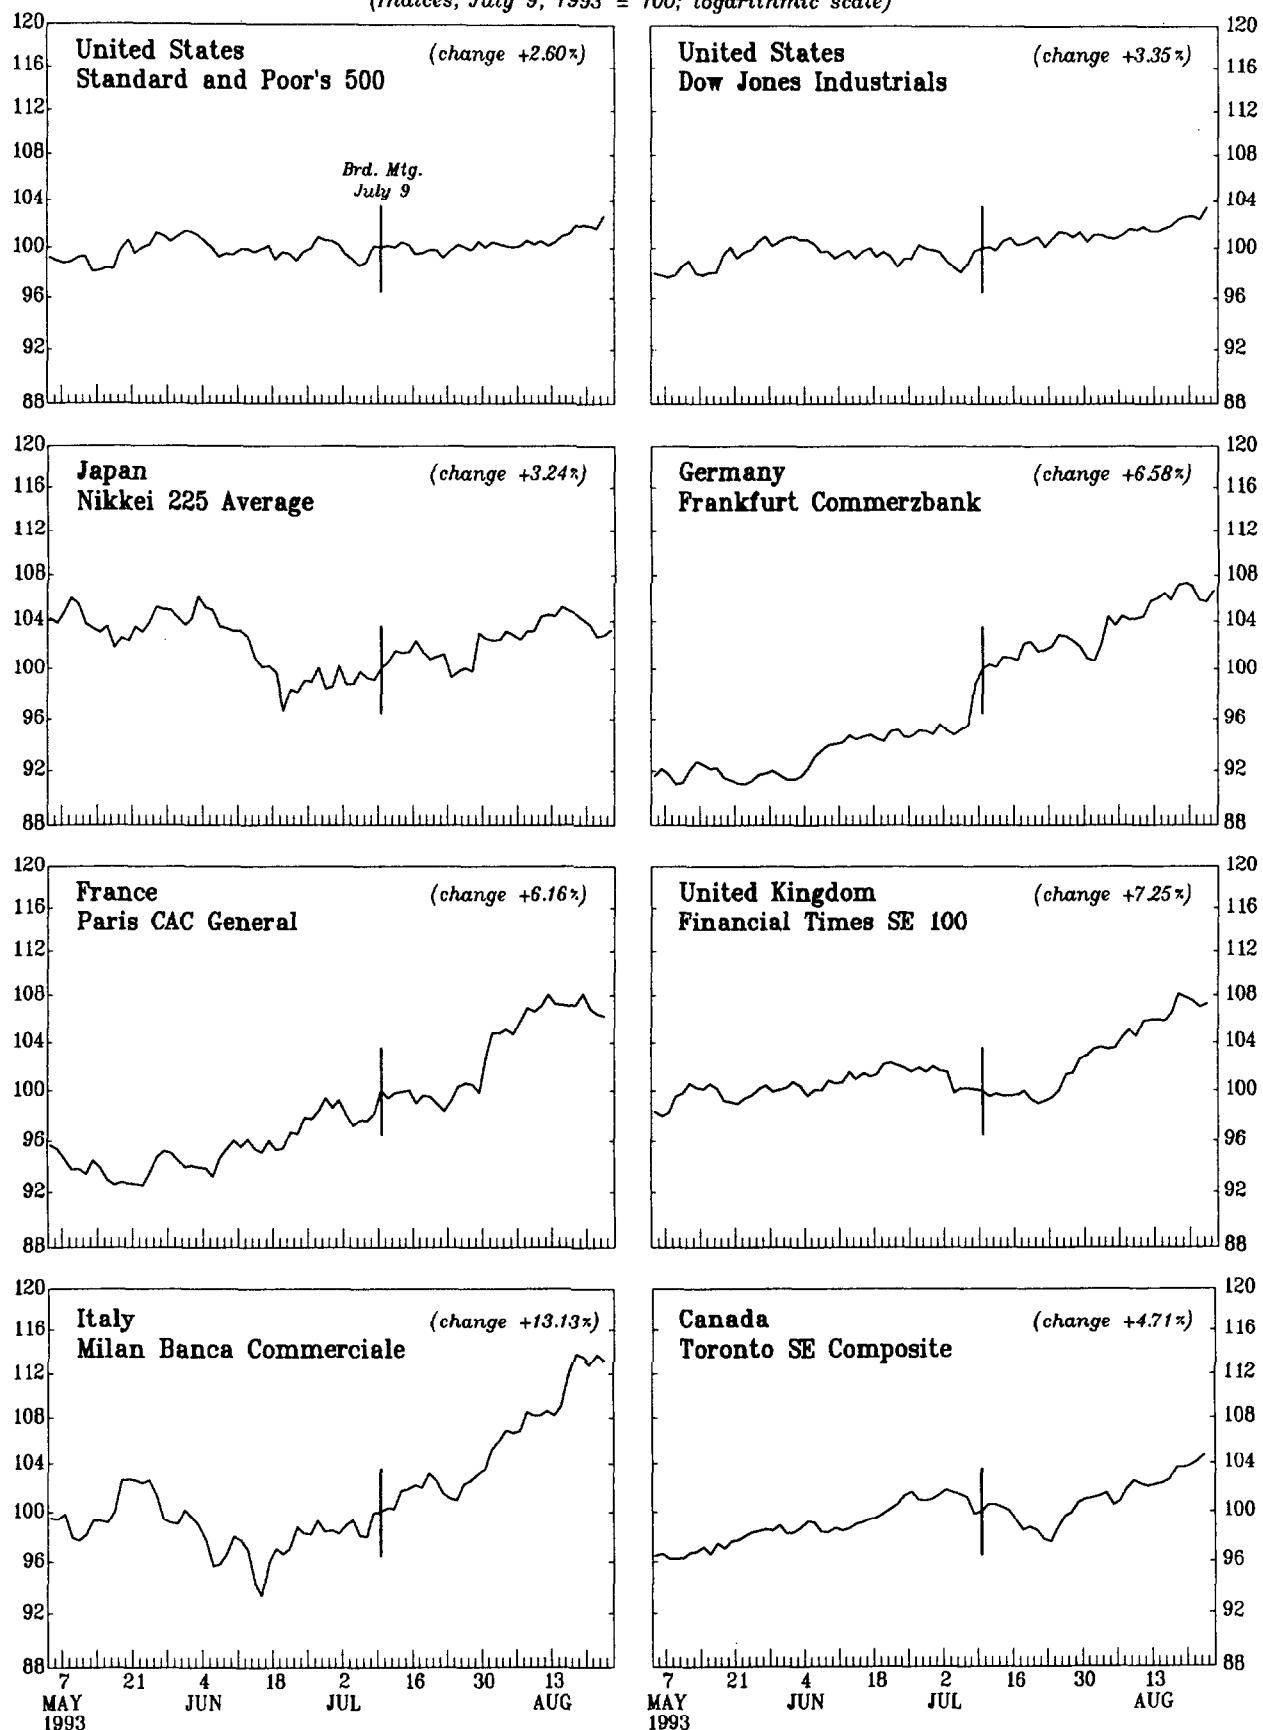

<sup>1</sup> The equity yield gap is defined as the difference between the yield on long-term government bonds and the inverse of the price-earnings ratio of stocks.

**Chart 11. Major Industrial Countries: Stock Market Indices<sup>1</sup>**

**May 5, 1993 – August 25, 1993**

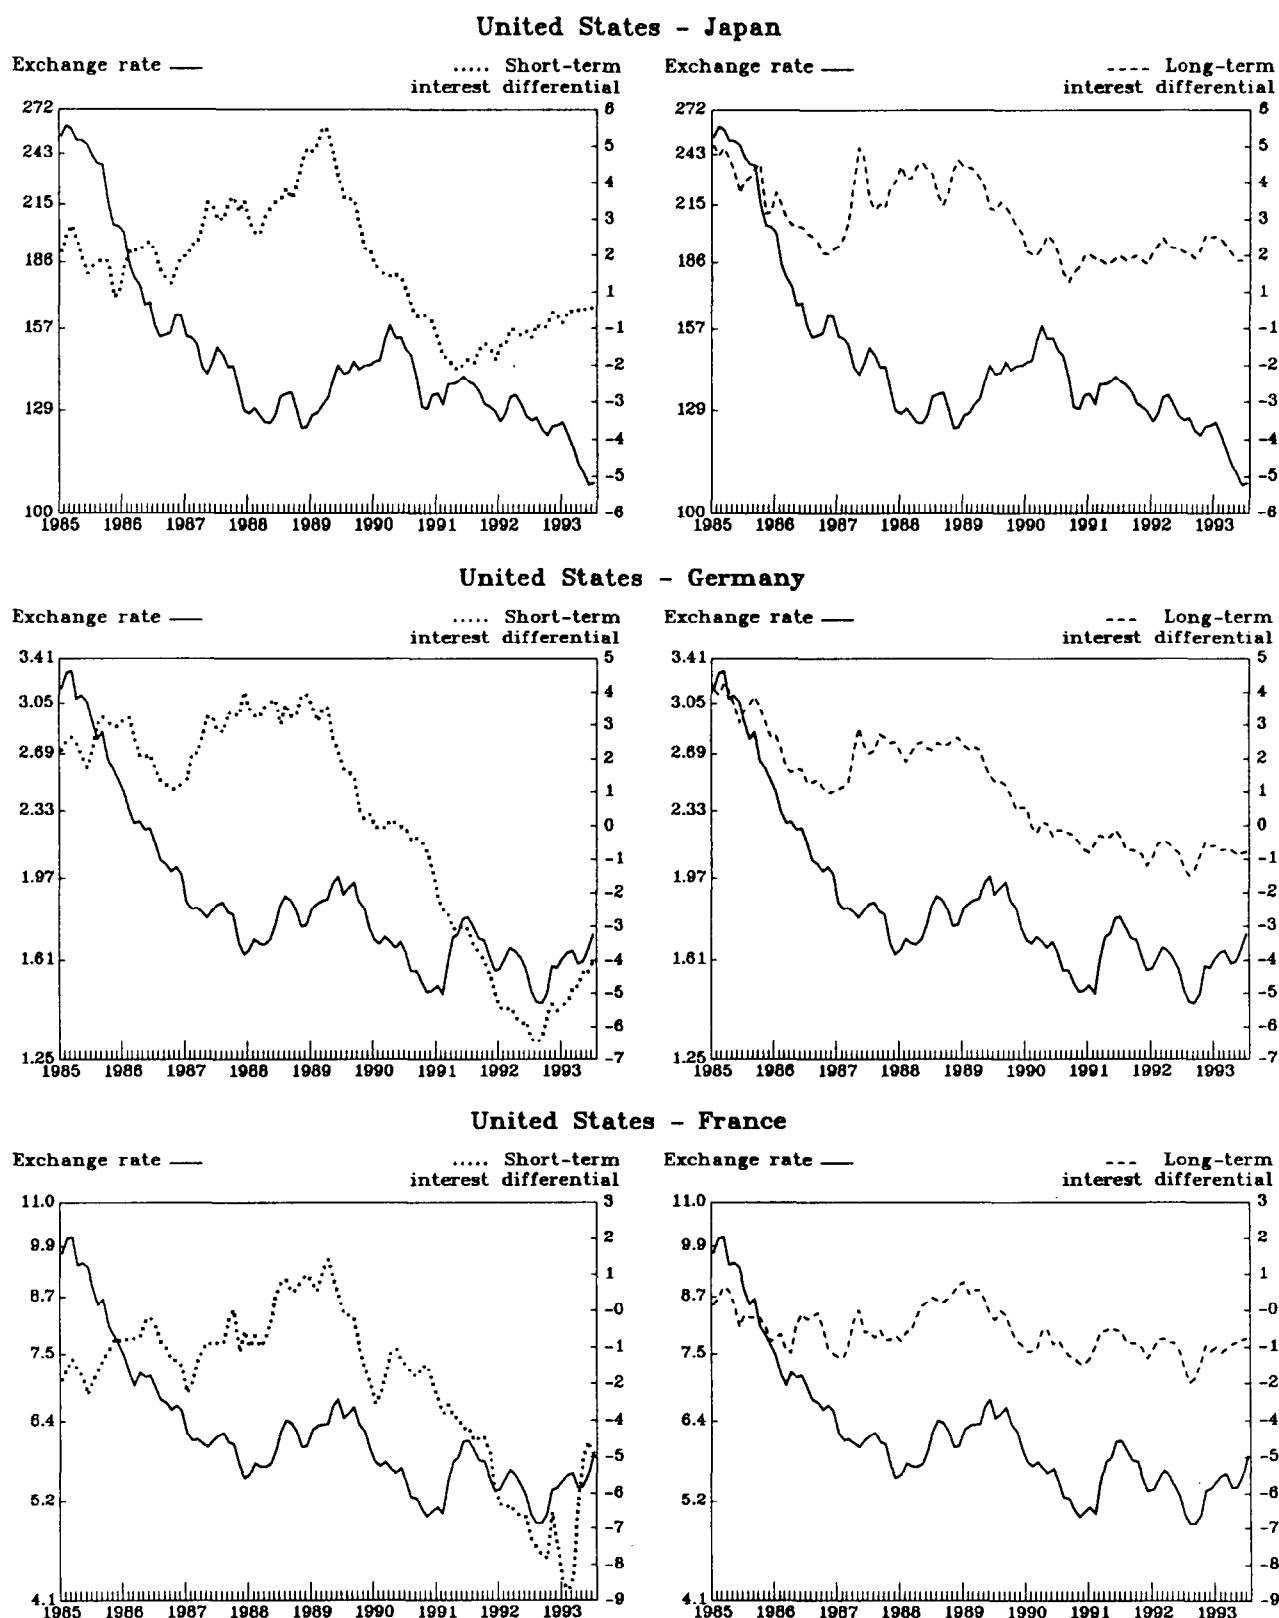

(Indices, July 9, 1993 = 100; logarithmic scale)

<sup>1</sup>Daily, with July 9, 1993=100. The percentage change is that from the last Board Meeting.

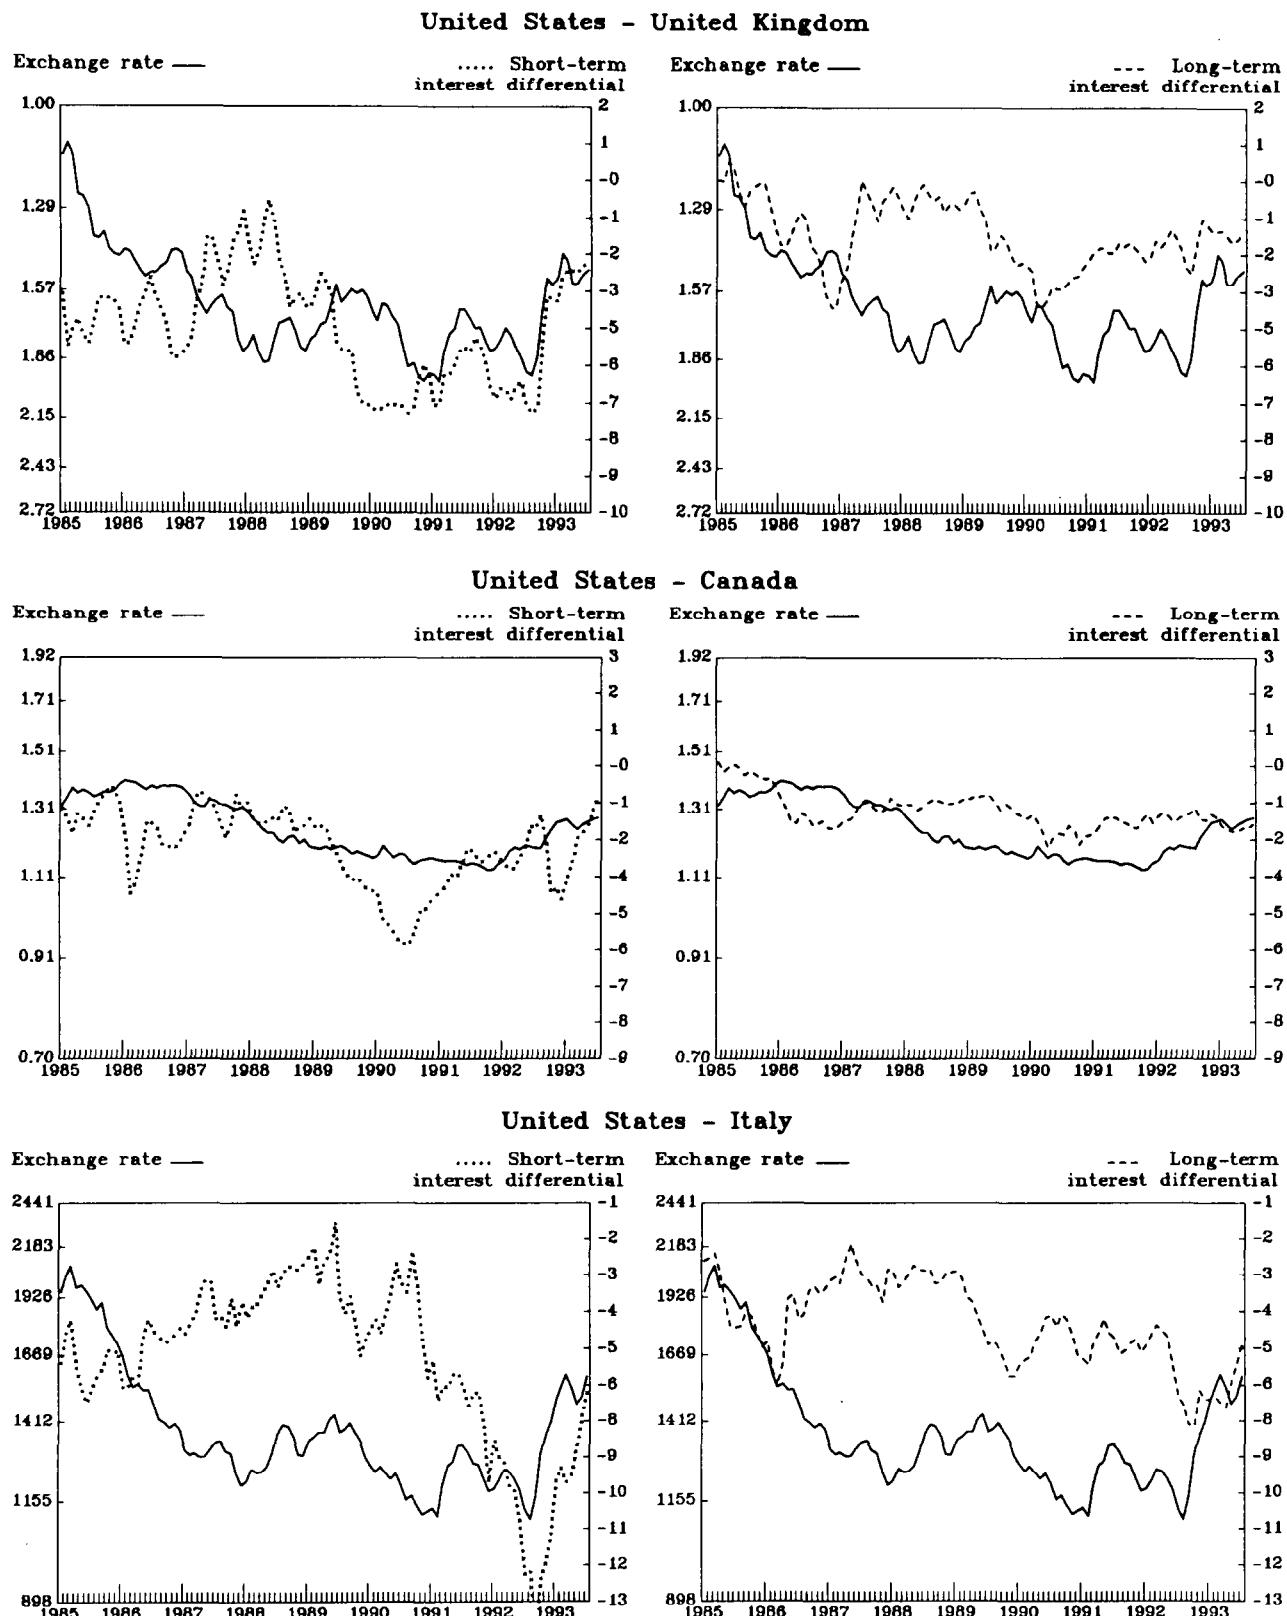

**Chart 12. Bilateral Exchange Rates and Interest Differentials  
vis-a-vis the U.S. Dollar<sup>1</sup>  
January 1985 to July 1993**

**Chart 12 (concluded). Bilateral Exchange Rates and Interest Differentials  
vis-a-vis the U.S. Dollar<sup>1</sup>  
January 1985 to July 1993**

<sup>1</sup> Interest differentials shown are U.S. interest rates minus domestic interest rates in percent a year. The interest rates are the same as those used in Charts 7 and 8. Exchange rates are drawn on logarithmic scales and are defined in terms of national currency units per U.S. dollar, except for the United Kingdom, where it is defined as U.S. dollars per pound sterling. The charts show monthly averages of daily data.

**Chart 13. Major Industrial Countries: Nominal and Real  
Short-Term Interest Rates, Q1 1961 to Q2 1993<sup>1</sup>**

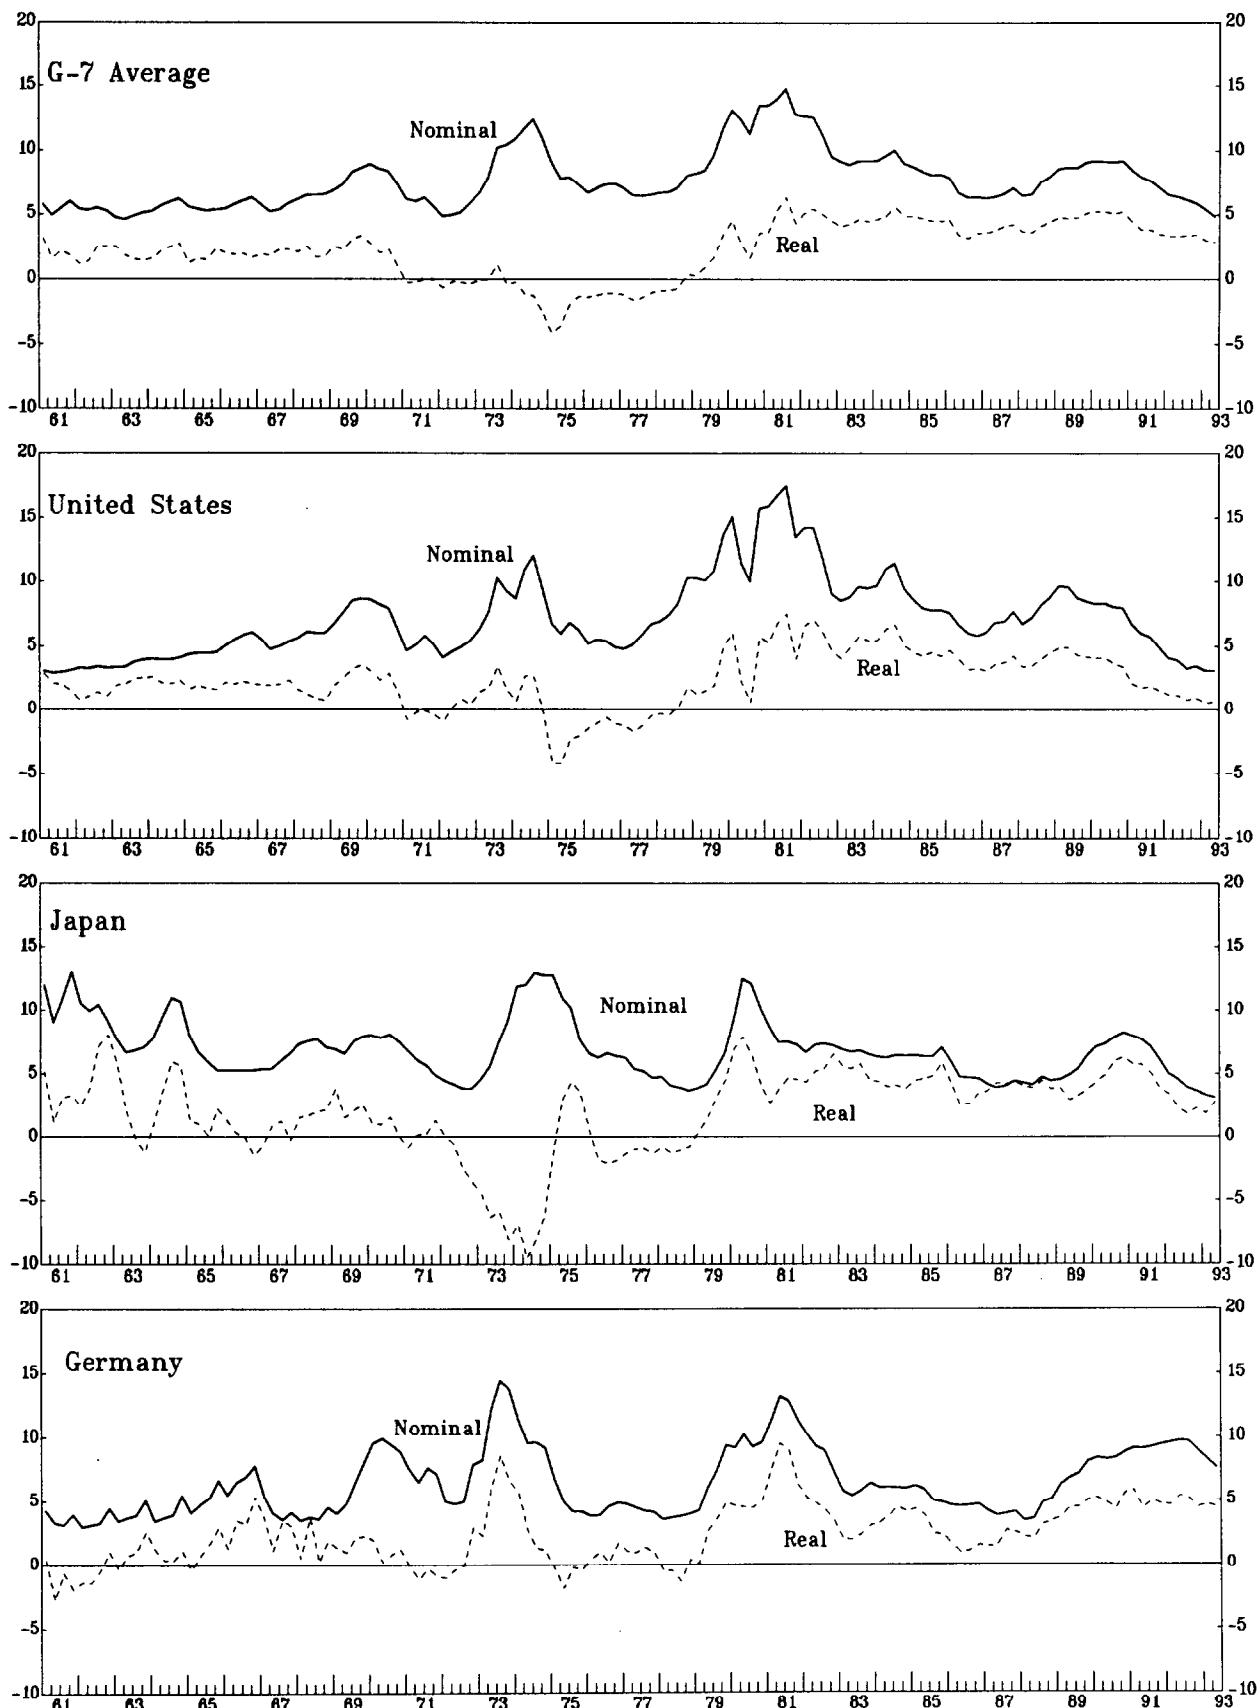

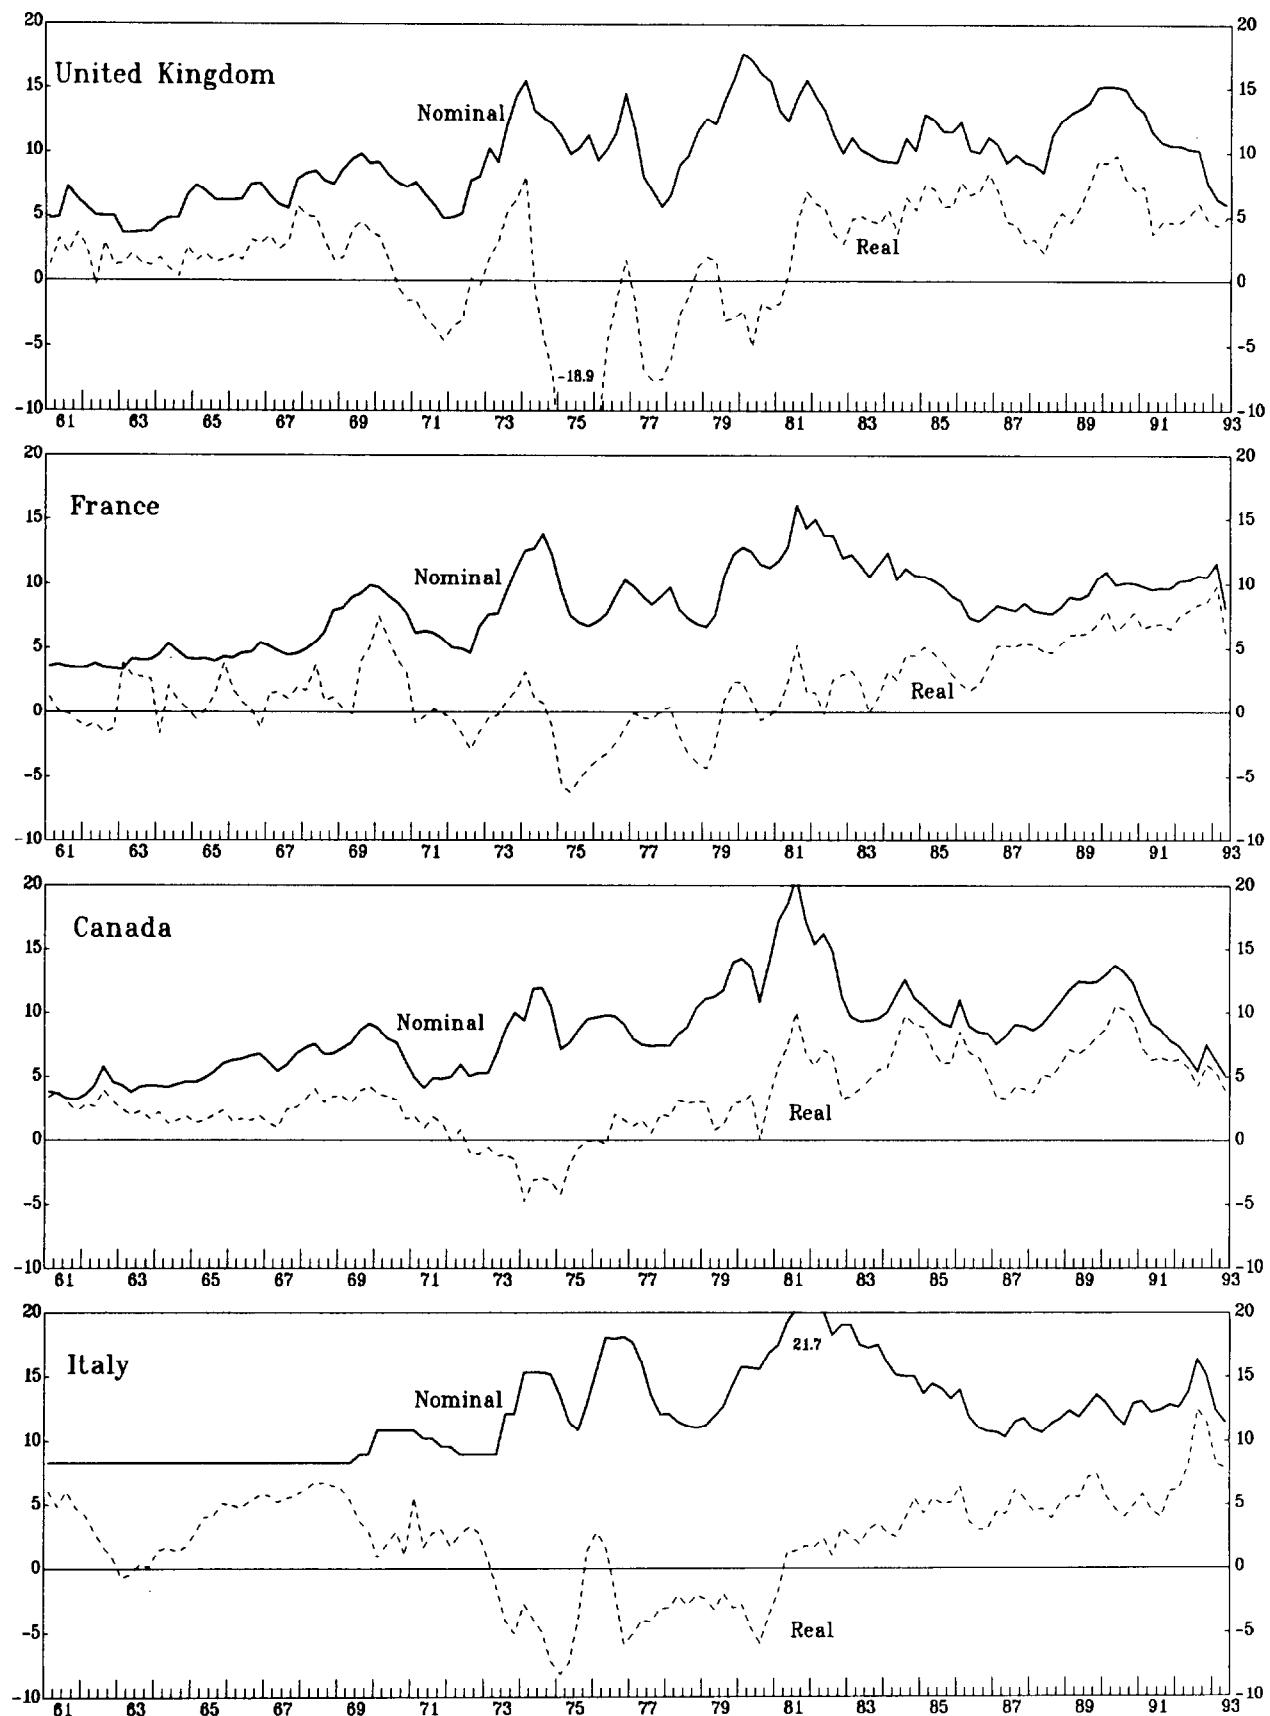

Chart 13 (concluded). Major Industrial Countries: Nominal and Real  
Short-Term Interest Rates, Q1 1961 to Q2 1993<sup>1</sup>

<sup>1</sup> 3-month rates. Definitions are as in Chart 6, with the following exceptions: United States, before 1976, euro-dollar deposit rate; Japan, before July 1984, Gensaki rate; United Kingdom, before 1983, treasury bill rate; France, before 1970, money market rate; Italy, before 1978, discount rate. Real rates are nominal rates minus the 4-quarter percentage change in the GDP(GNP) deflator.

**Chart 14. Major Industrial Countries: Nominal and Real  
Long-Term Interest Rates, Q1 1961 to Q2 1993<sup>1</sup>**

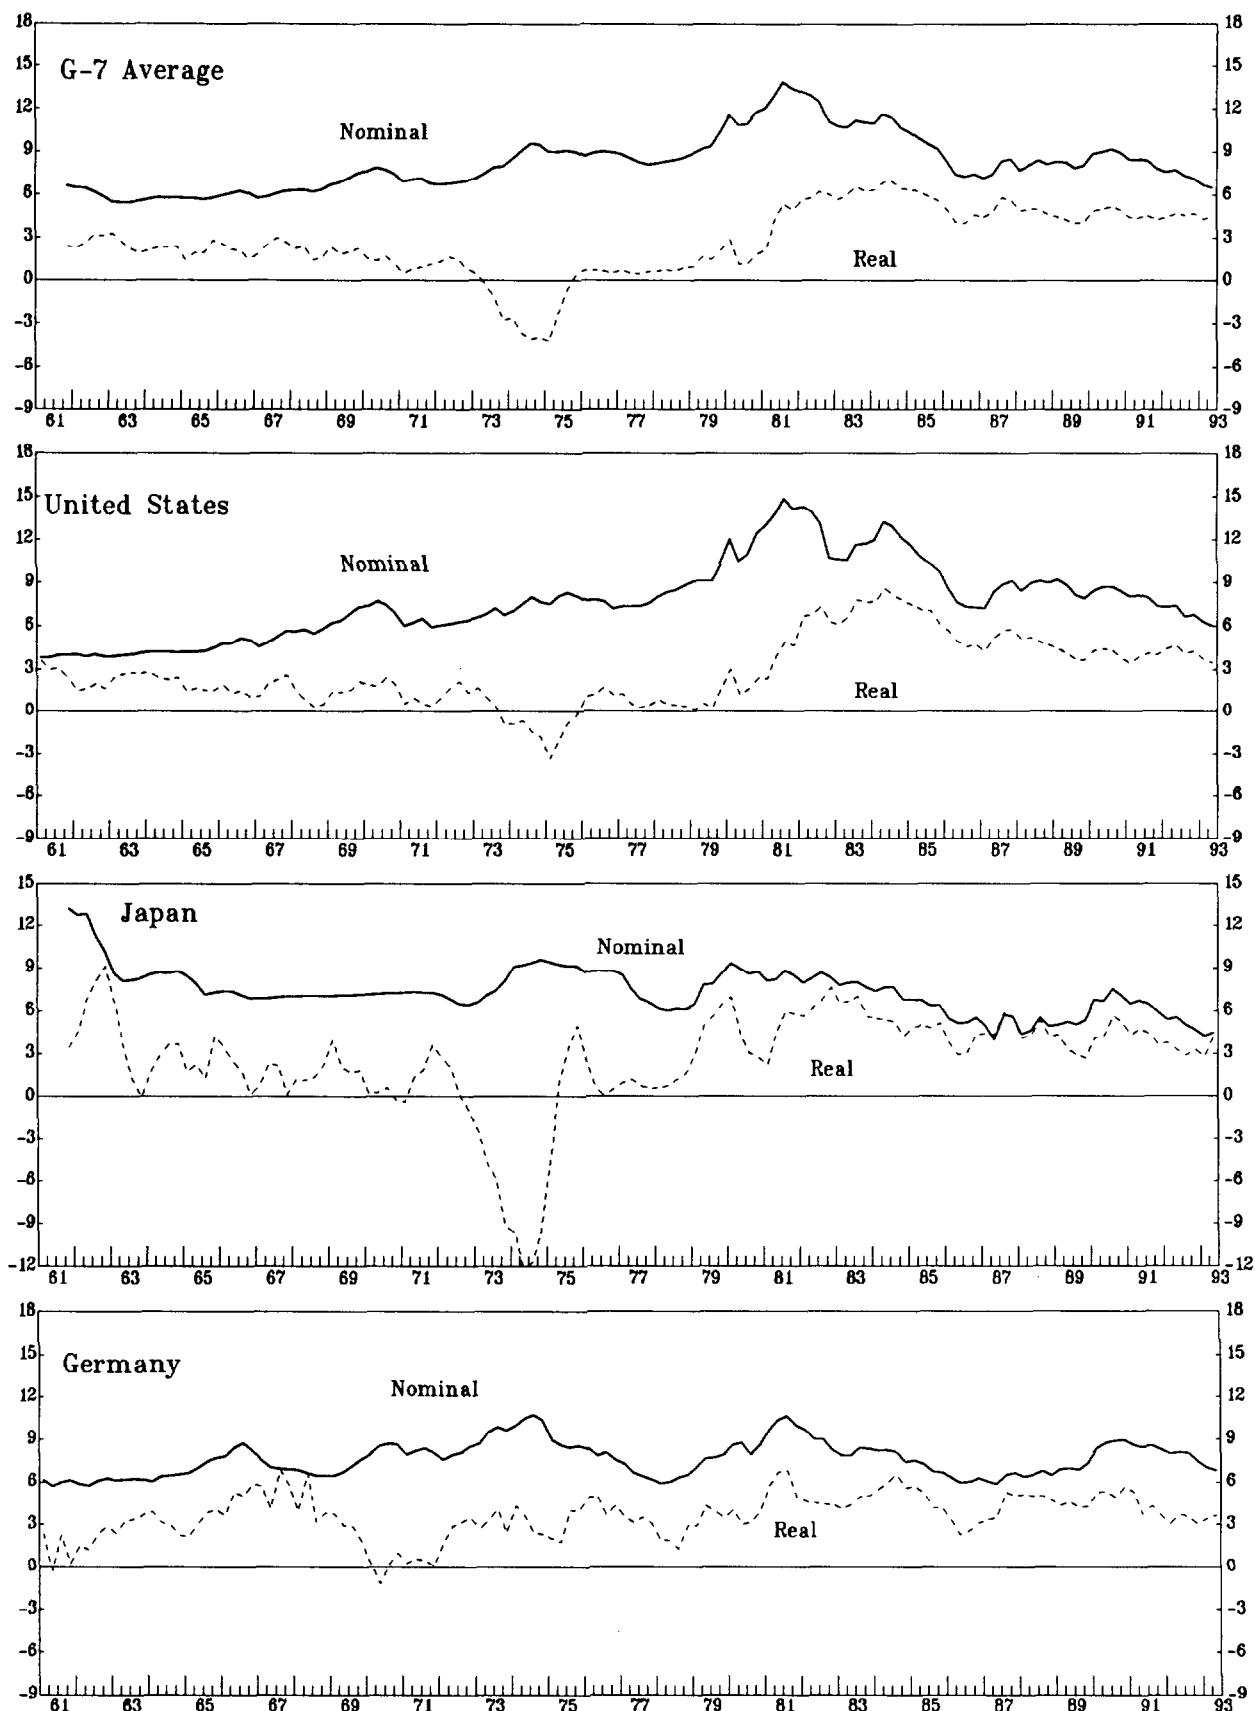

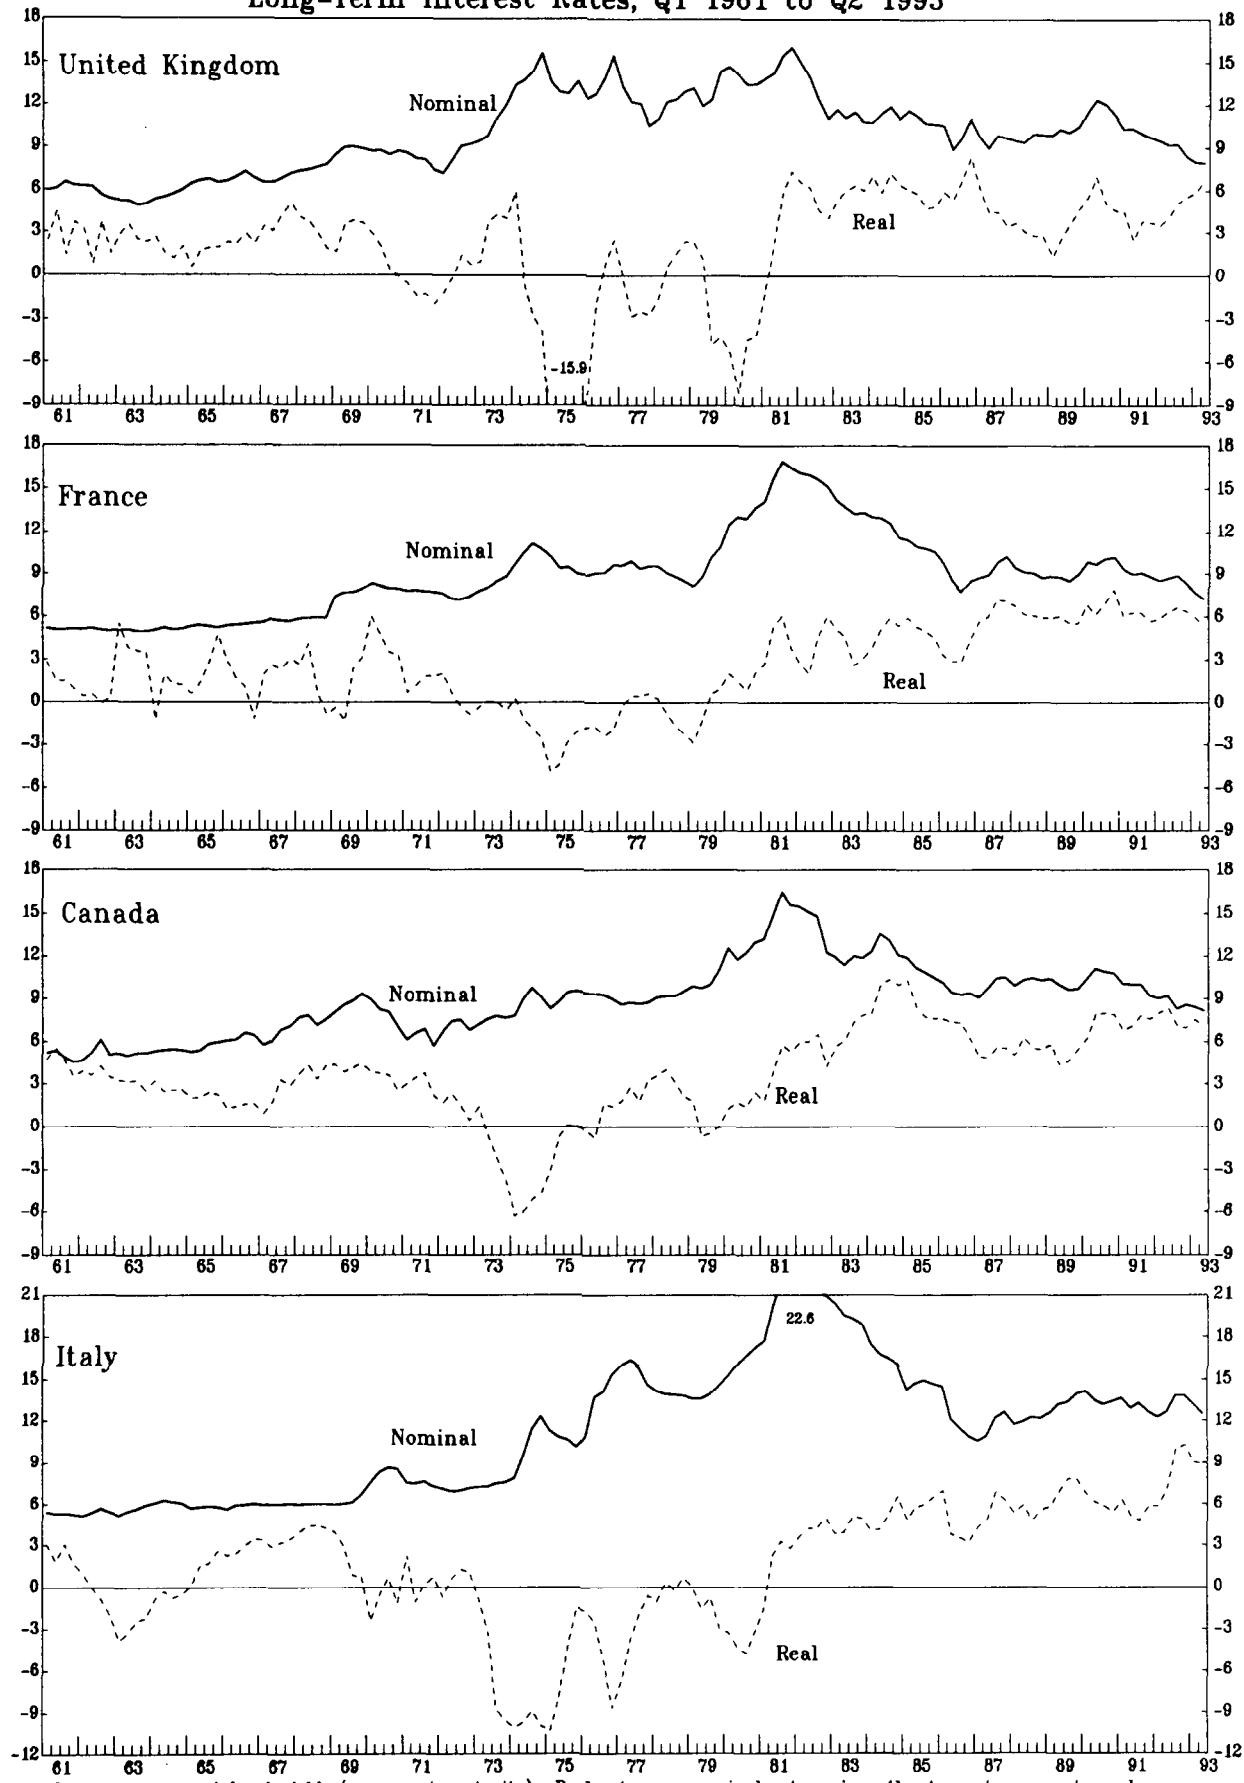

Chart 14 (concluded). Major Industrial Countries: Nominal and Real  
Long-Term Interest Rates, Q1 1961 to Q2 1993<sup>1</sup>

<sup>1</sup> 10-year government bond yields (or nearest maturity). Real rates are nominal rates minus the 4-quarter percentage change in the GDP(GNP) deflator. For definitions, see Chart 7.

Chart 15. Major Industrial Countries: Difference between Long and Short-Term Nominal Interest Rates, Q1 1961 to Q2 1993<sup>1</sup>

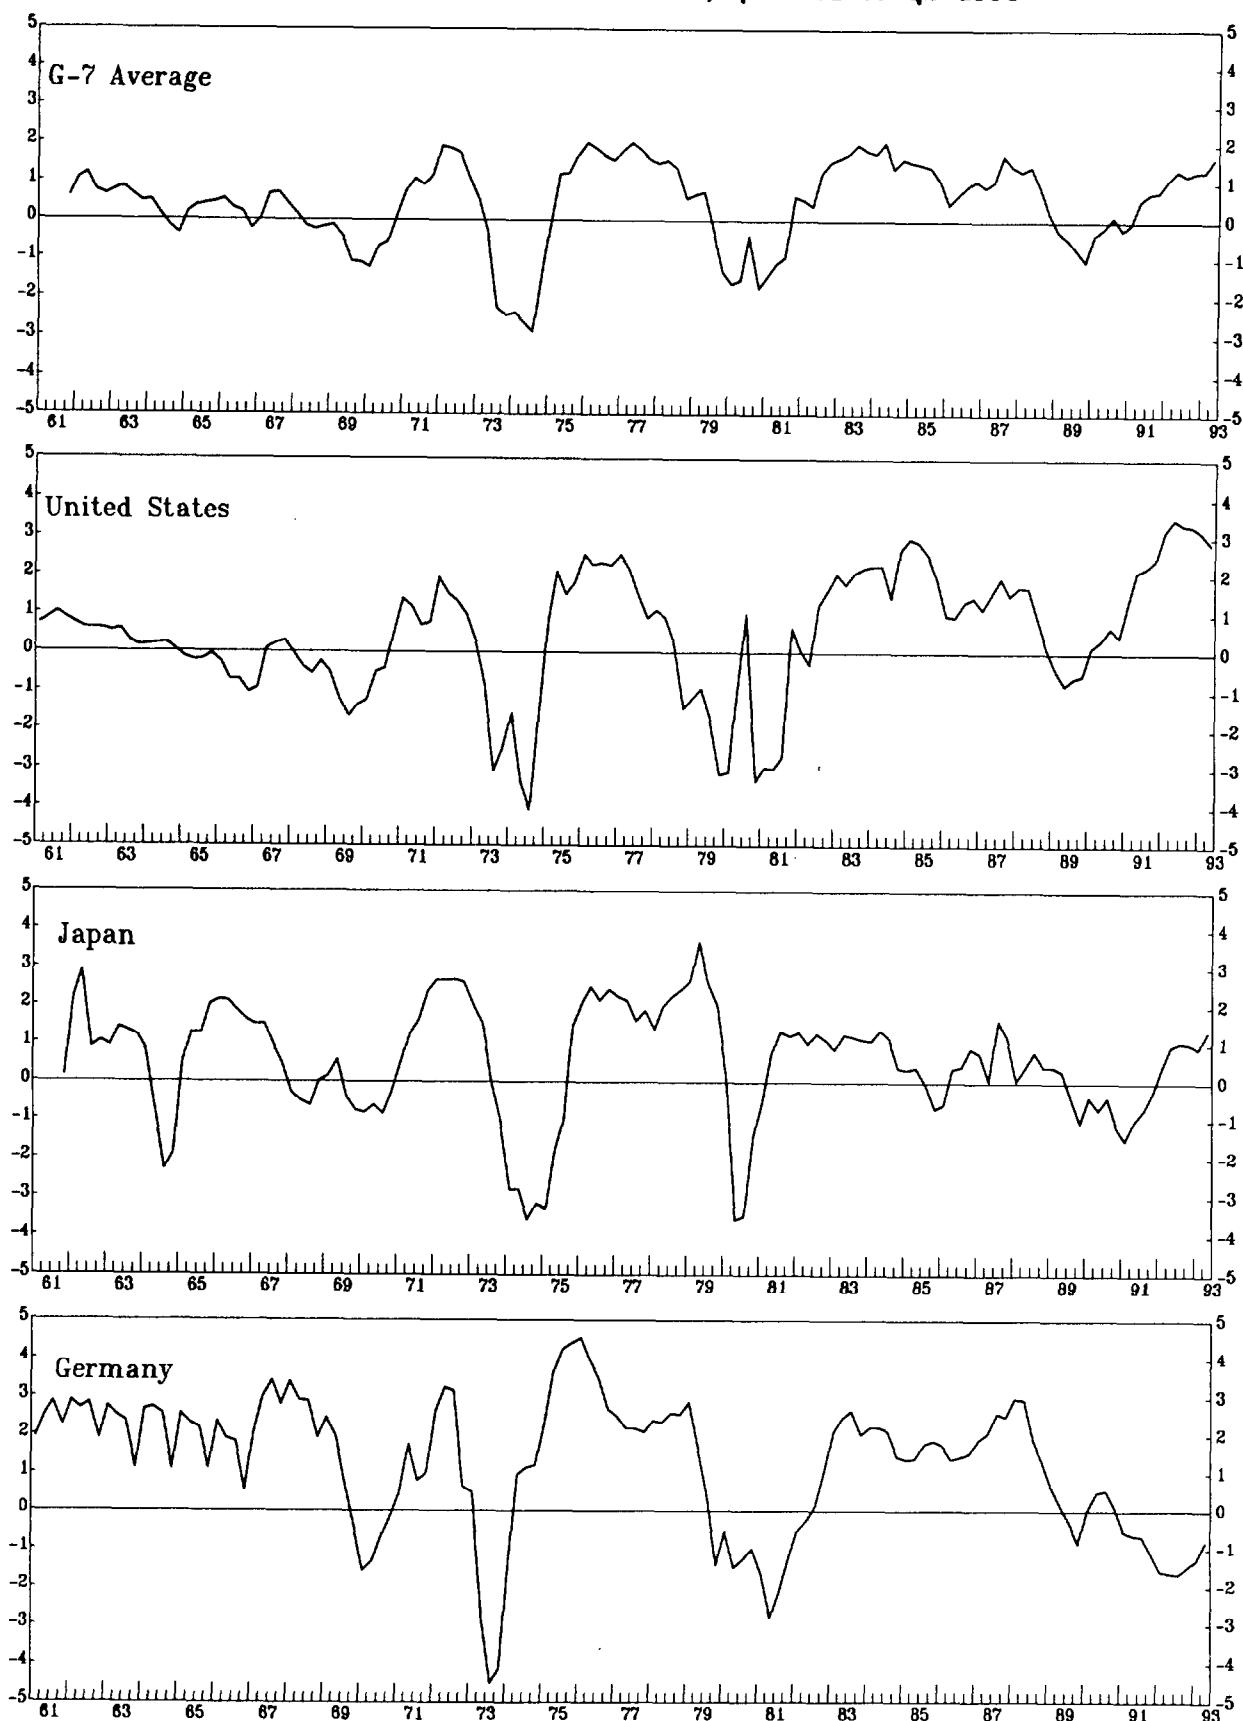

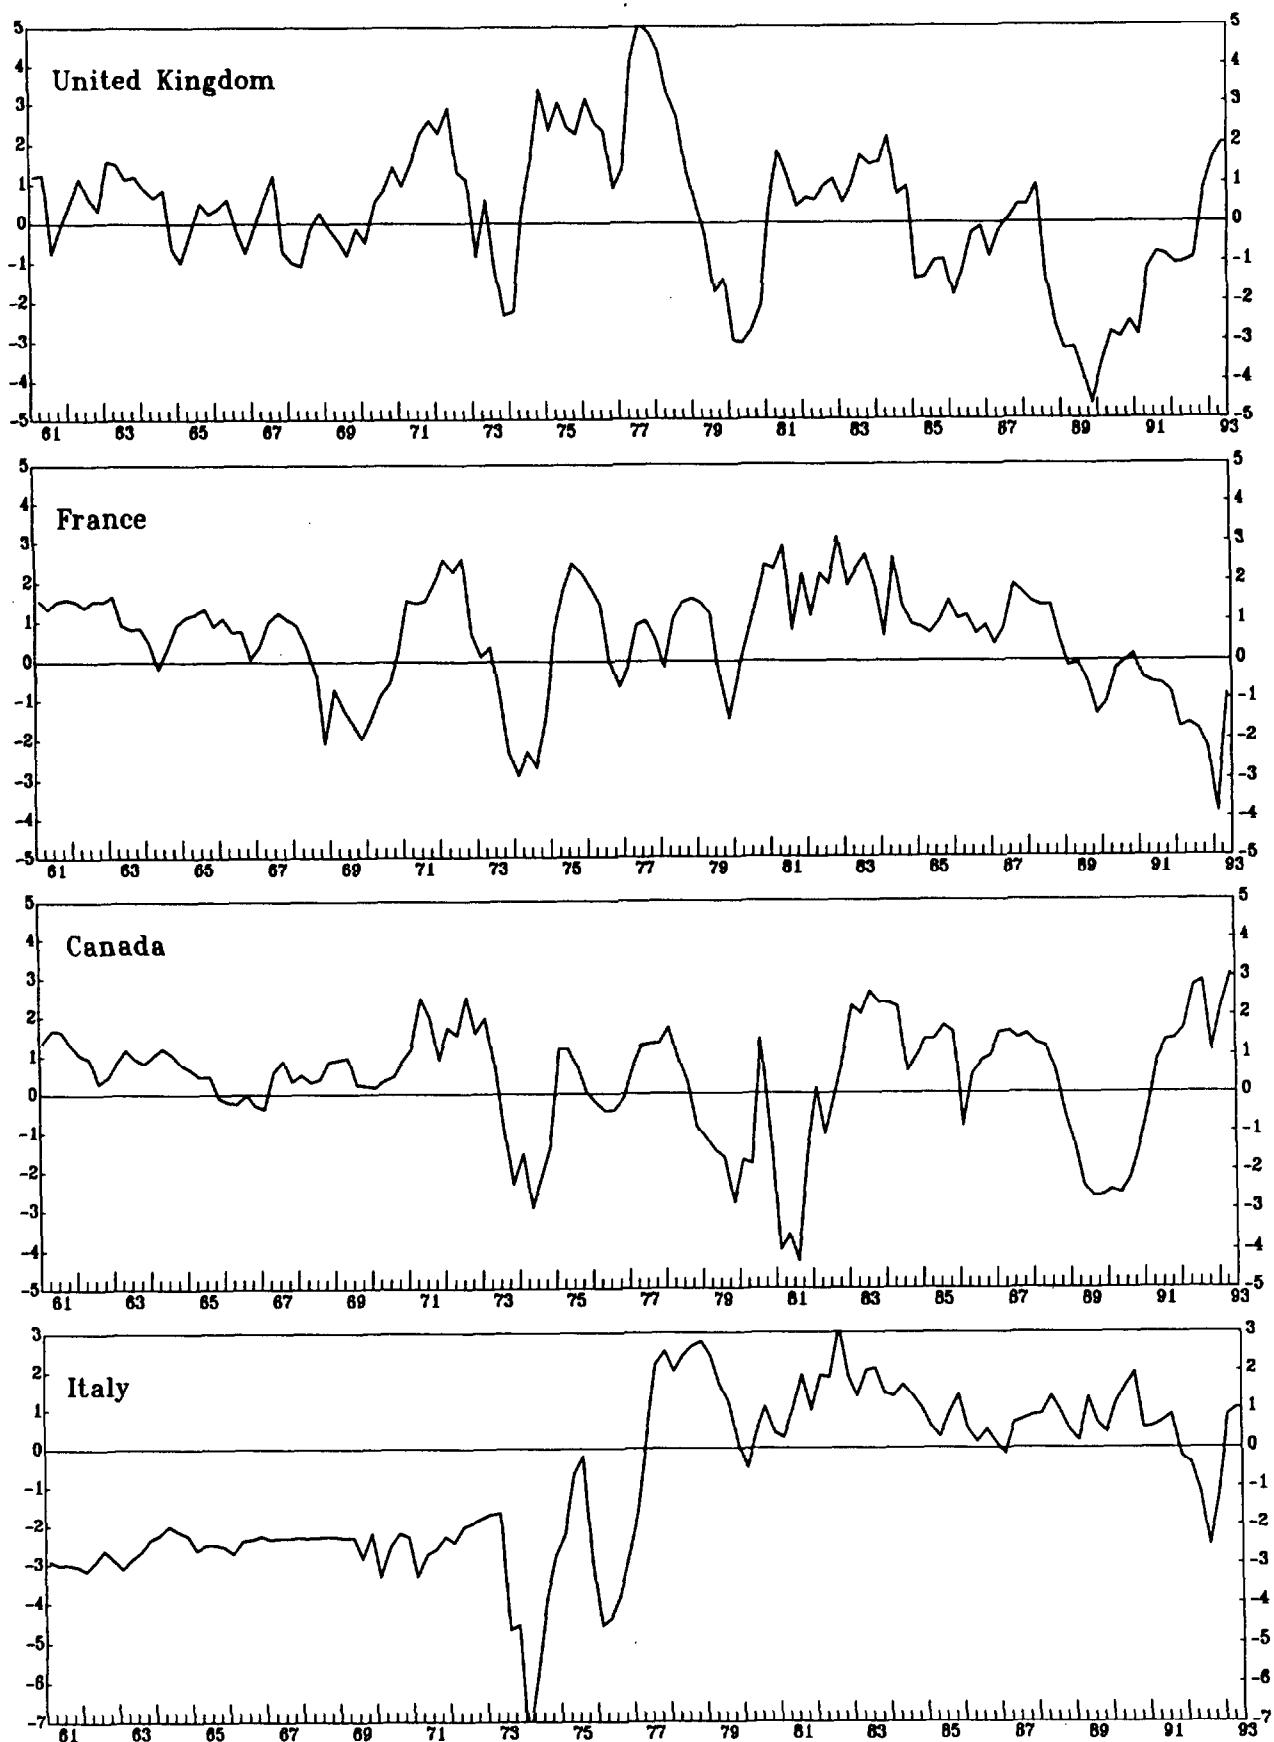

Chart 15 (concluded). Major Industrial Countries: Difference between Long and Short-Term Nominal Interest Rates, Q1 1961 to Q2 1993<sup>1</sup>

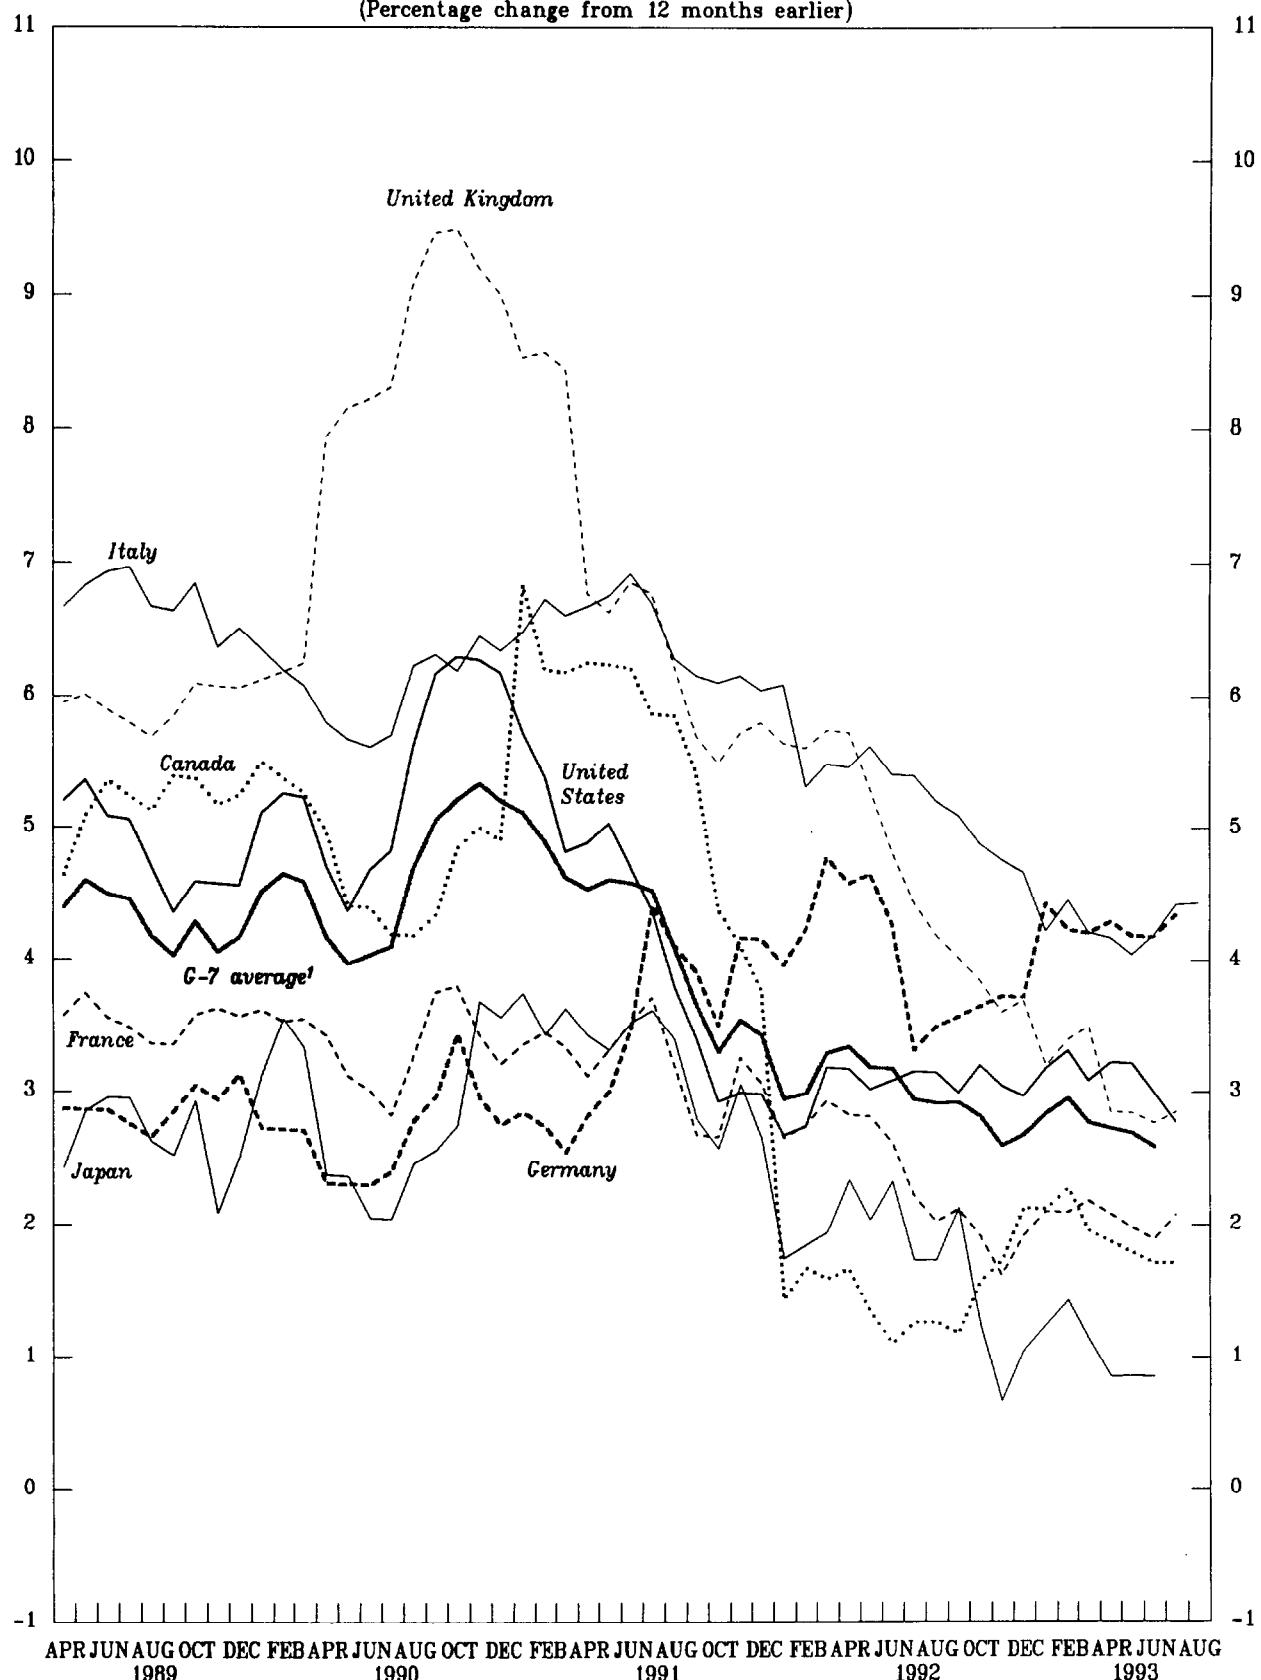

<sup>1</sup> The chart shows for each country, the difference between the long rate shown in Chart 13 and the short rate shown in Chart 12.

Chart 16. Major Industrial Countries: Consumer Price Inflation  
 April 1989 to August 1993

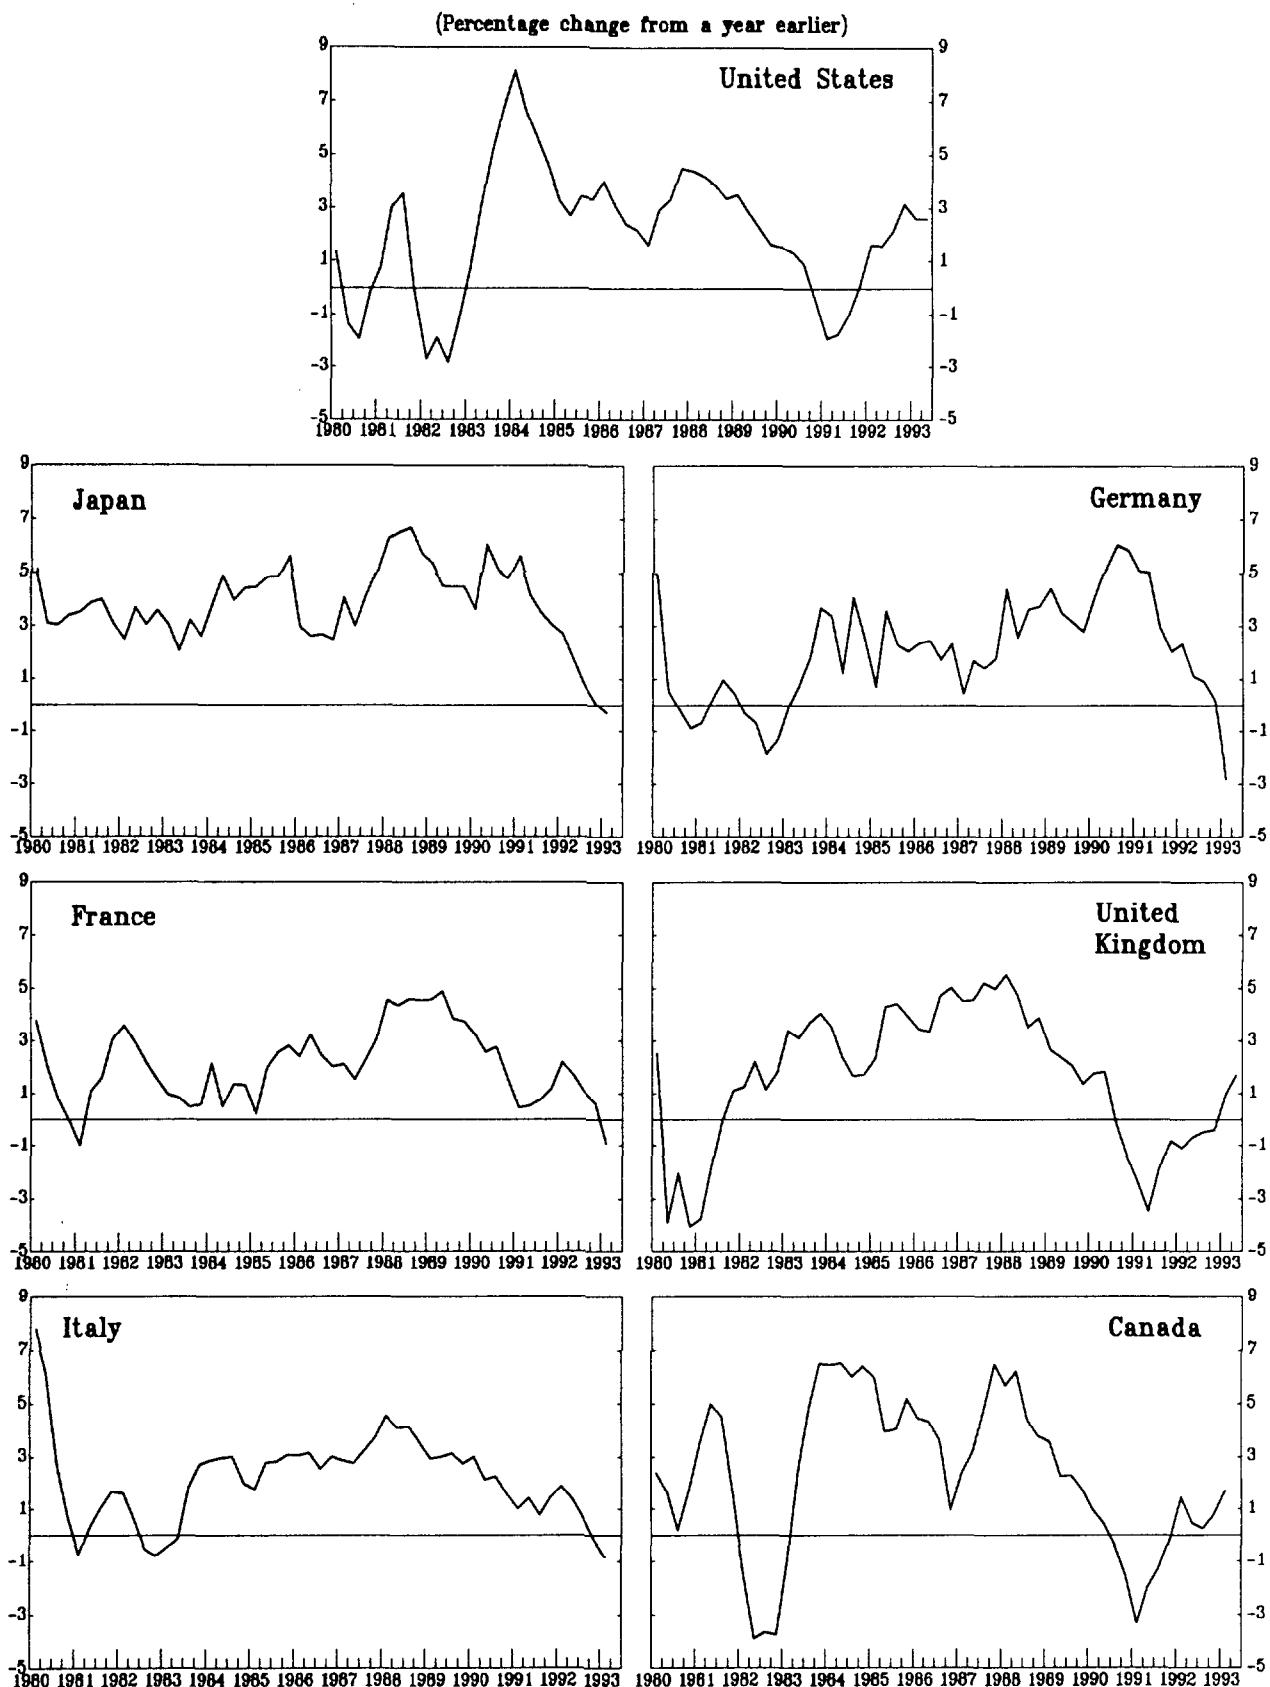

(Percentage change from 12 months earlier)

<sup>1</sup> Geometrically weighted average, 1985-87 GNP weights. Average for last month shown based on staff estimates for countries where data are unavailable.

**Chart 17. Major Industrial Countries: Growth of Real GDP**  
**First Quarter 1980 to Second Quarter 1993**

**Chart 18. Major Industrial Countries: Unemployment Rates**  
**January 1980 to July 1993**

(In percent of labor force)

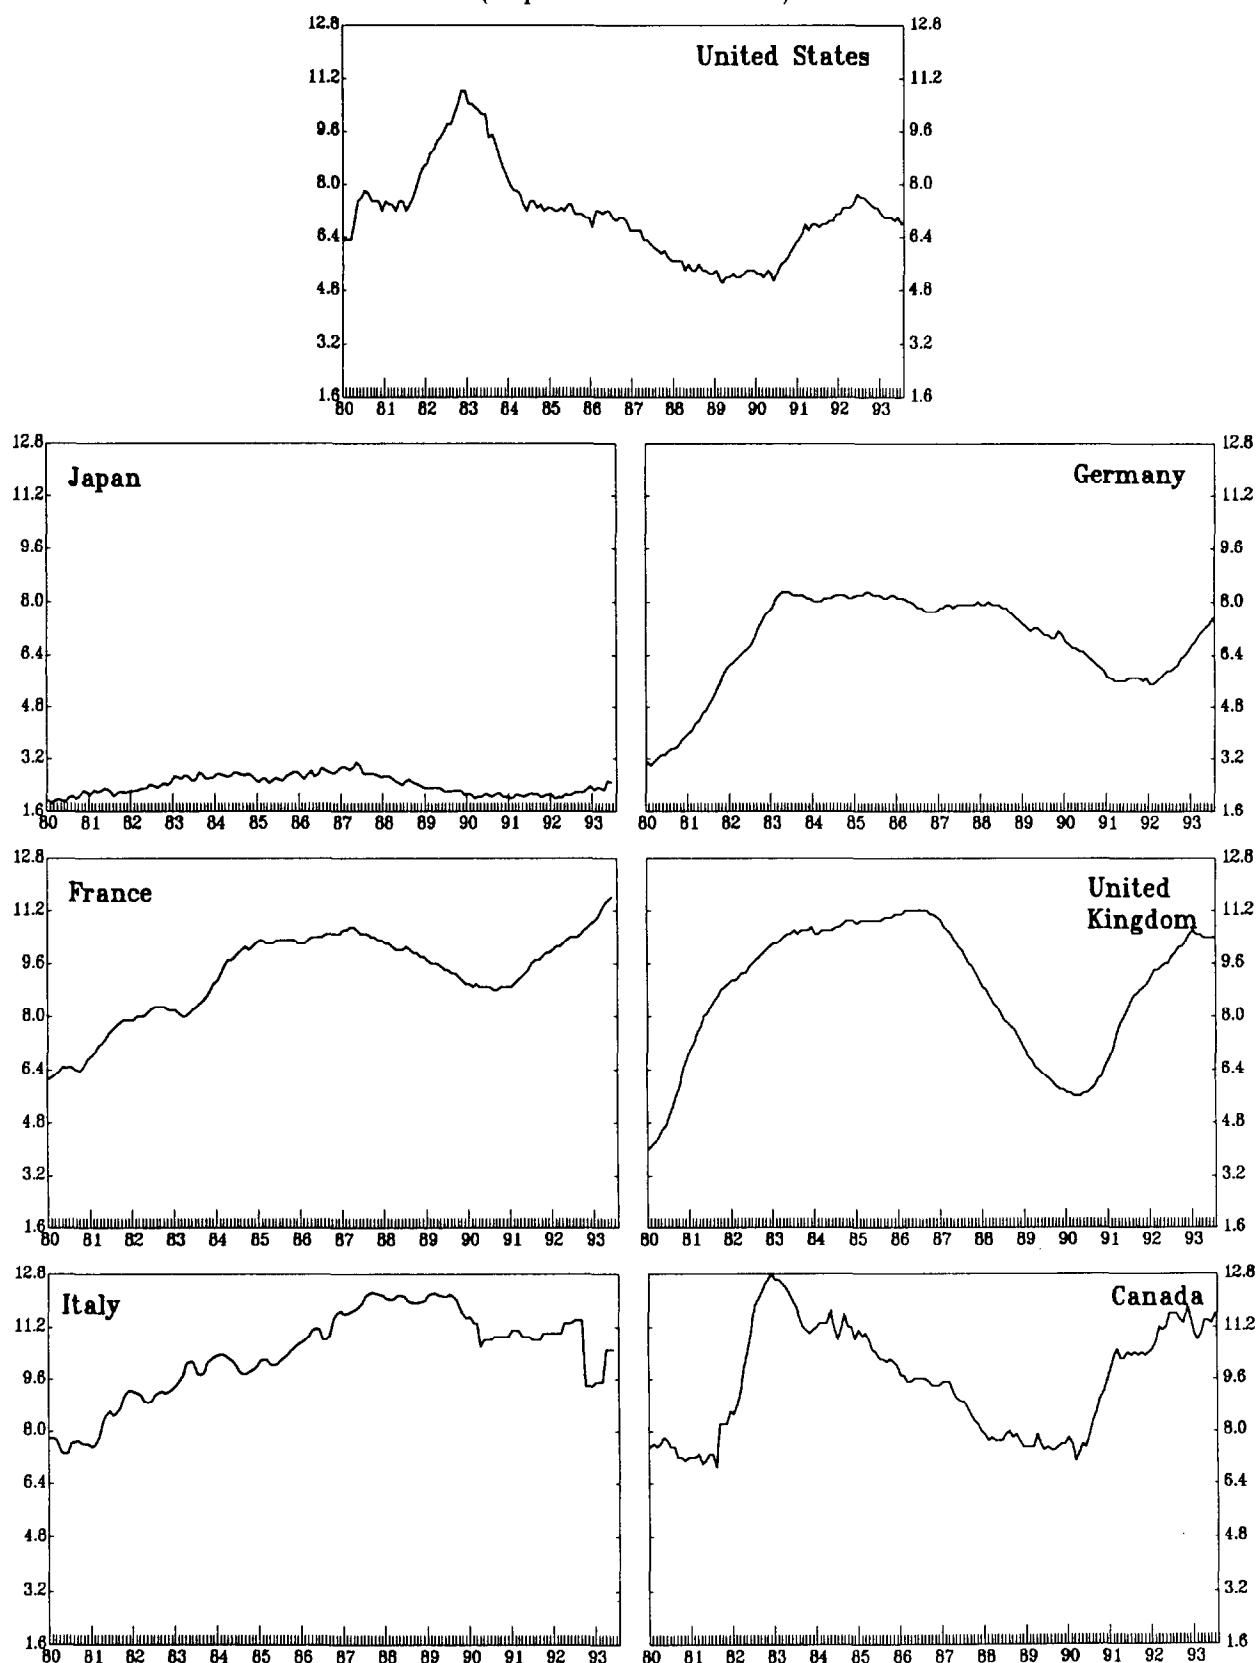

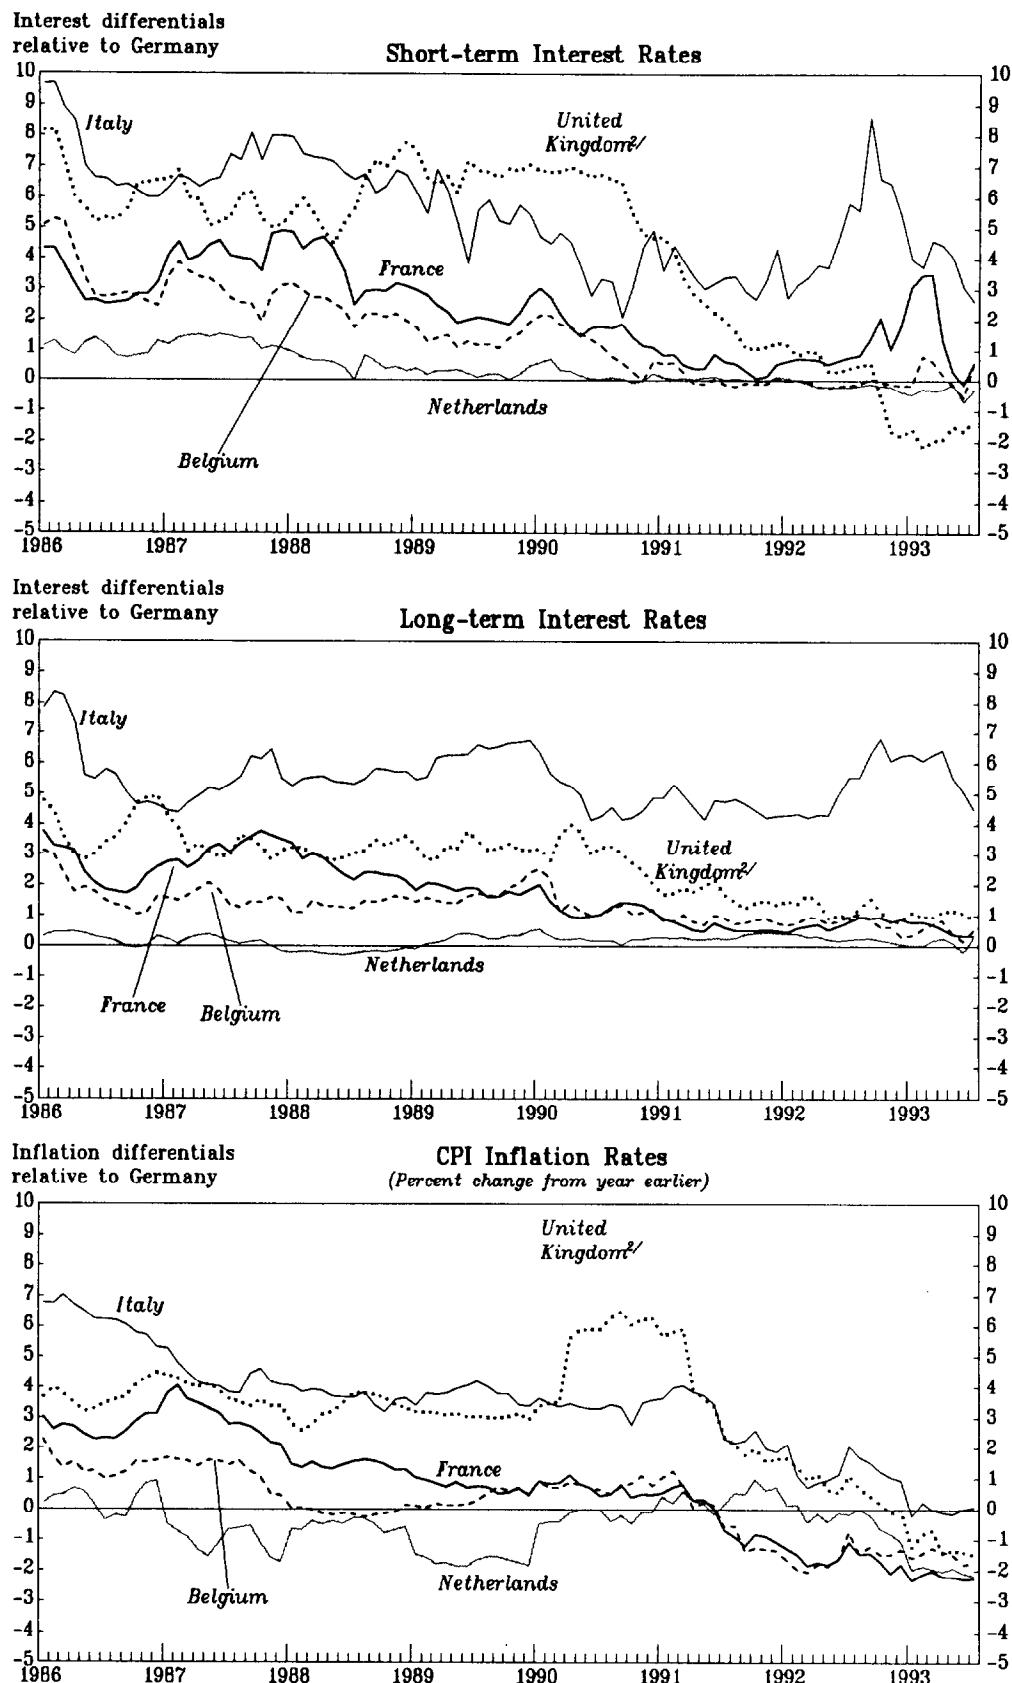

Chart 19. Convergence of Interest Rates and Inflation in the ERM<sup>1/</sup>  
 January 1986 to July 1993

1/ The chart is simplified by the exclusion of Denmark, Ireland, Luxembourg, Portugal and Spain. The interest rate data shown are monthly averages of daily data.

2/ The pound sterling entered the ERM on October 8, 1990.

Current Economic Indicators

Prepared by the Research Department

August 25, 1993

The data, which are organized by indicator, are presented in 16 tables (listed below). Following the tables there is a note on sources and methods.

In the interest of reporting the most recently available data, the updating of the tables relies heavily on staff interpretation of information obtained via international electronic news services. This information is sometimes incomplete and may be inaccurate. Every reasonable effort has been made to ensure accuracy and, as the primary sources become available, all data are checked and revised as necessary.

Tables

1. Real GDP
2. Real Total Domestic Demand
3. Industrial Production
4. Consumer Prices
5. Unemployment Rates
6. Payments Balances on Current Account
7. Trade Balances
8. Exchange Rates Against the U.S. Dollar
9. Effective Exchange Rates
10. Real Effective Exchange Rates
11. Short-Term Interest Rates
12. Long-Term Interest Rates
13. Monetary Aggregates--M1
14. Broad Monetary Aggregates
15. Leading Economic Indicators
16. Indices of Primary Commodity Prices and Petroleum

1/ Indices comprise 35 price series for 30 non-fuel primary commodities.

2/ Weights are based on 1979-81 average world export earnings.

3/ Includes forestry products. Please see note 3/ on Table 2.

4/ Index uses weights for individual commodities based on average export earnings in 1979-81 for the group.

5/ Spot crude. Average of U.K. Brent (light), Dubai (medium) and Alaska North Slope (heavy), equally weighted.

6/ Provisional.

### Sources and Methods

The data shown in the foregoing tables are based on information on 15 key economic time series for each of the seven largest industrial countries. The basic data are described in the accompanying documentation, which, for each variable: (1) describes the series used (line 1); (2) specifies whether the series is seasonally adjusted in the original source or by IMF staff (line 2); 1/ (3) identifies the "primary" source (line 3); and (4) identifies the "secondary" source when other than international press or wire services (line 4). This dual sourcing of the data, as well as heavy reliance on international electronic information services, reflects the principal purpose of providing as up-to-date economic data as possible in the report. Further, it should be noted that the choice of series has been influenced by the availability of timely information.

Two caveats about these data should be noted. First, because the basic data conform to national source series, they are not necessarily internationally comparable. Second, because both press and electronic information sources often present the latest estimates in a summary form (e.g., year-on-year percent changes), some risks are associated with updating based on such information (e.g., because the historical series has been revised). However, every reasonable effort is made to avoid these problems, which are in any case corrected once the primary data source becomes available.

Where relevant, composite series are calculated for the entire group of countries as well as for the subgroup of European countries. Typically, the composites are geometrically weighted averages of country series, using as weights the average U.S. dollar value of GNP in 1985-87. However, the composite unemployment rates are calculated using 1985-87 labor force weights. Further, in the tables on trade and current account balances, the composites are simply aggregations of individual country data after conversion of the latter into U.S. dollars.

Because of differences among countries with respect to how soon data are compiled and released, some extrapolation or "gapfilling" of missing data is required if the composites are not to be unduly out of date. In general, this gapfilling is carried out to that month or quarter for which at least four countries have data. Needless to say, the extrapolations of the individual country series are solely for the purpose of constructing up-to-date composites and are not part of the data for individual countries shown in the tables.

The extrapolation procedures vary according to the type of indicator. With respect to GNP, total domestic demand, consumer prices, money supply, and leading indicators, missing data are gapfilled by assuming unchanged year-on-year rates of change from the preceding period. With respect to industrial production, unemployment, and the trade balance, missing data are set equal to the preceding month's level, implying no change from month to month on a seasonally adjusted basis. Because of the erratic short-term movements of the series, composites are not calculated for the current account balances beyond the quarter for which data are available for all seven countries.

---

1/ All annual data are based on quarterly (or monthly) data.
