EXECUTIVE BOARD MEETING

SM/20/42

February 12, 2020

To: Members of the Executive Board

From: The Secretary

Subject: **Myanmar—Staff Report for the 2019 Article IV Consultation**

Board Action:	Executive Directors' **consideration** (Formal)
Tentative Board Date:	**Friday, February 28, 2020**
Publication:	Not yet decided*
Questions:	Mr. De, APD (ext. 34869) Mr. Deb, APD (ext. 39577) Mr. Peiris, APD (ext. 34761)
Document Transmittal in the Absence of an Objection and in accordance with Board policy:	After Board Consideration— Asian Development Bank, Asian Infrastructure Investment Bank, Food and Agriculture Organization, United Nations Development Programme, World Trade Organization

***At the time of circulation of this paper to the Board, the authorities have indicated that they need more time to consider whether they will consent to the Fund's publication of this paper. Publication will only proceed upon the receipt by the Fund of the member's explicit consent.**

INTERNATIONAL MONETARY FUND

MYANMAR

STAFF REPORT FOR THE 2019 ARTICLE IV CONSULTATION

February 11, 2020

KEY ISSUES

Context: The economic outlook has weakened in the face of stronger domestic and external headwinds, and growth remains below potential. The envisaged fiscal stimulus in the FY2019/20 is appropriate given the cyclical weakness with monetary policy anchoring inflation and external stability. Systemic risks in the banking system continue to be elevated, raising the urgency for comprehensive financial sector reform and contingency planning to preserve financial stability. The planned scaling up of infrastructure investments presents an upside risk if well managed.

Medium term prospects: Although long-term prospects remain favorable, near-term growth is likely to remain below potential as the correction in real estate market and continued uncertainty weighs on investor sentiment in the runup to the 2020 elections. Starting FY2020/21, bank deleveraging will further slow credit and constrain GDP growth as borrower's true ability to repay is revealed with term loans coming due and banks restructure in earnest. Inflation is expected to fall to 6 percent to 7 percent range in the medium term as the impact of one-off increase in electricity tariff abates.

Policy Recommendations:

- Fiscal and structural reforms will be important to boost medium-term growth, including implementation of the Myanmar Sustainable Development Plan (MSDP). Lasting progress on peace and stability remains critical to realize Myanmar's growth potential and poverty reduction. Associated fiscal risks must be prudently managed.
- Financial regulations and supervision should be strengthened to ensure financial stability, while forming contingency plans to address systemic banking risks and strengthening the resolution framework. Addressing governance gaps in the AML/CFT framework recommended by the Asia and Pacific Group (APG) is critical.
- The spike in monetary financing in September has highlighted gaps in cash management. Fiscal policy should aim to phase out central bank financing, by raising domestic revenue and increasing market-based financing of the deficit.
- Monetary conditions should be proactively managed to anchor market interest rates and control inflation. With the successful transition to the market-determined reference exchange rate mechanism, the time is right to upgrade the monetary policy framework and gradually liberalize retail bank interest rates.

Approved By
Kenneth H. Kang and Johannes Wiegand

Discussions took place in Nay Pyi Taw and Yangon during December 5–19, 2019. The staff team comprised Mr. Peiris (Head), Mr. De, Mr. Deb, Ms. Nadeem (all APD), Mr. Xiao (FAD), Ms. Iorgova (MCM), Mr. Ishiwaka (OAP), and Mr. Saker (Resident Representative), Mr. Tun (Resident Representative Office). Mr. Cowen (CDOT Director) and resident advisors joined part of the mission. Ms. Mahasandana (Executive Director) and Mr. Srisongkram (Advisor) also participated in discussions. Ms. Dao and Mr. Landicho assisted in preparing this report.

CONTENTS

ANNEXES

APPENDIX

CONTEXT

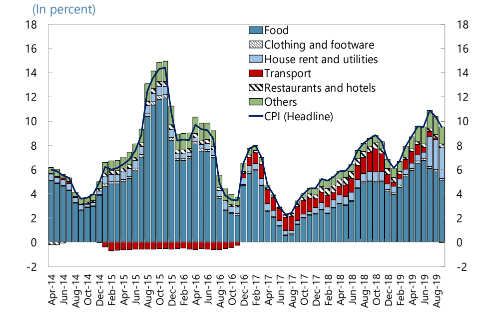
1. Despite favorable long-term prospects, the economy remains below potential and downside risks have intensified. The economic outlook has weakened in the face of weak investor sentiment despite the gradual improvement in budget execution and still robust export growth amid global trade tensions. This is partly related to the real estate market correction and uncertainties in the runup to the November 2020 elections. Systemic risks in the banking system continue to be elevated, raising the urgency for comprehensive financial sector reform and contingency planning to preserve financial stability.

2. The Myanmar Sustainable Development Plan (MSDP) forms the basis of the authorities' economic roadmap and a second wave of reforms is underway. Recent achievements include adopting a market-based reference exchange rate, the long-delayed electricity tariff reform, and the enactment of the Tax Administration Law (see Appendix I). Continued capacity development (CD) remains crucial for Myanmar to implement the MSDP reforms and transition to a market-based open economy and build institutions.

3. Prospects for progress in addressing the refugee crisis in Rakhine State ahead of the 2020 elections are limited amid rising nationalist sentiment. The 2018 Memorandum of Understanding (MoU) signed between the UN and Myanmar for a needs assessment and a process to repatriate refugees from Bangladesh has faced difficulties with renewed conflict and refugees' reluctance to return. The State Counsellor Aung San Suu Kyi's recent visit to the International Court of Justice at the Hague has bolstered domestic support but progress towards resolving the refugee crisis in Rakhine has stalled. In addition, the security situation has deteriorated in border areas and ethnic-regional tensions remain elevated.

RECENT DEVELOPMENTS

Myanmar: Contribution to Inflation
(In percent)



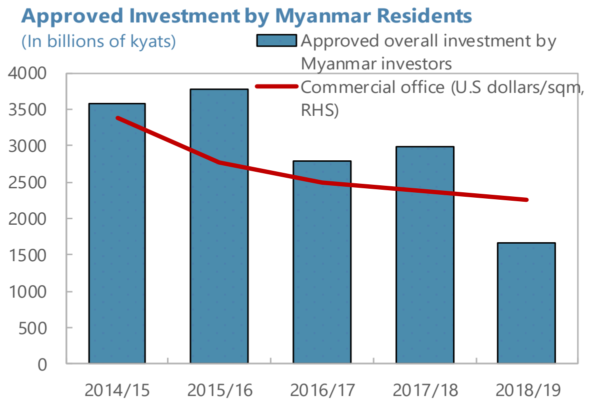
Sources: Central Statistical Organization (CSO); and IMF staff calculations.

4. Economic activity in FY2018/19 remained below potential. [1] Growth is expected to be subdued at 6.5 percent in FY2018/19, up slightly from 6.4 percent in FY2017/18 on account of a modest fiscal stimulus and a one-off increase in gas exports.[2] Domestic demand remains weak reflecting slowing credit growth, a correction in real estate prices and declining

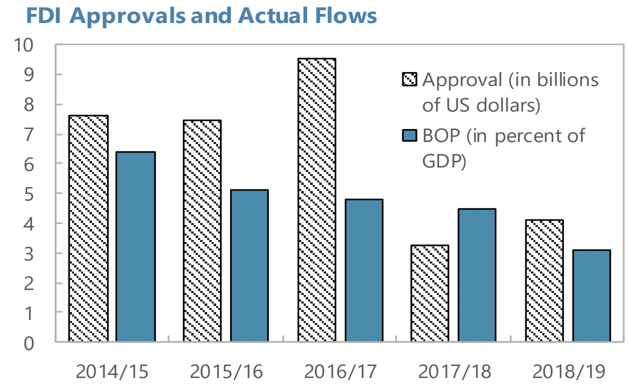
[1] Staff do not have updated estimates of potential growth due to ongoing revisions to national accounts, but growth is clearly less than the 7-8 percent estimated in 2016 Staff Report (see 2016 Article IV Consultation Staff Report (Box 2)

[2] Myanmar's fiscal year has changed from April–March, to October–September. Following a six-month transition period, from April 1, 2018 to September 30, 2018, the new fiscal year started October 2018. This report uses the new fiscal year definition for both historical data and projections.

investments. FDI inflows continue to decline as large projects have been completed amid tepid foreign investor sentiment, although FDI project approvals, a leading indicator of FDI inflows witnessed a slight uptick since its sharp decline in FY2017/18. Headline inflation stood at 8.6 percent at end-September on higher electricity tariffs (contributing over 2 percentage points) and food and fuel prices but is expected to moderate.

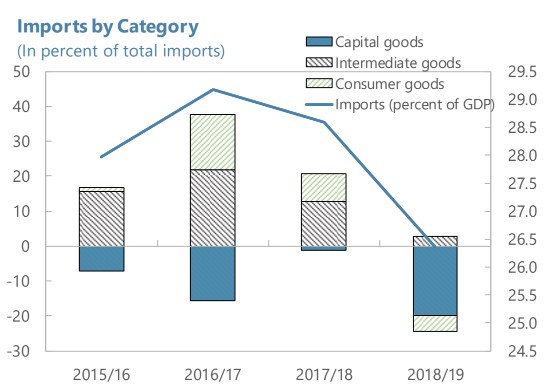


Sources: Coliers International Myanmar; DICA; and IMF staff calculations.



Sources: DICA; CBM; and IMF staff calculations.

5. **Restrained economic activity has narrowed the current account deficit.** The trade and current account deficits shrank from 5 to 3 percent and from 4 to 2 percent of GDP respectively in FY2018/19, as imports contracted sharply on lower FDI related imports, decline in iron and steel imports due to a slowdown in construction and one-off factors related to changes in automobile import regulations. In contrast, exports held up, led by garment manufacturing and natural gas, amid global trade tensions, the slowdown in China and logistical disruptions in the China-Myanmar trade corridor. The narrower deficit offset weaker FDI and other inflows. This allowed a modest buildup of FX reserves via auctions to about US$5.7 billion (3.5 months of imports) at end-September 2019. Overall, the external position in FY2018/19 was broadly in line with fundamentals and desirable policies (see Appendix II); risks of external debt and overall debt distress are low (see Debt Sustainability Analysis), but reserve coverage continues to be inadequate.

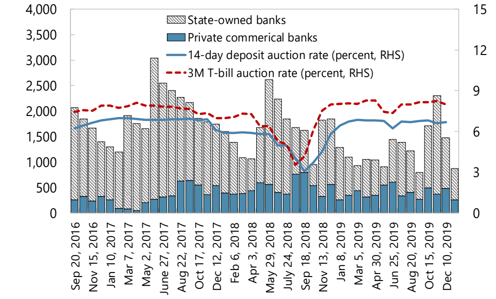


Sources: Myanmar authorities; and IMF staff calculations.

6. **Budget execution provided a modest stimulus in the last quarter.** After significant under-execution in the first three quarters, particularly on capital expenditures, spending picked up toward the end of FY2018/19. With revenues broadly in line with expectations, the fiscal deficit is estimated at 3.5 percent of GDP in FY2018/19, compared to 3 percent in FY2017/18. The rapid pick up in the deficit toward the end of the year raised sharply net CBM financing in September 2019 to 8.4 percent of last year's reserve money, above staffs' recommended 1 percent.

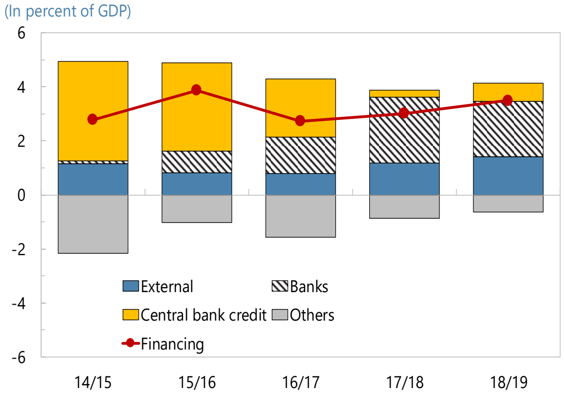
While the authorities' official target (gross CBM financing as a share of total domestic financing) may have been just met, it is a sharp reversal of the declining trend of net CBM financing observed over the last few years.[3] This partly reflects the change of the fiscal year that obscured seasonal patterns but also gaps in cash management and could have been avoided by greater domestic debt issuances through the year.

Excess Reserves in the Banking System and Auction Rates
(In billions of kyats)



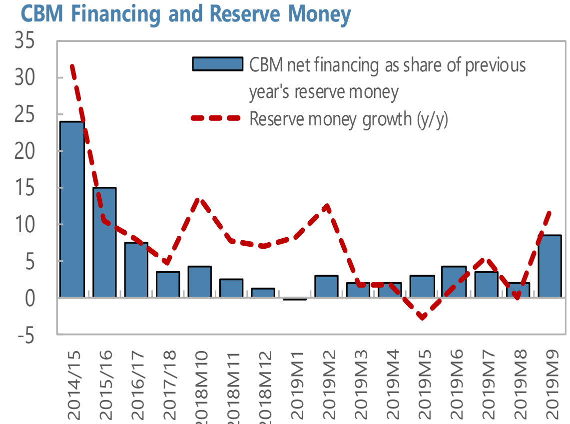
Sources: Myanmar authorities; and IMF staff calculations.

Fiscal Financing
(In percent of GDP)



Sources: Myanmar authorities; and IMF staff estimates.

CBM Financing and Reserve Money



Sources: CBM; and IMF staff calculations.

7. **Broad monetary aggregates and the exchange rate remained stable despite the temporary higher monetary financing in September.** Reserve money growth picked up at the end of the fiscal year, due to increased monetary financing but remained within target as NFA remained broadly stable. Moreover, growth in broad money aggregates, the intermediate target, moderated from 19 percent in 2017/18 to 15½ percent in September 2019 as targeted. Treasury and deposit auction rates also remained relatively stable as excess reserves of the banking system were seasonally low and reserve money growth has moderated to below 5 percent y/y since September. The kyat and REER have been broadly stable since February 2019, when the CBM formally adopted a market-determined reference exchange rate; the move has better anchored market expectations and reduced the informal market spread with limited one-way FX intervention.

8. **The slowdown in credit and correction in real estate market presented additional headwinds.** Credit growth to the private sector continued to slow amid private bank deleveraging but is still robust at 16 percent in the year to end-September 2019, down from 21 percent a year

[3] FY2018/19 was likely the first year that gross and net CBM financing deviated as there were accumulated government deposits at the CBM from the 6-month transition budget year (April to September 2018) when budget execution was exceptionally weak.

earlier. The higher than expected credit expansion is supported by banks' steady deposit growth and the CBM's directive giving banks more time to meet large exposure limits and minimum capital adequacy levels. Overdrafts have continued to decline as envisaged by the 2017 prudential guidelines while banks face difficulties in recovering real estate collateral from NPLs. Real estate prices have also continued to correct from elevated levels, with some further pressures from the tightening in credit conditions and supply coming online. Anecdotal evidence suggests that rental rates may have declined by 50 percent and condo prices by 30 percent, with further declines likely as under-construction projects are completed. Land prices have reportedly adjusted less, with owners and collateral holders unwilling to take large haircuts for now.

OUTLOOK AND RISKS

9. Although long-term prospects remain favorable, the dividends from the first wave of economic reforms is waning and legacy issues are coming to the fore. Implementing the second wave of reforms as articulated in the MSDP is needed to sustain growth and achieve the SDGs. Despite Myanmar's growing demographic dividend, competitive labor force, and strategic location, GDP growth since 2015 has moderated and reflects a new normal.[4] Revenues from natural gas extraction have been declining and will not be able to support the high public investment that drove growth in the past.[5] The scaling up of infrastructure projects including the China-Myanmar Economic Corridor (CMEC) and the East-West corridor could help realize Myanmar's growth potential by further integrating in regional supply chains (see Selected Issues 2018). On peace and stability, addressing regional disparities and conflict in affected regions remains a priority (see Selected Issues 2018), including the resettlement of refugees in Rakhine state. Legacy issues in the banking system continue to pose financial stability risk, raising the urgency for financial sector reform and

Gas Exports

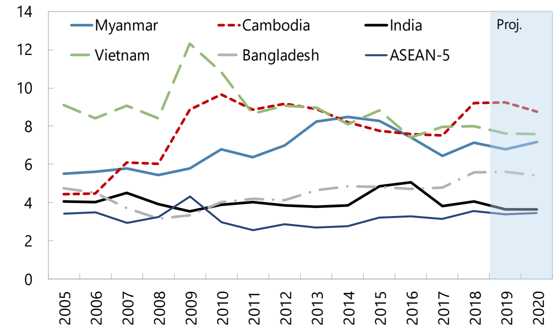
Public Investment
(In percent of GDP)



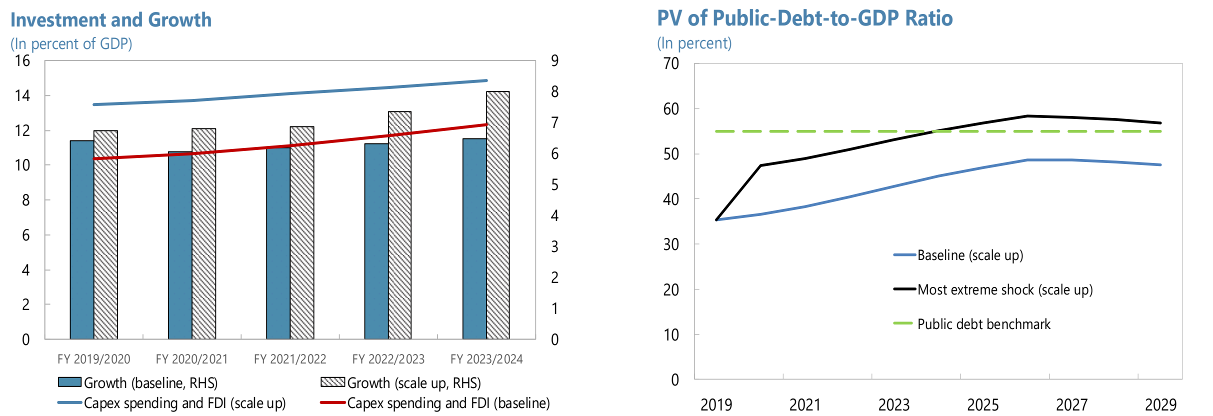
Source: IMF's *World Economic Outlook* database.
Note: ASEAN-5 includes Indonesia, Malaysia, Philippines, Singapore, and Thailand.

10. The near-to-medium-term growth outlook is likely to remain less favorable than the last decade's. Growth in FY2019/20 is expected to moderate slightly to 6.4 percent as continued uncertainty weighs on investor sentiment in the runup to the 2020 elections. Despite weakness in investments, domestic demand is supported by the fiscal stimulus envisaged in the FY2019/20 budget, which is appropriate given cyclical weakness. External demand is expected to provide a drag as the current account is projected to widen as the effects of one-off factors abate. Starting FY2020/21, bank deleveraging is likely to slow credit and GDP growth as legacy problems are addressed and borrower's true ability to repay is revealed with term loans coming due and banks restructure in earnest to comply with capital adequacy and large exposure limits by August 2020. As a result, medium term growth is now projected to be lower than previously envisaged given the delayed restructuring and weaker property market. Inflation is expected to fall to 6-7 percent range in the medium term as the one-off increase in electricity tariff and pressures from rising food prices abate.

11. Risks to the outlook have shifted further to the downside (Appendix I). On the domestic front, inflation could accelerate if fiscal financing does not sufficiently cover the budget deficit and raises CBM financing. Rising NPLs and undercapitalization in some private banks could precipitate system-wide distress with large macrofinancial spillovers (see below). Renewed conflict and limited progress on the ongoing refugee crisis would continue to limit donor financing and dampen investor sentiment. Project financing from large creditors is based on recent trends but could also surprise on the upside and boost growth as infrastructure is scaled up. On the external front, risks include the impact of global trade tensions, higher crude oil prices, a slowdown in China, and climate change and disasters. The economy is also exposed to risks from the novel coronavirus mainly through tourism.[6]

12. The planned scaling up of infrastructure and human capital spending and full implementation of the MSDP present an upside risk. To support achieving the Sustainable Development Goals (SDGs) by 2030, large infrastructure projects relating to electricity, gas, road and railways and ports are envisaged in the medium term. The planned scaling up investments could amount to as much as 3 percent of GDP per year over five years, funded predominantly from ODA and PPPs, and could raise growth by 1.5-2.0 percent over the medium-to-long term.[7] SDG-related spending gaps are estimated to be large in Myanmar (Appendix VII; Myanmar 2018 Article IV consultation) and expenditures are gradually scaled-up in the upside scenario reflecting absorptive capacity constraints. However, given the weaknesses in the public investment management framework and limited experience with PPP financed investment, significant fiscal structural reforms would be needed for this scenario to materialize and manage associated fiscal risks (see Debt Sustainability Analysis – staff scenario analysis).

Scaling Up Scenario



Sources: Myanmar authorities; and IMF staff estimates.

Source: IMF staff estimates.

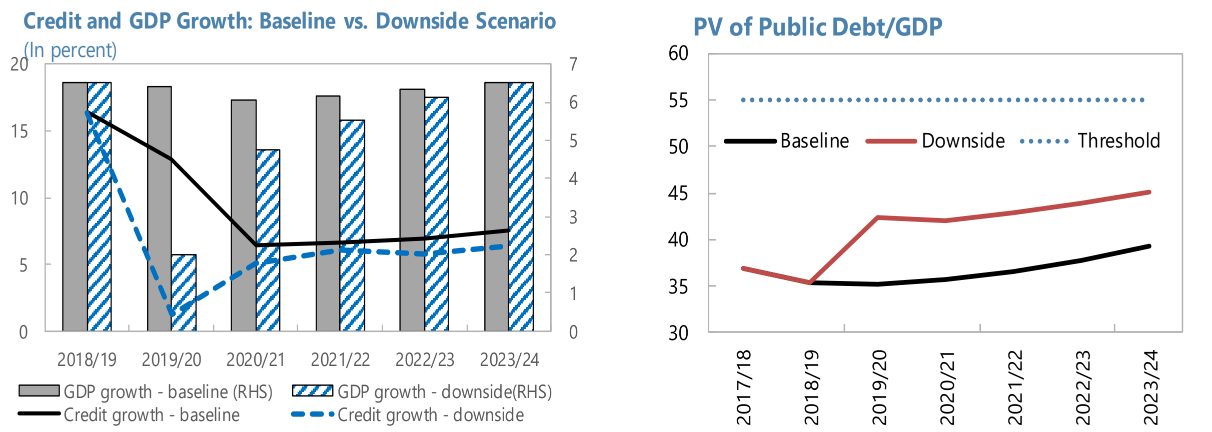
13. Conversely, macro financial spillovers from banking stress could be large. An illustrative scenario calibrated to cross-country experience suggests that in an event of bank distress, as observed in Myanmar's 2003 episode, deposit withdrawals could leak to the large informal FX market, given the lack of alternative assets and weak enforcement of existing capital controls. Output and credit growth could decline significantly relative to the orderly deleveraging assumed in the baseline, by as much as 4½ percentage points and 10 percentage points respectively, with

[6] In FY2017/18, revenue from international tourism was 2.6 percent of GDP, with the number of Chinese tourists doubling in FY2018/19 to reach 17 percent of total foreign visitors.

[7] The scaling up is drawn from development partner studies on electricity and transportation infrastructure gaps, investment needs to achieve the SDGs, and the authorities' intentions.

higher inflation, a more depreciated exchange rate, and large FX reserves losses; however, public and external debt would remain below their DSA risk thresholds.

Banking System Stress Scenario: Baseline vs. Downside



Sources: Myanmar authorities; and IMF staff estimates.

Authorities' Views

14. The authorities broadly agreed with staff's view of the recent developments and outlook. The subdued growth was attributed to several external factors including delays in project implementation and tepid investment, and continued correction in the real estate market. They opined that FY2018/19 GDP could surprise on the upside owing to a pickup in government spending at the end of the fiscal year and increase in tourist arrivals. The authorities are carefully considering large infrastructure projects, including the China-Myanmar economic corridor, to benefit from Myanmar's strategic location while ensuring debt sustainability. They were hopeful of a pickup in FDI and investment over the next few years. The authorities appreciated the quantitative risk scenarios and policy trade-offs outlined by staff. They recognized the severity of the downside scenario and were keen to realize the gains envisaged in the upside scenario through full implementation of the MSDP.

FINANCIAL SECTOR AND MONETARY POLICIES TO SAFEGUARD FINANCIAL STABILITY

A. Developing a Financial Sector Strategy

15. The process of addressing legacy asset quality problems in the banking sector is slowly moving forward, but vulnerabilities remain. The adoption of new prudential regulations in 2017 was a critical first step to start tackling systemwide vulnerabilities. Banks have continued to make progress switching from overdraft into term loans and appear to have met the July 2019 target of 30 percent of total lending set by the CBM. But the re-underwriting has led to a rise in NPLs, which, coupled with weaker real estate valuations, have stressed banks' already weak capital positions. The terms of the 3-year loans re-underwritten after the overdraft conversion include large bullet payments in some cases that are likely to pose repayment challenges. Moreover, specific provisioning for NPLs and required general provisions have been unevenly enforced. The loan-loss provisions could hence be substantially higher than reported going forward. Some banks including a few systemic private banks, have raised capital including through subordinated debt and minority stakes by foreign banks as allowed by the prudential regulations. However, the recapitalization needs could be quite large and unevenly distributed in a few banks that possess a disproportionate share of large legacy loans, making a purely private sector solution unviable and necessitating public support.

16. Financial reporting by banks does not adhere to international standards as yet, putting a greater onus on enhanced financial sector surveillance and supervisory oversight. All banks are in the process of finalizing their end-September 2019 annual financial statements as required under the Financial Institutions Act of 2016 and the 2017 prudential guidelines; this should give a clearer picture of their financial position including earnings that would no longer accrue interest on NPLs.[8] At the same time, some banks are restructuring delinquent loans into new loans at lower interest rates with step-in rights for the bank to take possession of the underlying collateral ("step in") in 180 days without resorting to lengthy court processes. The legal basis and accounting treatment of these loans will need to be evaluated. Though potentially facilitating collateral recoveries, rapid accumulation of real estate assets on the bank's books would raise systemic risk from a downward shift in realizable real estate values. While progress has been made in strengthening on- and offsite bank examinations and introducing of risk-based supervision with Fund TA, compliance and enforcement including judicious use of penalties remain at early stages.

[8] Currently, domestic banks still use a cash-based accounting approach, but a local version of IFRS is due to be in place by all banks in 2022. Two smaller banks are currently starting to implement IFRS on a pilot basis supported by donor assistance. Progress amongst banks is generally constrained by inadequate IT and human resources.

17. Developing a comprehensive financial sector reform strategy is urgently required to safeguard financial stability. It is important to ensure that asset quality issues are tackled head-on: otherwise clean-up costs would be higher, taking a heavy toll on the economy. The CBM has extended the period for banks' compliance with capital adequacy and large exposure limit requirements to August 2020. During this extension, the CBM should ensure that banks maximize recoveries and book loan losses, adequately provision and rebuild capital and encourage banks to restructure viable loans. Given the potentially large macrofinancial spillovers from banking stress illustrated above, it is critical to start addressing gaps in the legal framework and building the institutional elements to fulfill key financial stability priorities. These include effective mechanisms to ascertain banks' true health; enable loss recognition and provisioning (including supportive tax provisions), orderly deleveraging, and recapitalization; and putting in place effective resolution mechanisms that limit spillovers while protecting small depositors. Immediate priorities are:

- *Phase out remaining forbearance and prepare for restructuring.* To this end, banks' submissions of large exposures and capital improvement plans should be reviewed to ensure that they are sufficiently ambitious and realistic, and their implementation monitored closely.

- *Asset quality reviews (AQRs) and risk monitoring.* An independent AQR of the top private banks by international specialists should be prioritized, given long lead times, to determine banks' asset quality and capital needs and enable the authorities to make informed policy decisions on resolution options.

- *Supervisory oversight should be strengthened.* The authorities should establish appropriate processes for high-frequency monitoring of credit and liquidity risks, building on progress made towards greater risk-based supervision.

- *Limits on banks' exposures to real estate and large corporate borrowers.* The authorities should take gradual steps to limit banks' excessive real estate holdings and facilitate their speedy disposal at market prices. Should the AQR identify a systemic problem with the viability of large corporates, there may be merit in a centralized solution for corporate restructuring within a proper governance framework.

- *Establishing an operational framework for emergency liquidity assistance (ELA) and resolution.* The authorities should strengthen their capacity, policies and procedures for emergency liquidity support for solvent banks (that differs from day-to-day liquidity management) and bank resolution framework including by establishing a dedicated restructuring group within the CBM.

- *Contingency planning and macroeconomic policies should financial stability risks materialize.* Public support and a credible policy package may be required to instill confidence in the banking system and exchange rate to protect the external and fiscal position. This would require setting up proper coordination mechanisms between the CBM and the Ministry of Planning, Finance and Industry (MOPFI). Supportive fiscal and monetary policy, and an external financing backstop would also be important to anchor expectations and respond to disorderly market conditions.

- *Addressing the health of non-systemic private banks and state-owned banks.* Non-systemic banks that are insolvent would need to be promptly resolved and undercapitalized state-owned banks restructured, guided by the World Bank's restructuring strategy.

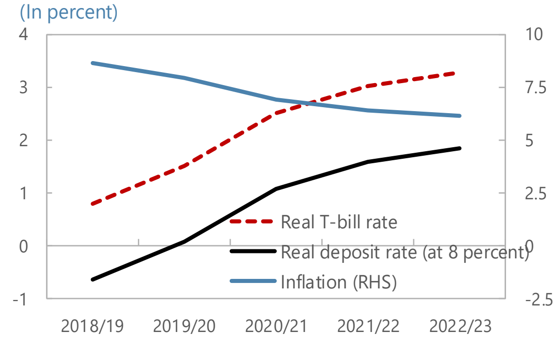
Authorities' Views

18. The authorities are committed to improving financial supervision and addressing systemic risks. The CBM noted progress made in converting overdrafts to term loans and were confident that most banks would meet capital adequacy and large exposure limits by August 2020. CBM also recognized the importance of seeing through the implementation of prudential regulations and their role in monitoring and enforcement. They agreed that timely recapitalization would be key to maintain confidence in the banking system and highlighted that some capital injections has taken place through the avenues provided by the CBM. AQRs could play a useful role in identifying the "true" financial position and restructuring options for some banks. While acknowledging the use of "step-in contracts" by some banks, they noted that the CBM has not approved their use. Uncertainties over the proper adherence by banks to international accounting standards and on the capacity or willingness to pay of large borrowers pose a challenge to enforcing credible capital improvement plans. They agreed that a well formulated financial safety net and contingency plans were needed to safeguard financial stability.

B. Upgrading the Monetary Policy Framework

19. Monetary conditions should be proactively managed to anchor stability. Inflation has recently spiked mainly due to supply side factors, notably the doubling of the electricity tariff. However, broad money growth (intermediate target) remains below target despite the September spike in monetary financing. The CBM should maintain the current monetary stance of market rates at slightly positive real terms despite a negative output gap to anchor external stability and inflation expectations. Inflation is projected to fall to mid-single digits as broad monetary aggregates continue to moderate supported by the phasing-out of CBM financing and positive real interest rates. Greater coordination between line ministries, MOPFI and CBM could also lower the risk of underfunding of the budget and excessive interest rate volatility. To enable this, it is important to improve liquidity forecasting and actively undertake open market operations to keep money growth contained and interest rates well anchored.

Inflation and Real Interst Rates
(In percent)



Source: IMF staff estimates.

20. Upgrading the monetary policy framework and gradual interest rate liberalization would allow CBM to better respond to shocks. With the successful transition to the market-determined reference exchange rate mechanism, the time is right to move to a more active and credible monetary policy framework (Appendix III). A firm commitment to phase-out monetary financing of the deficit (keeping it under 1 percent of last year's reserve money in the interim) is important, and staff recommended adhering to eliminating CBM financing in FY2020/21 as originally communicated to parliament. There is also a need to support the development of deep and liquid money and FX markets. Priorities include:

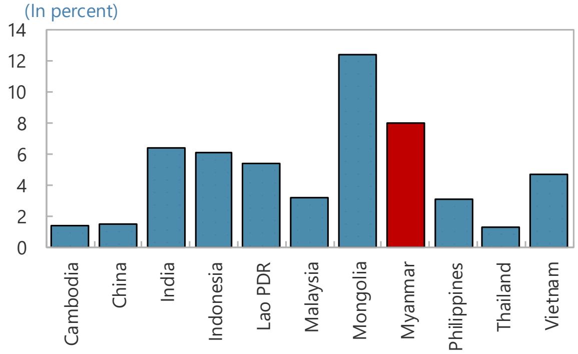
- *Establishing an interest rate corridor to guide short-term interest rates*. The lower band of the corridor would be established by the introduction of interest on excess reserves (IOER) at the CBM. The upper band would be the rate on the existing discount window facility. It is important that the CBM clarifies the discount window's purpose and eligibility criteria (as a monetary policy tool rather than a lender of last resort), duration (overnight), and permissible collateral. This would be independent from any lender of last resort facility which would have separate eligibility requirements and terms. Within this corridor, active liquidity management using deposit auctions and expanding the use of repos can help develop a reliable yield curve.

- *Enhancing monetary policy formulation and communication* by establishing a broad inflation objective; clarifying the decision-making process through a monetary policy committee; and regular reviews and communication of the monetary policy stance.

- *Gradually liberalizing commercial banks' deposit and lending rates*, commensurate with supervisory capacity and stability considerations. Greater flexibility in setting both the deposit and lending rates would strengthen monetary transmission and help banks better price credit risks and raise capital through improved profitability. The 8 percent deposit floor for savings/term deposits is high by regional standards while net interest margins remain moderate despite the recent liberalization of uncollateralized lending at higher rates.

Deposit Interest Rate

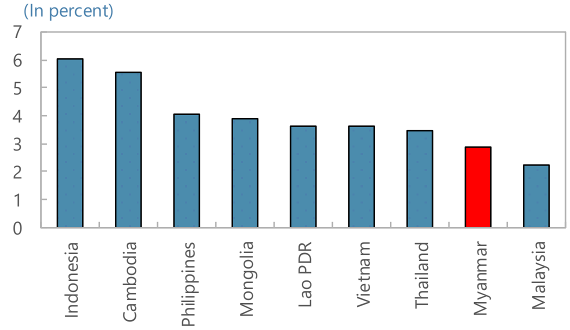
(In percent)



Source: IMF's *International Financial Statistics* database.

Bank Net Interest Margin, 2017

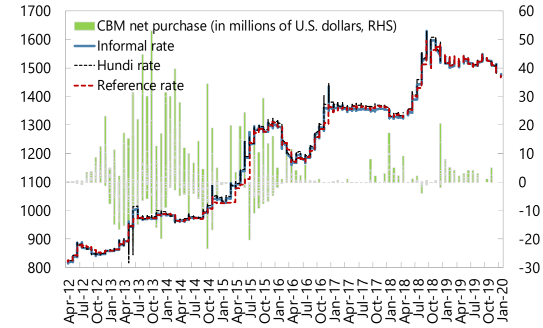
(In percent)



Sources: Bankscope and Orbis Bank Focus, Bureau van Dijk (BvD); and Global Financial Development Database.

- *Adhering to the new FX intervention rule and support FX market development*. The recently implemented asymmetric FX intervention strategy—buying FX during inflows (recent period) and selling only to avoid disorderly market conditions—appears to be working well while allowing the exchange rate to act as a shock absorber. The one-way FX auction with clear internal guidelines eliminates the multiple currency practice (MCP) resulting from the previous multi-price auction. The focus should now shift to supporting the development of formal FX markets by addressing regulatory gaps (amendments to the Foreign Exchange Management Law), encouraging the availability of hedging instruments, and improving the availability of timely market information.

Foreign Exchange Intervention
(Kyats/U.S. dollar)



Source: Central Bank of Myanmar.

Authorities' Views

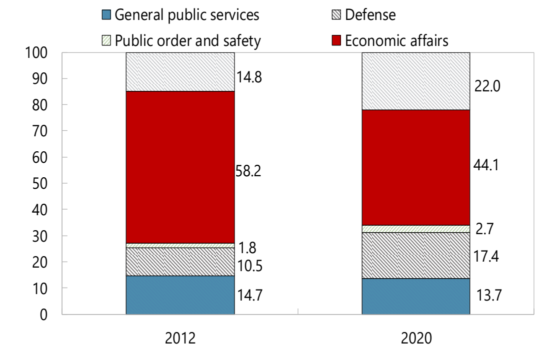
21. The CBM plans to further upgrade the monetary framework and the authorities reiterated their commitment to steadily phase out monetary financing. The CBM will continue to follow a market-determined reference exchange rate and will consider introducing an interest rate corridor including an IOER. While worried about rising inflation, they were open to gradual interest and deposit rate flexibility at the appropriate time. They noted that deposit and treasury auctions were working well and keeping market rates above expected inflation. While acknowledging the spike in monetary financing in September, authorities reiterated that after adjustments, it did not breach their gross nominal target of 20 percent of planned domestic financing. They agreed that given the planned spending pick up in FY2019/20 it would be important to closely monitor and forecast financing needs. They agreed that lower CBM financing of the fiscal deficit would help contain inflation and reiterated their commitment to steadily phase out monetary financing. However, they were not sure of the timing given the political cycle when the next 2020–21 budget would be submitted prior to the elections under uncertain external financing conditions.

CREATING FISCAL SPACE TO SUPPORT THE SUSTAINABLE DEVELOPMENT GOALS

A. Strengthening the Fiscal Framework

22. The improved budget execution supported growth in FY2018/19. The FY2018/19 fiscal deficit was in line with staff estimates and provided a modest stimulus as planned, albeit with greater net CBM financing than envisaged due to lower domestic debt issuances. Tax revenues were stagnant while non-tax revenue particularly from State Economics Enterprises (SEE) declined (Tables 2 and 3). However, capital expenditure was subdued reflecting capacity constraints in spending execution. To respond to weak cyclical conditions and address the rapidly increasing demand for electricity, the fiscal deficit for FY2019/20 should increase to about 4 percent of GDP, with increased revenue driven by higher electricity tariffs offset by higher infrastructure spending. The medium-term fiscal deficit should remain around 4-4½ percent of GDP to support growth while preserving debt sustainability. CBM financing should be phased out in FY2020/21 or FY2021/22 at the latest.

Spending Composition
(In percent of total)



Sources: Myanmar authorities; and IMF staff calculations.

23. Fiscal structural reforms are needed to create the fiscal space for SDG-related spending and possible bank-related costs. Fiscal policy should focus on achieving the SDGs, by prioritizing investments in energy, infrastructure and social spending. At the same time, the revenue-to-GDP ratio is on a declining trend, partly due to declining natural resource revenue and stagnant tax revenues. The authorities should adopt a medium-term revenue strategy with specific targets to meet speeding needs in a sustainable way. Treasury management should be enhanced to ensure sufficient financing of the fiscal deficit and development of the bond market. Fiscal space can come from:

- *Modernizing the tax system to raise revenues.* A new Income Tax Law (ITL) should be submitted to parliament, incorporating a new rate structure for personal income tax to protect the tax base, raise revenues and rationalize incentives by removing scope for discretion (Appendix IV). Reduced rates for undisclosed income proposed in the FY2019/20 budget should be one-off and phased-out by the new ITL. Procuring the Integrated Tax Administration System (ITAS) and enacting the Tax Administration Law (TAL) represent two important milestones of the Internal Revenue Department's (IRD) reform journey. Enough resources should be devoted to implementing the TAL and ITAS, which will help improve governance and fight corruption. The fiscal regimes for the petroleum and mining sectors should be modernized, incorporating Fund recommendations in the ITL. In the medium term, a comprehensive tax reform encompassing commercial and the special goods tax should be developed paying due regard to capacity.

- *Improving budget execution and efficiency for more responsive fiscal spending.* A credible budget anchored on realistic revenue forecast and targets linked to tax reforms measures and macro developments is a priority. Continued PFM reforms including a new chartered accounts and financial information reporting system (FIRST 2.0) as well as GFS reporting in future budget documents can strengthen spending monitoring. The sharp rise of CBM financing toward the end of FY2018/19 reflects gaps in cash management which must be addressed urgently through better coordination between the Treasury and CBM and more proactive planning of needed treasury securities issuance.

- *Implementing pension reforms.* The plan to move to a defined contribution pension system through a Central Provident Fund (CPF), supported by the World Bank, aims to provide financial security for public sector retirees while ensuring long term fiscal sustainability. This will also help develop the domestic capital market. However, the main parameters of the pension reforms, such as the contribution rate and benefits including replacement rates, need to be carefully calibrated based on further actuarial study and may entail significant transition costs.

B. Managing Fiscal Risks in SEEs and PPPs

24. The government has made progress in enhancing governance in SEEs. The recent cost-recovery adjustment to electricity tariffs is commendable and will reduce Electric Power Generation Enterprise losses (about 1 percent of GDP in FY2018/19). Careful assessment of PPAs currently under negotiation based on cost competitiveness including contingent liabilities and guarantees should be centralized. The recent decision to bring SEE oversight under the MOPFI is timely and should be followed up by a privatization/restructuring strategy. Ongoing Fund TA will provide concrete recommendations on fiscal relations between SEEs and the center. On petroleum production sharing contracts, the new bidding round should adopt a competitive bidding process and a "model contract" based on Fund TA on fiscal aspects and linked to the new Petroleum law.

25. A framework for managing public investment including public-private partnerships (PPPs) should be established to monitor and control the associated fiscal risks. The "Project Bank" could be developed into a tool that can consolidate the key information of investment projects and facilitate appraisal and prioritization including in the power sector. Value for money analysis can help decide which projects should be on-budget, ODA financed or set up as PPPs. Current off-balance sheet liabilities related to existing power purchase agreements (PPAs) and PPPs (estimated at 3 percent of GDP) and the planned scaling up of infrastructure project could entail significant fiscal risks. A large share of the envisaged projects in the "project bank" are being proposed as PPPs, which may bring efficiency gains but can also entail contingent liabilities including from sovereign guarantees. Thus, it becomes crucial to identify and report contingent liabilities in a fiscal risk report which should be presented to the parliament on a regular basis. Further Fund TA can support the estimation and reporting of contingent liabilities in collaboration with the World Bank.

Myanmar: Off Balance Sheet Debt Related to PPPs and PPAs

	In Millions of U.S. Dollar	In percent of 2018 GDP
Electricity	1,874.7	2.8

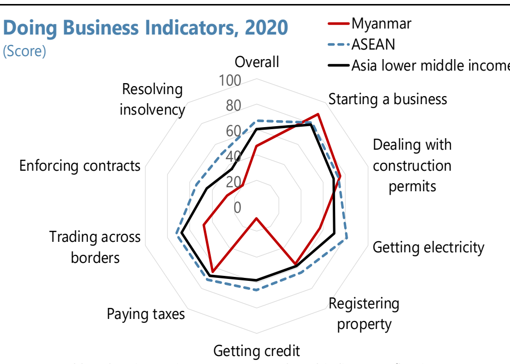
Authorities' Views

26. The authorities agreed on the fiscal stance and are committed to fiscal reforms. The government's FY2019/20 budget contains a positive fiscal stimulus with strengthened capital spending particularly in the energy sector. They reiterated the commitment to phasing out CBM financing of the budget, and explained the overshooting of the target in end FY2018/19 as temporary. The authorities are discussing the recommendations from the recent Fund mission on income tax policy, including scenarios on the personal income tax structure. The IRD is expanding the coverage of the self-assessment system (SAS) and centralizing tax return and payment processing for the large and medium taxpayer offices. Although the "Project Bank" has just been launched, they intended to make it instrumental in managing public investment including PPPs. The authorities highlighted that investments under the CMEC would be assessed according to international standards. They also noted the benefits from ongoing reforms to the state owned banks. They welcomed forthcoming Fund TA to support them in strengthening SEE governance and the management of fiscal risks.

ENHANCING STRUCTURAL REFORMS AND GOVERNANCE FOR INCLUSIVE AND SUSTAINABLE GROWTH

27. Sustaining the reform momentum is important to achieving higher and more inclusive growth. Building on recent progress to open foreign investment to new sectors such as insurance, further efforts to enhance the business environment, notably via more reliable power supply, contract enforcement, improved access to finance and logistics are required. A new energy masterplan with a clear project pipeline included in the "Project Bank" would help secure energy security at least cost. Measures to improve corporate governance, including via the new insolvency law, would ensure healthy investment in the economy. The authorities should move ahead briskly with the planned adoption of important financial infrastructure—including a credit bureau, a secured transactions framework and regulatory oversight of payments—to enable broader access to finance and support the rapidly expanding digital payment solutions in the country. On logistics, the East-West corridor and CMEC holds promise to better integrate markets, and should be developed through competitive bidding processes and transparent reporting of fiscal risks.

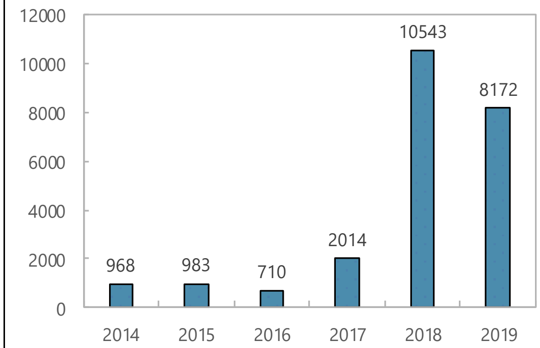
Doing Business Indicators, 2020
(Score)



Source: World Bank Doing Business, 2020: Survey-based indicators reflect investors' perceptions on the business environment. These indicators should be interpreted with caution due to a limited number of respondents, a limited geographical coverage, and standardized assumptions on business constraints and information availability.

28. Despite some progress, governance and corruption vulnerabilities remain. Recent achievements in strengthening the fiscal framework include establishing the medium taxpayer's office, and the passage of the TAL. In addition, number of complaints made to the anti-corruption commission (ACC) have increased. The second cycle of review of United Nations Convention against Corruption (UNCAC) implementation is complete, with findings expected shortly. On IMF advice, the new bidding round for exploration has been delayed to ensure it is consistent with the draft ITL. The National Risk Assessment (2017) shaped the National Strategy which was formally adopted in 2019. Progress of addressing deficiencies highlighted by the 2018 Mutual Evaluation Report by the Asia Pacific Group (APG) have been held back by weak capacity and limited reforms, raising the risks that Myanmar will be placed on the "greylist" during the Financial Action Task Force (FATF) plenary in February 2020. Addressing gaps in the AML/CFT framework recommended by the APG is critical and the high-level coordination initiated in this regard is a welcome step, and should be followed up by further efforts to amend the AML law in line with Fund TA. Fiscal transparency, including EITI reporting, and strengthening anti-corruption efforts should help mobilize tax and natural resource revenues while reducing the costs of doing business (Appendix V).

Number of Complaints to ACC



Source: Myanmar Anti-Corruption Commission website.

29. The IMF stands ready to provide capacity development (CD) assistance on structural and policy reforms (Appendix VI). CD from several development partners, including the IMF, currently focuses on building fiscal and monetary institutions, strengthening the financial sector and legal framework and improving macroeconomic statistics. Whereas substantial progress is being made in these areas, more needs to be done in national accounts and treasury operations. Some reprioritization, given absorptive constraints and rapidly evolving needs, may be required.

STAFF APPRAISAL

30. Economic activity in FY2018/19 remained below historical levels. Growth is estimated at 6.5 percent in FY2018/19, up slightly from 6.4 percent in 2017/18 on account of modest fiscal stimulus and one-off increase in gas exports. Domestic demand remains weak reflecting a correction in real estate prices, slowing credit and declining investments. FDI inflows are subdued amid tepid foreign investor sentiment.

31. Although long-term growth prospects in Myanmar remain favorable, the outlook is subdued heading into the November 2020 elections. For FY2019/20 growth is expected to moderate slightly to 6.4 percent as the real estate price correction and uncertainty weighs on investor sentiment in the runup to elections. This is despite the fiscal stimulus envisaged in the FY2019/20 budget. Starting FY2020/21, bank deleveraging is expected to slow credit and GDP growth, as banks start writing off irrecoverable NPLs fully and recapitalize after the expiry of the forbearance that the authorities extended to August 2020. Medium-term growth is now projected to be lower than previously envisaged.

32. Systemic risks stemming from fragilities in the banking system remain elevated. Banks have continued to make progress switching from overdraft into term loans, but the re-underwriting has led to a rise in NPLs, which coupled with weaker real estate valuations, have stressed bank capital. Although some banks have raised capital including through foreign equity injections, this remains insufficient and the CBM has extended the period for banks' compliance with capital adequacy and large exposure limit requirements to August 2020. During this extension, the CBM should encourage banks to restructure viable loans, recapitalize and prepare a comprehensive financial sector restructuring strategy including contingency planning.

33. Monetary conditions should be proactively managed to anchor stability. The recent spike in inflation is mainly due to supply side factors, notably the doubling of electricity tariffs. Thus, the monetary stance should remain broadly unchanged by keeping market rates at positive real levels and broad money growth on its declining trend. The external position is broadly in line with fundamentals and the kyat and REER have been stable since February 2019. While the decline in the current account deficit resulting from import contraction has allowed modest reserve accumulation, reserve coverage at around 3½ months of imports remains inadequate. The transition to a one-way FX auction and implementation of clear internal guidelines which eliminate the MCP is to be commended and should also help accumulate reserves. The authorities have expressed interest in accepting Article VIII obligations, and staff is working with the authorities on this matter. With the successful transition to the market-determined reference exchange rate mechanism and a FX intervention rule, the time is right to upgrade the monetary policy framework and gradually liberalize retail bank interest rates.

34. Fiscal policy will continue to provide a modest stimulus in the near-term, though revenue mobilization will be critical to scale up SDG-related spending in a sustainable way. The mildly expansionary fiscal stance, with the fiscal deficit estimated at about 4 percent of GDP in FY2019/20, compared to 3½ percent in FY2018/19 is appropriate given the cyclical weakness. The rapid pickup in the deficit toward the end of FY2018/19 sharply raised central bank financing, partly reflecting the change in the fiscal year that obscured seasonal patterns but also gaps in cash management. Improved budget execution and proactive debt issuances should avoid a repetition in FY2019/20 and CBM financing should be phased out in FY2020/21 as originally envisaged. The declining trend in revenue-to-GDP ratio needs be reversed and a medium-term revenue strategy with specific targets is needed to meet SDG related spending needs in a sustainable way. This would involve modernizing the tax system to raise revenues while improving PFM systems for more efficient and responsive fiscal spending.

35. Implementation of the medium-term economic roadmap, the MSDP, will play a critical role to help achieve the SDGs. To be able to harness the potential from the demographic dividend and strategic location, Myanmar will need to invest heavily in physical and human capital while managing fiscal risks. A new impetus to move forward on the scaling up of infrastructure spending and structural (e.g., tax) reforms is forming given the weak economy and energy shortages. The focus is on PPPs and selected bilateral projects, including under the East-West and the China-Myanmar economic corridor, but the fiscal risks need to be assessed and properly managed.

36. Despite some progress, governance and corruption vulnerabilities are severe and systemic in Myanmar. Measures to address capacity and resource constraints are critical to address the AML/CFT deficiencies identified by the APG. The new bidding round for petroleum exploration should be competitive and consistent with the ITL to improve fiscal governance and natural resource management. Financial sector regulatory and corporate insolvency framework are paramount to address elevated banking sector risks. More resources should be dedicated to strengthening the anti-corruption framework including further integration to the MSDP.

37. CD remains crucial to support the ambitious structural and policy reforms. Whereas substantial progress has been made, more needs to be done in national accounts statistics, treasury operations and AML/CFT framework. Some reprioritization, given absorptive constraints and rapidly evolving needs in the fiscal and financial sector may be required.

38. It is proposed that the next Article IV consultation be held on the standard 12-month cycle.

1/ From 2018/19 onwards the fiscal year was changed to an October 1 to September 30 format. This table uses the new fiscal year definition for both historical data and projections.

2/ Real GDP series is rebased to 2010/11 prices by the authorities.

3/ Union and state/region governments and state economic enterprises. Revised to reflect Government Finance Statistics Manual 2014 classification.

4/ The balance of payments data has been revised according to the BPM6 methodology.

5/ FDI from 2017/18 onwards reflects improved forex transaction data collection, which has caused a break in the data series.

Annex I. Key Policy Recommendations from the 2018 Article IV Consultation

Policy advice	Implementation status
Monetary and exchange rate policies	
Objective: Contain inflation and maintain exchange rate flexibility and set groundwork for upgrading the monetary framework.	
Increase in government securities issuance and deposit auction volumes, pending further developments in inflation and liquidity; improve liquidity forecasting and further development of debt and interbank markets	In progress.
Strengthen monetary policy formulation by articulating a medium-term inflation objective and introducing an interest rate on excess reserve (IOER) to provide a floor for an interest rate corridor.	Under consideration
Steadily phase out CBM financing of the deficit and recalibrating the target as a share of previous year's reserve money rather than of domestic financing.	CBM financing of the deficit spiked at the end of 2018, to levels higher than in previous years, and was close to official target ceiling of 20 percent of domestic financing.
Develop a one-way FX intervention strategy and further develop FX market.	In progress. A one-way FX auction rule was adopted in November 2019, which in addition to the clear guidelines eliminates the MCP.
Fiscal policy	
Objective: Create fiscal space to help achieve Sustainable Development Goals (SDGs) while maintaining macroeconomic stability and debt sustainability.	
Provide a moderate fiscal stimulus to the economy, keeping the fiscal deficit around 4 percent of GDP over the medium term to maintain a low risk of debt distress.	Achieved for FY2018/19.
Continued domestic revenue mobilization, including through a comprehensive MTRS, modernizing and enacting tax laws (including a chapter on extractives), customs reforms, and strengthening administrative capacity.	The Tax Administration Law went into effect in September 2019. The income tax law is being revised and modernized. Other elements of IRD's second phase of the reform journey are in progress.
Expenditure rebalancing towards social sectors and priority infrastructure spending while enhancing spending efficiency to help achieve (SDGs).	In progress.
Improvements in Public Financial Management (PFM), prioritizing fiscal transparency and reporting, incorporating an IT system for the Treasury, a stronger	In progress.

relationship between planning and budget, and better managing, controlling and reporting fiscal risks.	
Restructuring and improving governance of SEEs; push ahead with electricity tariff reform.	SEE reform is advancing; the State Asset Management Corporation (a holding company for the best performing SEEs) is being established. A comprehensive electricity tariff reform enacted in July 2019.
Tap concessional external borrowing and increase market based domestic financing of the fiscal deficit.	In progress.
Financial sector	
Objective: Ensuring financial stability and deepening and strengthening financial sector regulation and supervision.	
Implement 2017 prudential regulations.	In progress. Banks appear to have met the July 2019 target of overdrafts comprising 30 percent of total lending. The CBM has extended the period for capital adequacy and large exposure limit compliance to August 2020.
Strengthen bank capitalization.	In progress.
Form contingency plans to address systemic banking risks and strengthen resolution framework.	In progress.
Accelerate reform of state-owned banks.	In progress.
Continue financial sector and interest rate liberalization at a pace commensurate with CBM's capacity.	In progress.

Source: IMF Country Report No. 19/100.

Annex II. Risk Assessment Matrix (RAM)[1]

	Shocks and Likelihood (Red= high likelihood; green = low likelihood)	Potential Impact (Red= high; green=low)	Policy Response
Domestic	Macro-financial spillovers in the event of banking sector distress and delayed recapitalization.	Fears of bank fragility could lead to bank runs/collateral fire sales; Likely credit crunch, if weak banks cut back on lending while adjusting to new regulations; Contingent fiscal liabilities related to recapitalization and/or possible liquidity support; Pressure for further exchange rate depreciation and FX reserve depletion.	Implement contingency plans and encourage timely recapitalization; Move down the resolution ladder for non systemic banks; Continue to strengthen financial regulations and supervision to ensure financial stability and deepening while improving credit risk management of banks; Strengthen macroeconomic policy frameworks to increase responsiveness to shocks. A flexible market-determined rate will help limit reserve losses and incentive to convert to FX, but an external financing backstop would also be important to anchor expectations and respond to disorderly market conditions. Under a deeper systemic crisis a tighter macro policy stance alongside a resort to partial deposit freezes or guarantees may be needed.
	Slow progress in resolving the Rakhine state humanitarian crisis.	FDI and external financing could be strained. The risk of broader economic sanctions including potential loss of trade preferences. Delays overall economic reforms.	If development partner financial assistance is disrupted, rationalize public expenditures while preserving humanitarian spending and social sector spending; Resist monetization of fiscal deficit; Allow the exchange rate to adjust to any external financing shortfalls and actively build up reserves where circumstances allow.
	Increased monetary financing of fiscal deficit ahead of the elections	Sharp and persistent increases in monetary financing could put pressures on inflation, lead to a loss of monetary control, and reduce credibility in the monetary regime.	Increase issuance of Treasury bills and bonds and tap external concessional borrowing where possible. Delay nonessential expenditure until financing is secured.
	Slippages in implementing needed reforms from limited institutional capacity.	The public sector is unable to cope with speed of reform, leading to slippages; Growth effects compounded by weaker business confidence. A listing of Myanmar by the Financial Action Task Force (FATF) could create financial stability risks.	Well-tailored TA programs that focus on staff training to raise institutional capacity; Coordinate TA programs with international donors and streamline and adjust the scope of the programs, if necessary; Further promote operational autonomy of the CBM.
External	Rising protectionism and retreat from multilateralism.	Weaker export growth, which could significantly reduce GDP growth and contribute to kyat depreciation.	Allow greater exchange rate flexibility to absorb external shocks; Continue with structural reforms to diversify exports and trading partners; Improve business environment to attract more FDI from other sources.
	Weaker-than-expected growth in China.	Reduced export growth and FDI inflow and infrastructure development, since China is an important trading partner and source of FDI.	Allow greater exchange rate flexibility to absorb external shocks; Continue with structural reforms to diversify exports and trading partners. Consider countercyclical macro-policies depending on financing conditions.
	Large swings in energy prices.	This would impact the import bill, 28 percent of which is fuel imports. Lumpy oil payments tend to put greater pressure on the foreign exchange market and thus raise inflation.	Allow greater exchange rate flexibility to absorb external shocks; Consider tightening monetary policy to mitigate second round impacts.
	Higher frequency and severity of natural disasters	It is estimated that natural disasters in Myanmar have generated a direct economic loss of 1.82 percent of GDP every year (2006–15) on average. In addition human costs, natural disasters effect debt sustainability through damaging long-term growth and increasing borrowing for reconstruction needs from damage to infrastructure and capital.[2]	Identify and explicitly integrate risks into fiscal frameworks and budget planning; Build policy and financial buffers to enhance resilience to shocks; Enhance preparedness and invest in infrastructure that can better cope with natural hazards.

Source: IMF staff.

[1] The Risk Assessment Matrix (RAM) shows events that could materially alter the baseline path (the scenario most likely to materialize in the view of IMF staff). The relative likelihood is the staff's subjective assessment of the risks surrounding the baseline ("low" is meant to indicate a probability below 10 percent, "medium" a probability between 10 and 30 percent, and "high" a probability between 30 and 50 percent). The RAM reflects staff views on the source of risks and overall level of concern as of the time of discussions with the authorities. Non-mutually exclusive risks may interact and materialize jointly. "Short term" and "medium term" are meant to indicate that the risk could materialize within 1 year and 3 years, respectively.

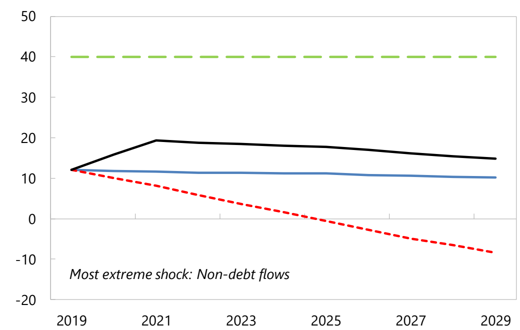
[2] Myanmar Selected Issues 2018; Country Report No. 18/91.

Annex III. External Sector Assessment

Overall, the external position in FY2018/19 is broadly in line with fundamentals and desirable policies. One-off factors in FY2018/19, such as the completion of gas pipeline repairs and changes in regulation in the auto industry imports, and cyclical weakness in the economy narrowed the current account deficit. The deficit is expected to widen but remain sustainable with manageable external debt. However, reserve coverage continues to be inadequate. Elevated systemic risks in the banking system could result in macro-financial spillovers and foreign exchange market pressures. Debt management capacity needs strengthening, given discussions around infrastructure scaling up and the authorities should remain vigilant about borrowing that leads to a rapid debt buildup.

1. **External debt sustainability.** Myanmar's risks of external debt and overall debt distress continue to be assessed as low (2019, DSA). While the overall debt outlook remains positive—several vulnerabilities exist. These include a slowdown in FDI, exports, the aftermath of a natural disaster or from larger than expected contingent liabilities arising from the banking system or from a ramp up in PPPs. Increasing and diversifying the export base, maximizing concessional loans and improving policy buffers would help keep the debt burden contained. Progress on the Rakhine state crisis has been slow and is affecting the outlook for external inflows.

PV of PPG External Debt-to-GDP Ratio



Source: IMF staff estimates.

2. **Current account.** Using the EBA-lite CA model, staff estimate the CA norm to be a deficit of 4.8 percent of GDP resulting in a CA gap of 2.0 percent of GDP and a policy gap of 1.2 percent of GDP. However, subdued economic activity coupled with one off factors narrowed the current account deficit in FY2018/19, overstating the gap.[1] The CA gap is significantly reduced (to -0.6 percent of GDP) when the cyclical weakness is fully taken into account and adjustments are made for the

Results: EBA-Lite CA Assessment

(In percent of GDP, FY 2019)

CA-Actual	-2.0%
Cyclical Contributions (from model)	0.2%
Cyclically adjusted CA	-2.2%
CA-Norm	-4.6%
Cyclically adjusted CA Norm	-4.8%
Multilaterally Consistent Cyclically adjusted CA Norm	-4.1%
CA-Gap	2.0%
of/which Policy gap	1.2%
Elasticity	-18.0%
REER Gap	-10.9%
CA-Fitted	-2.8%
Residual	0.8%
Natural Disasters and Conflicts	0.6%

Source: IMF staff estimates.

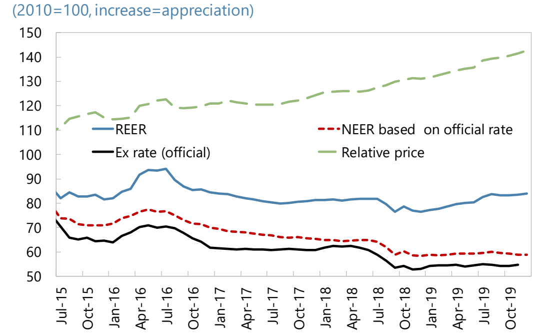
[1] The cyclical weakness in the economy is driven by weak investment which has greater import intensity. Imports contracted sharply on lower FDI related capital goods imports (down 1.1 percent of GDP relative to FY2017/18) and iron and steel imports (down 0.3 percent of GDP relative to 2017/18) due to a slowdown in construction.

one-off factors.[2] Moreover, given the current level of reserves, it is unlikely that the external position is stronger than fundamentals. Staff therefore judge the external sector to be in line with fundamentals and desired policies.[3] Staff has also estimated the REER gap using the REER model, which suggests a larger REER gap. A lower weight is attached to this approach as it has not performed as well for Myanmar.[4] Over the short to medium term, the CA deficit is expected to widen reflecting a slowdown in gas exports and a relatively stronger demand for imports including oil.

3. **Real exchange rate.** The kyat and REER have remained broadly stable since February 2019, when CBM formally adopted a market-determined reference exchange rate, which appears to have better anchored market expectations and reduced the informal market spread. FX auctions have been stepped up to provide dollar liquidity but with limited scope given the level of reserves.

Nominal and Effective Exchange Rates

(2010=100, increase=appreciation)



Sources: Myanmar authorities; and IMF staff estimates.

4. **Reserve coverage**. The narrower CA deficit offset weaker FDI and other inflows has allowed a modest buildup of FX reserves via auctions to about US$5.7 billion (3.5 months of imports) at end-September 2019. Staff estimate reserve optimal coverage for Myanmar to be around five to six months of import coverage.[5] Reserves have been relatively stable around three months of prospective imports given limited FX intervention. Staff continue to assess reserve coverage as below adequate, especially given the risks from the banking sector which if crystalizes, is likely to result in the conversion of deposits into foreign exchange, putting further pressure on reserves.

[2] One-off factors affected the CA deficit in FY2018/19. Gas exports were artificially boosted by the completion of the repairs of a major gas pipeline. In addition, new regulations on auto (a ban on all righthand side vehicles) reduced imports automobiles (down 0.3 percent of GDP relative to 2017/18), particularly used vehicles from Japan.

[3] The desirable policy (P*) for public health expenditure was adjusted to 5 percent of GDP based on preliminary estimates to achieve SDGs mainly driven by an increase in doctors and other health staff which are currently comparatively low. P* (15 percent of GDP) for private sector credit growth has been set slightly above but in line with nominal GDP growth.

[4] From the EBA-Lite REER model, the REER gap is 11.1 percent above what is warranted by fundamentals and desirable policies. However, the REER model does not account for Myanmar's transition to a market-based economy and the need to address decades of underinvestment.

Annex IV. Upgrading the Monetary Policy Framework

With important reforms to the FX market achieved, the focus should now shift to upgrading the monetary policy framework, which would better support price and external stability. Drawing on recent IMF TA, this note outlines key priorities in this regard and in light of the current macroeconomic juncture, primarily: strengthening monetary policy formulation, establishing and operationalizing a firm interest rate corridor, and continuing to gradually liberalize interest rates.

A. Strengthening the Overarching Monetary Policy Framework and Formulation

1. The overall objective of monetary policy and its formulation should be clarified and made explicit. This would provide the overarching basis to frame and inform CBM's open market operations. Further, the actual conduct of monetary targeting framework itself needs to be strengthened.

- **Formulating monetary policy.** An overall inflation objective should be clearly articulated to establish a monetary anchor. A Monetary Policy Committee drawing input from various departments and agencies, should now be formed to meet regularly and formally in a predefined process to monitor and review monetary aggregates versus the published targets relative to economic performance, and to adjust the monetary policy stance accordingly.

- **Review the monetary targeting framework.** The relationship between monetary aggregates, targets and inflation outturns, and the analytical tools to forecast these, should be carefully reviewed. Challenges in liquidity management make setting and adhering to reserve money targets difficult, necessitating investments in liquidity monitoring and forecasting capacity at both the CBM as well as banks (particularly state-owned banks). In light of this, a gradual move towards stabilizing excess reserves and interest rate targeting could be considered.

B. Establishing an Interest Rate Corridor

2. An interest rate corridor would help CBM guide short-term interest rates between a ceiling and floor, help mitigate excessive volatility, manage excess reserves, and allow better monetary control. To start, a relatively wider corridor would encourage banks to adjust and gradually increase participation in the interbank market while limiting the need for excessive CBM intervention. The level and width of the corridor should be reviewed periodically (e.g. starting quarterly) and adjusted as needed in line with macrofinancial developments. Ideally, the following elements of the interest rate corridor should be presented together to provide market participants full understanding of the framework:

- **Introduce interest on excess reserves (IOER) to establish the corridor floor.**
  - **Level.** There is a trade-off to balancing interest rate volatility and with remuneration costs. Given banks expected excess reserves levels, however, such costs are likely small. An IOER of 4 or 5 percent to begin with would limit remuneration costs for the CBM as well as allow market participants time to adjust to the corridor. A floor below the rate on government securities would support the T-bills/bonds market development and continued lending.
  - **Eligibility.** The IOER should apply to domestic and foreign private banks. For now, state-owned banks, in particular MEB, should be excluded from the IOER rate, given the size of their reserve positions, and ongoing restructuring. Attention should be placed on resolving the structural liquidity surplus of SOBs, including a single treasury account.

- **Upgrade existing discount window facility to form corridor ceiling.**
  - The discount window facility is distinct from the standard overnight overdraft (credit auction) facilities. Thus, its duration (overnight) should be standardized and haircuts adjusted to differentiate it from these standard facilities.
  - The existing 1995 Directive on this facility should be amended to clarify the discount window's legal basis (monetary operations tool), eligibility criteria, and collateral requirements as separate from regular overnight facilities and the LOLR facility as is currently implied by the 2013 Central Bank Law.
  - A special discount window facility for foreign banks should be introduced, which allows the use of USD as permissible collateral. This would address longstanding issues foreign banks' funding requirements.

C. Bolstering the Monetary Operations Toolkit

3. With the corridor established, the OMO toolkit should in turn be enhanced to enable CBM to guide the short-term interest rate effectively through the corridor. This toolkit would comprise:

- **Deposit and credit auctions.** As the main tool of the CBM, this can be enhanced by changing the frequency of auctions (weekly vs. bi-weekly, for a 1-week duration, plus 4-week where necessary), clarifying the amount for each duration offered, and simplify the procedures for participants as in government auctions. Credit auctions should be deployed to avoid liquidity squeezes. These should be kept separate from the discount window, which functions as a backstop with a penal rate.

- **T-bills/bonds.** Another priority is to improve cash and liquidity forecasting by the Treasury in deciding the amount of securities to offer, including improving coordination between the Treasury and CBM (sub-committees) to avoid underfunding and resort to monetary financing.

- **Repo market.** Although a limited number of bilateral repo transactions haven taken place, the CBM can play a larger role in encouraging the repo market, including a GMRA based CBM instrument.

- Refinements to the **reserve requirement framework**, including reducing the large lag between the calculation and maintenance periods, would increase overall effectiveness.

- Finalizing the **interbank reporting Directive** would enhance timely monitoring and the development of a yield curve, thereby supporting interbank activity.

D. Interest Rate Liberalization

4. With greater exchange rate stability, it is also now appropriate to consider further liberalizing the administrated controls on interest rates to better reflect risk. Allowing interest rates to respond to market conditions would also reinforce the CBM's adoption of the interest rate corridor and support the monetary transmission mechanism. More generally, decisions to adjust the interest rate corridor and retail rates should be made periodically in line with economic conditions.

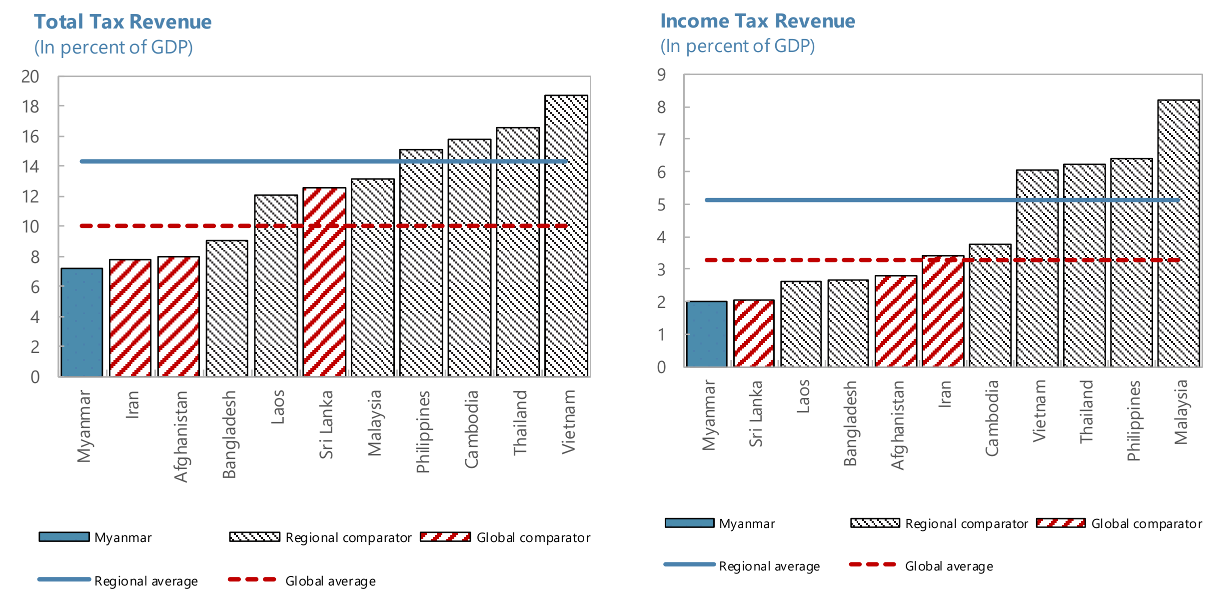
- **Deposit rate.** Myanmar's deposit rate is among the highest in the region. A decrease in the deposit rate floor would help stimulate economy and support bank profitability.

- **Lending rate.** Given weak cyclical conditions, a decline in the lending rate would be helpful. This could be done by lowering the collateralized lending rate cap at the same time as a deposit rate reduction.

Annex V. Reforming the Income Tax System

1. Modernizing the tax system in Myanmar is critical for securing revenues for achieving development goals as well as improving efficiency and equity. The current personal income tax (PIT) structure in practice excludes 98 percent of taxpayers, resulting in a very narrow base and a very low PIT potential. The PIT potential revenue is estimated to be only 0.3 percent of GDP even in the absence of any tax avoidance or evasion. On the corporate income tax (CIT) front, the overly generous and distortionary tax incentives are estimated to entail a direct cost exceeding 25 percent of total CIT revenue. To address the deficiencies of the current system, reforms need to be introduced to complete the Income Tax Law (ITL) draft. The draft ITL—assisted by the IMF—is at an advanced stage, but key policy decisions remain to be made.

Myanmar: Tax Revenue Compared to Peers



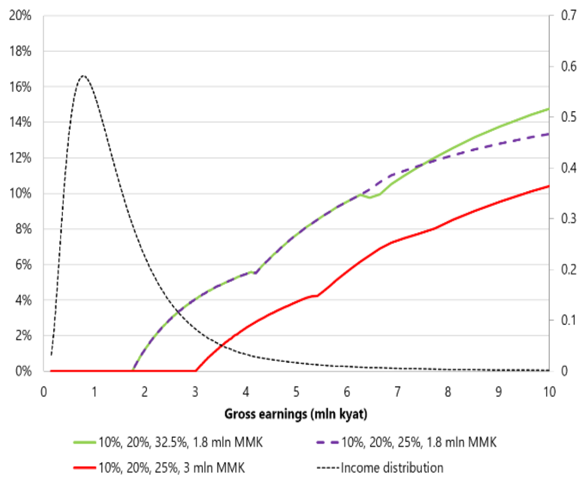
Source: Myanmar: Reforming the Income Tax System, IMF Technical Report, November 2019.

2. The IMF tax policy TA mission in September 2019 recommended reform options which should help to raise revenues by 2-4 percent of GDP and improve distribution over the medium term. The baseline package includes the following main elements:

a) Lower exemptions/deductions in the PIT from 6.8 million kyat to 1.75 million kyat (or at least to 3 million kyat) and revise the rate structure (see table below). The proposed tax structure would raise revenue from the 1/3 richest taxpayers and generate 3.8 percent of GDP. It only implies a small change for the majority of population as 93 percent of the population would lose less than 5 percent of gross income as a result.

Estimated Income Distribution and the Effects of PIT Reforms

(left scale: average tax rate; right scale: income distribution density)



Proposed PIT Scale

(dashed line in left figure)

General tax exemption plus value of deductions			1.75 mln
Bracket	**Start bracket**	**End bracket**	**Marginal tax rate**
1	1.7 mln (P67th percentile)	2.3 mln	10%
2	2.3 mln (P80th percentile)	4.3 mln	20%
3	>4.3 mln (P95th percentile)		25%
			Estimates
Revenue (% GDP)			3.8%
Revenue (MMK, billion)			3440
Fraction population paying PIT (full enforcement)			32%
Fraction population losing less than 5% of gross income			93%

Source: Myanmar: Reforming the Income Tax System, IMF Technical Report, November 2019.

b) Tax all capital gains at the corporate level at the statutory CIT rate of 25 percent, except for gains from selling majority-owned companies, including taxing capital gains in the petroleum sector using the statutory CIT rate.
c) Tax rental income at the corporate level at the statutory CIT rate.
d) Impose a domestic withholding tax (WHT) on interest of 10%.
e) Introduce a cross-border WHT on dividends and management and technical fees

3. Tax incentives should be rationalized. The draft ITL supersedes other legislations providing income tax incentives and allows for accelerated depreciation or investment allowances. The tax holidays and reinvestment tax credit in Myanmar Investment Law should be ideally repealed and replaced by cost-based incentives in the ITL such as tax investment credits or at the very least should be rationalized and made by rule-based with clear eligibility criteria in the ITL. This would entail detailed discussions with Myanmar Investment Commission and relevant ministries on how current incentive system should be rationalized by narrowing the scope (sectors, regions etc.) and generosity (e.g., time-bound with no renewals) through rules-based strict criteria and agreed by

Cabinet before the submission of ITL to Parliament. In addition, income tax incentives should be fully governed by the MoPFI, which should be provided information on tax expenditures as a requirement.

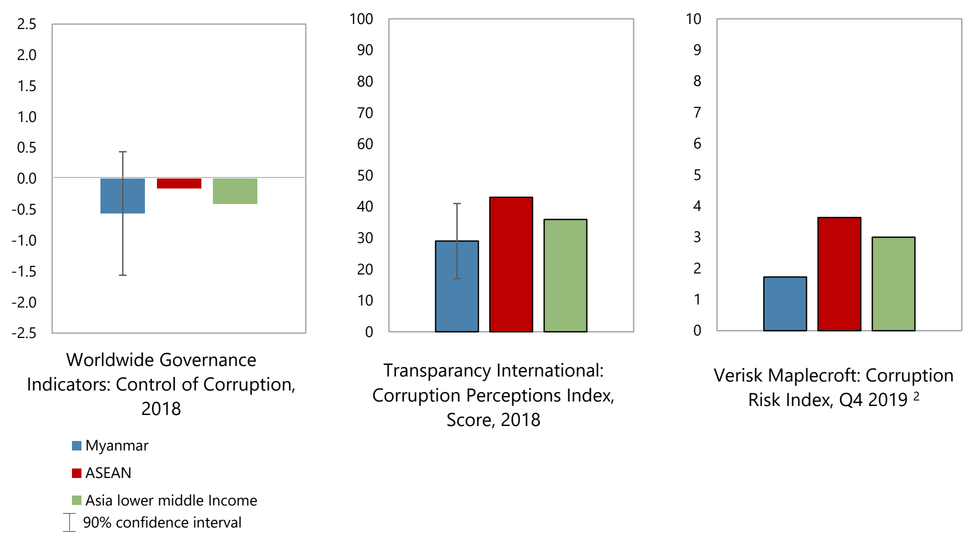
4. Other aspects of the income tax system should be revamped. These include introducing a simplified presumptive tax regime with a uniform turnover tax at a rate of 3 percent for businesses with a turnover below MMK 150,000 million, adopting transfer pricing legislation based on OECD guidelines and introducing additional rules regarding international taxation, addressing the distortions in the CIT by applying the standard CIT rate on listed firms and transparently defining allowable business expenditures, including amortization allowances of intangible assets. Given asset quality problems and very low provisioning levels in the banking sector, the authorities should permit mandatory bank provisions (as defined by the supervisory authority) to be tax deductible. Such a step, however, should be introduced in line with prudent fiscal considerations.

Annex VI. Strengthening Governance and the Anti-Corruption Framework

1. **Despite some progress, governance and corruption vulnerabilities are severe and systemic in Myanmar.** Numerous perception-based indicators point to corruption and governance related vulnerabilities (Figure 1). The authorities continue to work with the aim of reaching compliance with the United Nations Convention against Corruption (UNCAC), enhancing fiscal transparency, clamping down on money laundering and the financing of terrorism and smuggling, and strengthening financial sector regulations and governance. In May 2019, Myanmar underwent the second cycle of review of the implementation of the UNCAC, the findings from which are expected shortly.[1] Myanmar has been undergoing its second peer review assessment by the Asia Pacific Group on Money Laundering and is at risk at being 'greylisted' in February 2020 as part of this assessment.

Figure 1. Myanmar: Governance[1]

(Lower score indicates weaker governance)



Sources: Worldwide Governance Indicators, D. Kaufmann (Natural Resource Governance Institute and Brookings Institution) and A. Kraay (World Bank), 2018; Verisk Maplecroft's Corruption Risk Index, 2019; Transparency International's Corruption Perceptions Index, 2018.

[1] Use of these indicators should be considered carefully, as they are derived from perceptions-based data. Ranges are for a 90 percent confidence interval. Confidence intervals for peer group averages are negligible.

[2] Confidence intervals are not available for this indicator.

2. **The current revenue strategy will address fiscal governance vulnerabilities in a holistic way.** Recent progress by the Internal Revenue Department's (IRD) includes the establishment of the fifth medium taxpayer's office (March 2019) and the passing of the Tax Administrative Law (June 2019). Similarly, notable steps have been made in computerization, and with support from the

[1] Second review cycle on UNCAC implementations for Myanmar https://www.unodc.org/southeastasiaandpacific/en/myanmar/2019/05/country-visit/story.html.

IMF, developing the Export/Import Manual, providing new training and enhancing human resource policies in the Myanmar Customs Department (MCD). While progress has been made in both institutions, more proactive engagement and increased cooperation are needed for the reforms to expand further. Automation enhancements, planned in both the IRD and MCD, will help minimize the need for face-to-face contacts, provide greater transparency with taxpayers and importers, and standardize procedures nationwide. The revenue strategy will help focus attention on the need for improved governance and integrity on the part of revenue staff, taxpayers and importers. Greater clarity of extractives' revenues and tax expenditures will also be key features of revenue strategy discussions. Updated legislation, for both tax and customs, will give greater transparency and certainty of taxable transactions, in turn minimizing opportunities for discretion and negotiation. All these efforts are expected to improve governance and integrity of processes in both IRD and MCD.

3. Prudent management of extractive industries (EI) is a key priority. Myanmar has been a member of the (Extractive Industries Transparency Initiative) EITI since 2014. At its 2019 Annual Meeting, the EITI Board concluded that Myanmar has made meaningful progress in EITI implementation.[2] The Board commended Myanmar for its impactful EITI implementation, evident in the progress in introducing policy reforms, improving transparency in extractives data, stimulating robust public debate and creating a platform for dialogue among stakeholders. The Myanmar EITI Annual Progress Report for 2018 and 2019 have been published (with the 5th Report due in March 2020). These reports now cover the oil and gas sector, mineral, gems and jade, and pearl sector.[3] More recently, a new regulation on Beneficial Ownership was promulgated by the President's office. Looking ahead, Myanmar needs to further improve public disclosures, particularly related to license allocation, gemstone production data and data related to state-owned enterprises, while strengthening the comprehensiveness of its EITI reporting. The new bidding round for exploration has been pushed to allow the government to ascertain that its fiscal regime is sufficiently attractive and that legislative uncertainty is addressed. The IMF is providing TA on the petroleum and mining fiscal regime with an expectation that elements of best practice will be embodied in the tax legislation. More specifically, technical assistance is helping the authorities finalize the new Income Tax Law covering EI, put in place a new model production sharing contract, and reforms in mining sector taxation. Contract transparency will be critical in conducting a successful, credible and competitive bid round to increase the participation from international oil companies.

4. Fiscal data releases are now broadly in line with GFSM format and compiled on a consolidated basis. However, work continues towards improving financing data and some transactions of state economic enterprises (SEEs). The 2012 PEFA had highlighted several weaknesses in public procurement. Preliminary findings from the most PEFA, based on the more stringent new 2016 framework, indicate substantial improvements including in budget reliability,

[2] https://eiti.org/news/myanmar-moving-towards-greater-transparency, October 2019

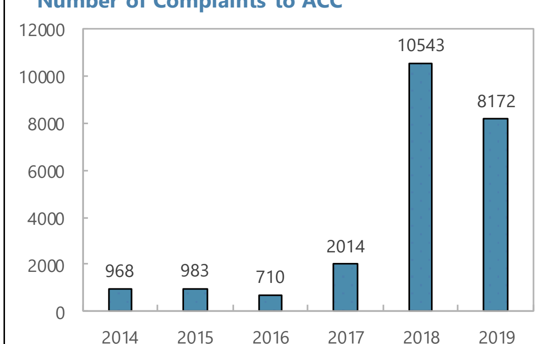
[3] See https://myanmareiti.org/en/publication/meiti-annual-progress-report-2018-2019

reporting, transparency and predictability.[4] The draft Procurement Law was submitted to parliament in November 2019 and was published to solicit comments from civil society. This law is expected to be passed in 2020. Implementing regulations are being drafted with the assistance of the World Bank. The greater focus on Public and Private Partnerships (PPPs) for infrastructure investments also calls for an appropriate PPP framework and reporting of contingent liabilities. Upcoming assistance is being considered for improving the corporate governance practices of SEEs, particularly those operating in the natural resource sector, and setting up an appropriate PPP framework. Timely publication of GFS, automation, more granular fiscal reporting, revenue disclosures, and tracking contingent liabilities remain crucial.

5. **In March 2019, the central bank issued all pending regulations on contentious corporate governance aspects highlighted in the 2018 Article IV consultation.** However, the supervisory authorities require further capacity building to operationalize these. Strengthening risk-based supervision, supported by IMF TA, continues at the central bank. TA is also helping the central bank in aligning accounting and audit practices with international standards while reinforcing staff capacity through training and hands-on guidance. The IMF is working with the central bank to fully transition to IFRS by 2021 as well as adopt risk-based audit procedures. Improving the corporate governance of banks by enforcing the regulations on the central bank's Directives ("Fit & Proper," "Directors," "External Auditors," "Related Parties," and "Substantial Interest" issued in March 2019) remains a priority. Generally, banks are implementing these regulations although progress has been hampered by capacity constraints and financial vulnerabilities. Progress on ensuring that banks publish financial statements in a timely manner has been slow. Corporate restructuring is expected to improve with passage of the new Insolvency Law., however, its implementation is expected to be gradual. More work also needs to be done on the framework for bank restructuring and resolution.

6. **The Anti-Corruption Commission (ACC) has become more active over the past year.** The number of complaints to the ACC has been increasing since the passing of the anti-corruption law. The new anti-corruption rules are currently with the parliament and accommodates whistleblower protections. The ACC continues to investigate high-profile cases including senior officials. Together with the Directorate of Investment and Companies Administration the ACC is focusing on the role of businesses in preventing corruption requiring companies to set up mechanisms to report corruption. To facilitate reporting, several corruption prevention units have been established in ministries. In 2019, Myanmar underwent a second cycle of the UNCAC review conducted by peer reviewers. The ACC recognizes

Number of Complaints to ACC



Source: Myanmar Anti-Corruption Commission website.

[4] More recently, the Auditor General Office and MOPF have agreed to move to International Public Sector Accounting Standards (IPSAS). Four State-owned Banks and SEEs plans to start to implement International Financial Reporting Standards (IFRS) by FY 2023/24, however, this could take 10−15 years to finish.

that more education to recognize and fight corruption is needed at the grassroot level and that the number of corruption prevention units need to be increased. The ACC notes that the soon to be released EITI report will strengthen anti-corruption efforts related vulnerabilities.

7. Myanmar needs to improve the effectiveness of its AML/CFT Framework. The 2018 Mutual Evaluation Report by the Asia Pacific Group found numerous deficiencies, both in terms of technical compliance and effectiveness. Lack of capacity and limited resources have held back reforms and Myanmar is at risk for being included on the "greylist" during the Financial Action Task Force (FATF) plenary in February 2020. Myanmar will therefore receive an Action Plan from the FATF that is designed to address the most significant shortcomings in the effectiveness and technical compliance of its AML/CFT regime. Encouragingly, a National Risk Assessment has already been conducted and recently the AML/CFT efforts have been placed under the vice president's office in order to ensure proper coordination. Nevertheless, compliance with the Action Plan will require a step up in efforts with strong political will, high level coordination, enough resources and TA. Enacting amendments to AML/CFT laws and rules in accordance with staff's recommendations, will address most of the outstanding technical compliance deficiencies. Bringing these laws and rules into effect, should be a priority.

Annex VII. Reprioritizing Myanmar's Capacity Development

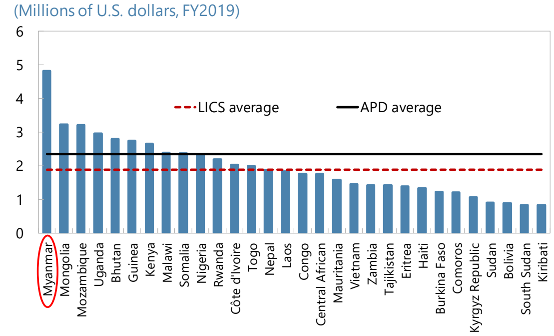
Capacity development (CD) remains crucial for Myanmar to help with the economic transition to a market-based open economy and build institutions. CD from several development partners, including the IMF, currently focuses on building fiscal and monetary institutions, strengthening the legal framework and improving macroeconomic statistics. Most of the CD in FY2018/19 was directed towards the fiscal and financial sectors through thematic medium-term projects. The updated CD strategy, included the 2018 Article IV staff report, identify the continued need for intensive CD. However, over the medium term, some rebalancing and streamlining is being considered reflecting the evolution of the Fund's CD engagement.

Background

1. CD has been strategically important to economic reforms and rebuilding economic institutions in Myanmar. The IMF's Independent Evaluation Office, in its report on capacity development, has highlighted the positive impact that CD has had on Myanmar.[1] Given large and broad CD needs, and multiple development partner engagement, a strong link between surveillance and CD has been established. Myanmar receives significant amounts of CD from the IMF. CD is being delivered by long-term resident advisors, by regional advisors from CDOT, by STI and OAP, and by IMF HQ-based missions, and short-term experts. CD providers work closely with each other and coordinate with other development partners to avoid duplication and maximize synergies including through annual COFTAM (Committee for the Coordination of Financial Sector Technical Assistance to Myanmar) and periodic MMSCG (Macroeconomic Management Sector Coordination Group) cochaired by the IMF.

2. CD has been aligned to the authorities' development plans as well as the IMF's surveillance priorities.[2] Development needs, as highlighted by the authorities' development plans, are large. These needs are currently being met with CD from the IMF and other development partners. Building fiscal and monetary institutions, strengthening the legal framework, improving macroeconomic statistics and increasing staff capacity with the aim to strengthening policy making while improving transparency, and overall governance and reducing corruption vulnerabilities remain broad objectives of setting CD and TA objectives. While substantial progress continues to be made in each of these areas, much more remains to be done to develop capacity and improve the quality of institutions.

TA Delivery to Low Income Developing Countries
(Millions of U.S. dollars, FY2019)



Source: IMF staff calculations.

[1] https://ieo.imf.org/en/our-work/evaluation-reports/Completed/2018-0403-the-imf-and-fragile-states.

[2] This was highlighted in the 2018 Article IV staff report which integrated CD with surveillance priorities and with the goals set in the authorities' long-term development plans.

Reflecting this and keeping in mind that some large projects are winding down, some reprioritization is being considered to optimize the IMF's CD resources to respond to the needs from a rapidly changing economic environment.

Fiscal Sector

Preliminary findings from the second Public Expenditure and Financial Accountability Assessment PEFA, based on the more stringent new 2016 framework, indicate substantial improvements including in budget reliability, reporting, transparency and predictability. However, Myanmar's tax revenue-to-GDP ratio remains low by regional and international standards. With a projected decline in natural resource revenues, a comprehensive medium-term revenue mobilization strategy aligning revenue goals with SDG expenditure needs and having a clear PPP framework as well as robust PFM system are essential in the aspiration to strengthen fiscal governance. Greater clarity and transparency of extractives revenues and tax expenditures are also key to strengthening governance.

5. Myanmar's transformational tax system reform journey is now in its second phase. With the help of intensive TA from the IMF, the reform journey is currently focusing on consolidating the reforms introduced in the first phase and introducing more features of a modern tax system. IMF CD continues in tax administration, tax policy development, and legislation drafting. Two key achievements in 2018–19 were the procurement of a new integrated tax administration system (ITAS) to be deployed over the next three years and the enactment of the Tax Administration Law (TAL)—both longstanding projects. In addition, IMF TA has helped IRD to begin transitioning towards revenue mobilizing reforms: expanding the taxpayer population covered by the self-assessment system, centralizing tax return and payment processing for the large and medium taxpayer offices, enhanced taxpayer services through a Technical Review Committee that provides greater clarity to interpretation and administration of the tax laws, and establishing a Public Education and Communications Unit that acts as a gatekeeper for the IRD website and public statements. A Risk and Intelligence Unit was also established to strengthen risk management capability. Staffing and competencies in the Information Technology Directorate have increased to reflect the additional workloads associated with the ITAS project and broader e-services.

6. ITAS and TAL implementation are the highest reform priorities scheduled for 2019–20. Modernizing the tax system in Myanmar is critical for improving efficiency and equity as well as securing revenues for achieving development goals. Following the adoption of TAL in July 2019, the next step should include reforming the income tax and adopting a new income tax law (ITL) as the sole legal instrument governing the income tax in line with previous IMF recommendations. Continuing work to centralize processing and taxpayer services and continuing the SAS expansion, along with trained dedicated staff, will be necessary to support ITAS and TAL implementation. Throughout 2019–20, IRD faces a range of competing demands on time, focus, and resources. Managing operations alongside reform activity will at times be complicated. During this transition, operations must continue, services to taxpayers must not decline, and revenues must be protected through enforcement and other compliance improvement responses. Stronger governance processes are needed to manage the changes and competing priorities.

7. CD in the PFM programs has progressed on improving budget planning and managing fiscal risks while strengthening budget execution. TA continues towards strengthening both planning and budgeting, with the broader aim of improving budget credibility and expenditure efficiency. Complementing this, TA for strengthening institutional, legal, budgetary and reporting frameworks to better manage fiscal costs and risks from PPPs has been provided. PPPs are expected to grow significantly in the coming years, however, the framework for managing these efficiently is yet to fully develop. In line with FAD recommendations, the authorities have updated the standardized PPP contracts. In addition, the first prioritized public investment program, Project Bank, has been launched with support from the World Bank. The Project Bank will help identify and screen infrastructure projects and account for the fiscal liabilities from PPPs. Further enhancing the fiscal risk management, including those from SEEs, should be a priority going forward. Strengthening treasury management, including progress in implementing the medium-term treasury reforms, continues. Progress has been made on accounting, fiscal reporting, cash and debt management. Recent milestones include: establishing the workplan for the newly created Treasury Policy and Quality Promotion Division and drafting instructions and new templates for SEEs reporting to Treasury. In addition, the TA on automating financial reporting has made considerable progress. Development partners are expected to take a more prominent role on some of the PFM related projects (such as FMIS) going forward.

8. The first phase of the automated financial information reporting system for the Treasury (FIRST) has been developed as an initial step towards an eventual FMIS. FIRST provides flexible, automated data entry and automated consolidation of Union level financial reporting. FIRST also includes a cash forecasting reporting and reconciliation functionality (with government bank account information). FIRST became operational at the Treasury level in July 2019 and plans for FIRST 2.0 are being discussed. FIRST 2.0 will integrate treasury and budget reporting and possibly extend financial reporting and accounting functionality to the spending unit level. For that to succeed, a key priority is to develop a unified chart of accounts (COA). Regional PFM and Treasury Advisors have established a COA working group and a COA review with relevant stakeholder has been agreed upon with the aim to enhance both administrative and economic classification to improve logical consistencies and support the automation process.

9. While there has been progress with modernization in the MCD, an extensive reform agenda remains. Notable progress has been made in computerization and, with IMF support, in developing the Export/Import Manual and new training and human resource policies. However, overall progress remains slow and TA needs remain significant. Key areas for future reform the medium term include enhancing the strategic management of reform initiatives, strengthening operational risk management, building the intelligence, post clearance audit, and investigation functions, strengthening enforcement, and increasing cooperation with the IRD. In addition, the law enforcement work stream requires a review and update of its methodology. In some of these areas, developing partners and donors taking the lead in CD delivery will help meet some of these CD requests.

10. Important issues in the legal and policy framework in the extractive industries (EI) still need to be addressed. A new draft Petroleum Law is being debated in parliament. In addition, drafting of a dedicated extractive industries (EI) chapter of the new Income Tax Law (ITL) is underway to address gaps and ambiguities in the application of income tax to the petroleum and mining sectors. TA on the EI fiscal regime, in particular on the reform of the model production sharing contract (PSC) ahead of the planned licensing round, is ongoing. With the authorities seeking to attract new investment in the sector, it is important that the government takes the necessary steps to make sure that the fiscal regime is sufficiently attractive and legislative uncertainty is addressed.

Monetary and Financial Sector

The central bank is upgrading the monetary policy framework, which would better support price and external stability. Progress has been made in bank supervision and regulation, while a *comprehensive financial sector reform strategy is required to safeguard financial stability.*

11. Priority for the central bank should be attributed to more firmly and credibly establishing its monetary targeting framework. TA will continue to support the Central Bank of Myanmar (CBM) to strengthen its reserve money targeting regime for upgrading: (i) its monetary policy toolkits by implementing recommendations from the IMF, and (ii) its liquidity monitoring. In addition, TA is also envisaged for helping CBM improve the operational procedures of monetary policy toolkits, publish the interbank market reference rates and upgrade CBM's market intelligence capacity. Over time, assistance in helping the CBM set up a monetary policy committee and a technical working group to support the committee should be considered. Further deepening of the interbank market and developing a FX intervention strategy are medium-term priorities. CD to design amendments to the FX management law would help address regulatory gaps. These amendments would also facilitate development of interbank FX markets and hedging instruments through a gradual recalibration of net FX open positions.

12. Strengthening bank supervision and regulatory framework is ongoing with CD from the IMF and the World Bank. Progress has been made in strengthening on-and-offsite bank examinations and introducing risk-based supervision with Fund TA, compliance and enforcement including judicious use of penalties remain at early stages. Developing a comprehensive financial sector reform strategy is urgently required to safeguard financial stability and the IMF and the World are closely engaged to assist in this endeavor. The key elements would include effective mechanisms to ascertain banks' true health; enable loss recognition and provisioning, orderly deleveraging, and recapitalization; and putting in place effective resolution mechanisms that limit spillovers while protecting small depositors. The World Bank is taking the lead on the regulatory and resolution framework while the IMF will continue strengthening bank supervision and financial stability analysis. Traction to date on bank resolution has been limited due to evolving circumstances in the sector and capacity constraints.

13. CBM has committed to complying with International Financial Reporting Standards (IFRS) for its 2021 yearend. It has taken steps to adopt the Institute of Internal Auditors' International Professional Practices Framework for its Internal Audit function. TA to help fully transition to IFRS by this deadline as well as adopt risk-based audit procedures continues. Strengthening risk-based supervision supported by IMF TA continues at the CBM. The commitment to convert to risk-based auditing needs to be reinforced and should be incorporated into CBM's workplans.

14. The issuance of the 2019 regulations is expected to help strengthen credit risk management at banks. From a governance perspective, the 2017 regulation on large exposure limits now provides safeguards against excess financial exposures. In March 2019, CBM issued all pending regulations including on contentious corporate governance aspects. The issuance of these regulations is expected to help strengthen credit risk management at banks, however, the supervisory authorities require further capacity building to operationalize these.[3]

Anti-Money Laundering/Countering Financing of Terrorism (AML/CFT)

In 2014 Myanmar enacted a new AML Law and a Counter Terrorism Law that contains CFT provisions and AML/CFT Rules were issued in 2015. The National Risk Assessment (NRA), completed in 2017, provided valuable input into the National Strategy which was formally adopted in 2019. However, as identified by the most recent APG evaluation, much remains to be accomplished to strengthen Myanmar's legal and regulatory AML/CFT framework.

15. Myanmar formally adopted the National Strategy in 2019. Since completing the NRA report in 2017 the National Risk Assessment Committee has taken several measures to disseminate its findings. An executive summary was prepared for senior officials and several seminars were conducted to discuss findings with a wide range of stakeholders. The NRA report proved to be a useful resource during Myanmar's 2017/18 mutual evaluation (ME) as its key findings were shared with assessors. The NRA report and the findings of the ME were key inputs for the National Strategy which was completed in May 2019 and formally adopted by Cabinet in May 2019.

16. The most recent APG evaluation has identified weak levels of effectiveness across Myanmar's entire AML/CFT regime. It is unlikely that the authorities will be able to demonstrate that the deficiencies identified in the mutual evaluation report have been corrected by the end of the observation period (October 2019). There is high risk that Myanmar will be grey-listed under the FATF's International Cooperation Review Group (ICRG) process in February 2020. Much of the shortcoming highlighted by the APG focusses on effectiveness which will require high levels of political commitment. A major concern in the context of TA from Fund is the failure to update and use most of the supervisory tools developed with the help of IMF. In addition, co-operation between Banking Regulation and Financial Supervision departments in the CBM continues to be sub-optimal. Under an on-going CD project, LEG has provided extensive legislative drafting recommendations to

[3] CBM's Directives on "Fit & Proper," "Directors," "External Auditors," "Related Parties," and "Substantial Interest." were issued in March 2019 covering corporate governance and financial reporting.

assist that authorities to address these deficiencies. The Fund will continue to assist the CBM to improve the effectiveness of its AML/CFT supervision.

Data and Training

Noticeable improvements in government finance statistics (GFS) and external sector statistics (ESS) have resulted from extensive technical assistance (TA) and training delivered by the IMF, notably through regional advisors. However, improving coverage, quality, and timeliness, and ensuring better coordination between collecting and compiling agencies are imperative to assist policy formulation for analysis and decision-making.

17. Substantial progress has been made in improving macroeconomic statistics, but more remains to be done to improve the quality and ensure timely dissemination of data. Major progress has been made in improving the quality of CPI, ESS and GFS data. The revamped National Summary Data Page (NSDP) was launched in April 2019 implementing the e-GDDS.[4] Establishing banking system data collection for the balance of payments and administrative data collection for direct investments marked major recent achievements in ESS, but weak inter-agency cooperation remains major impediment to further progress. Recent TA has focused on the national accounts to assist with developing/updating measures of quarterly GDP (in line with rebased estimates of annual GDP by production and expenditure in FY2015/16 prices) and on price statistics with the objective of enhancing quality and developing sound GDP deflators. Coverage of FSIs and the lack of consistency with MFS data remain to be resolved. Improving monetary statistics (e.g., data on government financing and financial data of nonbank financial institutions) is expected to continue. As the CBM's capacity of supervision improves, more attention needs to be given to balance sheet data to aid its analysis of macro-financial linkages and consolidated supervision.

18. Training of officials is ongoing via customized courses, specialized workshops and training in methodologies used in surveillance. Recent in-country training provided by the IMF covers topics ranging from assessing the fiscal costs and risks from PPPs (Fiscal Risk Assessment Model), treasury management, budget analysis, government accounting and reporting, to monetary and exchange rate operations, statistical methodologies (including ESS and GFS), and financial programming and debt sustainability analysis. In addition, officials receive opportunities to join regional training events outside Myanmar, including those led by STI, CDOT, and OAP, which raise awareness of contemporary challenges facing developing and emerging market economies and foster peer-to-peer learning and exchanges. Recent offerings have focused on macro-forecasting, macroeconomic diagnostics, and macro-financial analysis, with an aim to building agencies' capacity to strengthen macroeconomic analysis and policy coordination over the longer term. To ensure a more systematic approach to training, the Ministry of Planning, Finance, and Industry (MPFI) has

[4] The NSDP is hosted by the Central Statistical Organization of the Ministry of Planning and Finance on its website, utilizing the Statistical Data and Metadata Exchange (SDMX) standard. The NSDP also contains links to statistics published by the Central Bank of Myanmar and the Ministry of Planning and Finance. Myanmar's NSDP is available via https://www.csostat.gov.mm/NSDP.htm.

established the PFM Academy with training courses expected to start in FY2019/20 with support from development partners, including the IMF. An inter-agency core macroeconomic group (led by CDOT) continues to meet regularly to develop, update, and operationalize a macroeconomic framework.

Rebalancing CD priorities

A majority of the CD from the IMF in Myanmar is being funded from external sources. Most missions are peripatetic and support medium-term thematic projects.[5] *A reprioritization and streamlining of CD was undertaken to reduce the resource allocation in FY2020. While medium-term CD demands remain strong, given immediate needs and absorptive capacity constraints, CD is expected to be further rationalized and reprioritized. There is further scope for streamlining as projects mature and for maximizing synergies with other development partners.*

19. Rationalization of CD was undertaken in the FY2018/19 RAP and would continue over the medium term. CD in several fiscal areas, such as customs reforms, may be reallocated given absorptive capacity and changes in the general Civil Service regulations. The tax administration project in IRD is maturing and will be less resource intensive going forward. Instead, CD in several areas including prudential regulations, supervisory capacity, training staff to follow up on the findings of the full-scope bank examinations, recovery and resolution, amongst others is needed. However, progress in this area would depend on the ownership of the reforms and the establishment of dedicated team to work on bank restructuring issues. Reprioritization, to include more of these immediate needs, and at the same time streamlining, reflecting capacity constraints of limited CD resources, is being considered and is contingent on the traction with the authorities.

[5] Peripatetic missions are a series of short-term missions within a longer life cycle of a medium-term CD project.

Table 1. Myanmar: MSDP and Capacity Development

Pillar	Goal	Strategy	Action Plan	Potential Programmes/Projects/Initiatives	CD Outcome
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.1 Effectively manage the exchange rate and balance of payments	2.1.1 Allow the kyat to float more freely in response to market supply and demand		TA for FX auction operation to clear the markets and provide a market-clearing exchange rate.
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.1 Effectively manage the exchange rate and balance of payments	2.1.2 Ensure greater exchange rate flexibility as the CBM moves from a foreign exchange auction to an interbank transaction-based mechanism for setting the reference rate	To develop the capacity of the authorities to implement FX operations efficiently and in a manner consistent with their chosen monetary policy FX regime	Develop interbank foreign exchange market and progressively attach a greater weight to interbank transactions in setting the reference rate
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.1 Effectively manage the exchange rate and balance of payments	2.1.3 Stabilize high volatility of the exchange rate		Maintain an adequate level of foreign exchange reserves and exchange rate consistent with medium term funtamentals
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.1 Effectively manage the exchange rate and balance of payments	2.1.4 Develop an exchange rate intervention mechanism		TA for clear FX intervention strategy that is consistent with the chosen FX regime and well-understood by markets and the public
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.1 Effectively manage the exchange rate and balance of payments	2.1.5 Stabilize inflation both from a monetary and fiscal policy perspective	Reduce CBM financing of the budget deficit and develop domestic debt market	Strengthen monetary policy tool kit, improvie liquidty mangement, reduce CBM financing of the budget deficit, and develop domestic debt market. CBM can better control inflation by utilizing the function of financial markets.
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.1 Effectively manage the exchange rate and balance of payments	2.1.8 Develop the currency swap auction market through which foreign and domestic banks are more comfortable in conducting foreign currency interbank transactions, minimizing foreign exchange risk and uncertainty	To develop the capacity of the authorities to implement FX operations efficiently and in a manner consistent with their chosen monetary policy FX regime	TA to implement the policy regarding the provision of FX liquidity outside of the spot FX market intervention while adequately managing the associated risks.
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.2 Reduce inflation and maintain monetary stability	2.2.1 Continue monetary policy prudence with a view to stabilizing inflation and ensuring balance between economic growth and stability	Gradually move to a reserve money targeting framework with a flexible exchange rate regime	
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.2 Reduce inflation and maintain monetary stability	2.2.2 Continue conducting deposit auctions	Enforce and maintain reserve requirement and liquidity monitoring/forecasting.	The CBM can better control inflation and financial conditions.
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.2 Reduce inflation and maintain monetary stability	2.2.3 Continue enforcing reserve requirement instructions on banks with flexibility to account for seasonality	Upgrade monetary operations	
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.2 Reduce inflation and maintain monetary stability	2.2.4 Strengthen treasury securities auctions and expand public understanding of bonds, bills and similar instruments	Further strengthening the primary government securities market and develop secondary market. Development of yield curve.	
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.2 Reduce inflation and maintain monetary stability	2.2.6 Develop the interbank money market, and ultimately liberalize bank interest rates based on borrower risk profiles	Improve monetary operations and market development. Utilize the interbank transaction data collected by the CBM so that it is useful for market participants, with the aim of publishing key interest rates.	Interbank money market becomes more transparent and easier to use for market participants, including the CBM, improving banks' capacity to manage their liquidity.

Table 1. Myanmar: MSDP and Capacity Development (continued)

Pillar	Goal	Strategy	Action Plan	Potential Programmes/Projects/Initiatives	CD Outcome
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.2 Reduce inflation and maintain monetary stability	2.2.7 Develop the REPO market through which the CBM can absorb excess liquidity from the market through open market operations, including possibly REPO auctions	Develop and implement roadmap to liberalize interest rates commensurate with the CBM's capacity to supervise financial system as well as calibrate macro-financial developments and implement market-based operations	Interest rates become more market-determined, improving the scope and effectiveness of monetary operations. Possible introduction of repos.
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.2 Reduce inflation and maintain monetary stability	2.2.9 Strengthen BOP shock absorptive capacity and build up foreign exchange reserves to support a more favourable BOP position	Strengthen external sector statistics. TA and training to improve data timeliness, quality, and coverage and macroeconomic analysis through TA aimed at building a comprehensive macroeconomic framework	Improved quality of BOP and IIP data, in terms of : (1) improved coverage, particularly for direct investment, remittances, and external debt; (2) consistency with MFS
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.3 Increase domestic revenue mobilisation through a fair, efficient and transparent taxation system	2.3.1 Reform the structure and governance mechanisms of IRD and other relevant entities, and establish functionally based departments organized to best administer the tax system for different groups of taxpayers	Covered in IRD Reform Journey	Support activities in the Operations Management, Design and Monitoring, and Tax Reform directorates.
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.3 Increase domestic revenue mobilisation through a fair, efficient and transparent taxation system	2.3.3 Implement new information technology systems for registration, processing, accounting, and case work		ICT implementation
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.3 Increase domestic revenue mobilisation through a fair, efficient and transparent taxation system	2.3.4 Develop modern tax laws, including a new Tax Administration Law, a new Income Tax Law and a new VAT Law		Development of new model production sharing contract (PSC) for petroleum. Income Tax Law including a specialized chapter on extractive industries.
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.3 Increase domestic revenue mobilisation through a fair, efficient and transparent taxation system	2.3.5 Introduce anti-corruption and tax evasion counter- measures to protect the integrity and reputation of the tax system, including expanding the focus of internal audit and establishing an Internal Affairs Unit		Support activities in the Operations Management, Design and Monitoring, and Tax Reform directorates.
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.3 Increase domestic revenue mobilisation through a fair, efficient and transparent taxation system	2.3.6 Expand the implementation of a Self-Assessment System to Medium Taxpayer Offices.		
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.3 Increase domestic revenue mobilisation through a fair, efficient and transparent taxation system	2.3.7 Implement a risk-based approach to tax administration using a Compliance Improvement Strategy to guide the administration of taxpayer services and enforcement strategies.		
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.3 Increase domestic revenue mobilisation through a fair, efficient and transparent taxation system	2.3.8 Streamline tax processes and procedures to reflect good international practice and maximise opportunities provided by modern technology		
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.3 Increase domestic revenue mobilisation through a fair, efficient and transparent taxation system	2.3.9 Develop IRD staff capabilities by providing clear expectations of staff roles and responsibilities, relevant training, modern work practices including effective performance management		

Table 1. Myanmar: MSDP and Capacity Development (concluded)

Pillar	Goal	Strategy	Action Plan	Potential Programmes/Projects/Initiatives	CD Outcome
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.4 Strengthen public financial management to support stability and the efficient allocation of public resources	2.4.1 Significantly increase overall budget transparency, including the continued publication of Citizen Budgets, presentation of tax expenditures in annual budgets and other measures	Support through TA and training on strengthening public finanicial management (PFM), supporting improved treasury management and modernization of financial management systems, and improving government finance statistics (GFS) and public sector debt statistics (PSDS)	A treasury reform roadmap 2018-2022 has been developed. Phase I of Financial Information Reporting System for the Treasury (FIRST) has gone live. Time lag of budget execution reports and financial reports shortened. Format of fiscal reports more aligned with international standards. Developing capacity for medium-term FMIS development. Budget execution and controls are strengthened and have largely achieved. Comprehensiveness, frequency, and quality of fiscal reports has been enhanced.
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.4 Strengthen public financial management to support stability and the efficient allocation of public resources	2.4.4 Strengthen scrutiny and oversight of budget proposals and cut unnecessary expenditures	Integrate recurrent and capital budgets, implement medium-term capital program (MTCP) and the mechanism for central review of project proposals and appraisals, develop baseline expenditure estimates and focus budget scrutiny on new initiativesve and solicit explanatory information in the budget to facilitate budget scrutiny and analysis.	Capital projects are better programmed with medium-term fiscal constrains and policy guidance.
1. Peace & Stability	2 Economic Stability & Strengthened Macroeconomic Management	2.5 Enhancing the efficiency and competitiveness of State Economic Enterprises	2.5.4 Standardize financial reporting structures across SEEs and release financial data on SEEs to the public	Supporting Improved Treasury Management and Modernization of Financial Management Systems	New templates of SEEs' financial reports would support the consolidation of public accounts. Comprehensiveness, frequency, and quality of fiscal reports is enhanced.
2. Prosperity & Partnership	3 Job Creation & Private Sector Led Growth	3.5 Increase broad-based access to financial services and strengthen the financial system overall	3.5.1 Strengthen the capacity of domestic financial institutions	Develop and strengthen banking regulations and prudential norms	Develop/Strengthen banking regulations and prudential norms and more efficient use of supervisory resources to better oversee key risks in their banking systems
2. Prosperity & Partnership	3 Job Creation & Private Sector Led Growth	3.5 Increase broad-based access to financial services and strengthen the financial system overall	3.5.4 Continue liberalisation of the banking sector including through plans and regulations for the Financial Institutions Law (FIL) and Foreign Exchange Management Law (FEML)		Modernize FEML.
2. Prosperity & Partnership	3 Job Creation & Private Sector Led Growth	3.5 Increase broad-based access to financial services and strengthen the financial system overall	3.5.8 Introduce measures that enable Myanmar banks to ensure full compliance with applicable prudential standards		Develop/Strengthen banking regulations and prudential norms and more efficinet use of supervisory resources to better oversee key risks in their banking systems
2. Prosperity & Partnership	3 Job Creation & Private Sector Led Growth	3.5 Increase broad-based access to financial services and strengthen the financial system overall	3.5.12 Strengthen the CBM's supervisory and regulatory capacity, including through the development of a comprehensive banking sector strategy with clear responsibilities for the CBM		
2. Prosperity & Partnership	3 Job Creation & Private Sector Led Growth	3.5 Increase broad-based access to financial services and strengthen the financial system overall	3.5.14 Increase financial transparency, including by enforcing existing regulations on financial reporting and the introduction of additional transparency-related regulations for financial institutions	Strengthen the CBM's institutional capacity to conduct financial management operations and ensure the integrity of its financial reporting	The CBM has established the basis of a modern accounting framework

INTERNATIONAL MONETARY FUND

COM COMMUNICATIONS DEPARTMENT

Appendix I. Draft Press Release

Press Release No. 20/xx
FOR IMMEDIATE RELEASE

International Monetary Fund
700 19th Street, NW
Washington, D. C. 20431 USA

IMF Executive Board Concludes 2019 Article IV Consultation with Myanmar

On February 28, 2020 the Executive Board of the International Monetary Fund (IMF) concluded the Article IV consultation with Myanmar.[1]

Economic activity in FY2018/19 remained below levels seen in the last decade. Growth is expected to be subdued at 6.5 percent in FY2018/19, up slightly from 6.4 percent in FY2017/18 on account of a modest fiscal stimulus and one-off increase in gas exports. Domestic demand remains weak reflecting slowing credit growth, a correction in real estate prices and declining investments. Subdued economic activity has narrowed the current account deficit as imports fell while exports, especially textiles, held up despite global headwinds. The narrower deficit offset weaker FDI and other inflows allowing reserves and the kyat to stabilize. Headline inflation stood at 8.6 percent at end-September due to one -off factors such as higher electricity tariffs and food and fuel prices.

Medium-term growth is likely to remain subdued. Growth in FY2019/20 is expected to moderate slightly to 6.4 percent as continued uncertainty weighs on investor sentiment in the runup to the November 2020 elections. This slowdown is despite the fiscal stimulus envisaged in the FY2019/20 budget, which is appropriate given cyclical weakness. Starting FY2020/21,

[1]Under Article IV of the IMF's Articles of Agreement, the IMF holds bilateral discussions with members, usually every year. A staff team visits the country, collects economic and financial information, and discusses with officials the country's economic developments and policies. On return to headquarters, the staff prepares a report, which forms the basis for discussion by the Executive Board.

Washington, D.C. 20431 • Telephone 202-623-7100 • Fax 202-623-6772 • www.imf.org

bank deleveraging is likely to slow credit and GDP growth as legacy problems are addressed. Inflation is expected to fall to 6–7 percent range in the medium term as recent one-off factors abate.

Risks to the outlook have shifted further to the downside. On the domestic front, growth could underperform if fiscal spending does not pick up. Rising NPLs and undercapitalization in some private banks could precipitate systemwide distress with large macro-financial spillovers. Renewed conflict and limited progress on the ongoing refugee crisis would continue to limit donor financing and dampen investor sentiment. On the external front, risks include the impact of global trade tensions, higher crude oil prices, a slowdown in China, and natural disasters. An upside risk is that growth is boosted by the planned scaling up of infrastructure and human capital spending and full implementation of the Myanmar Sustainable Development Plan. However, these projects need to be carefully managed to contain fiscal risks.

Executive Board Assessment[2]

< >

[2] At the conclusion of the discussion, the Managing Director, as Chairman of the Board, summarizes the views of Executive Directors, and this summary is transmitted to the country's authorities. An explanation of any qualifiers used in summings up can be found here: http://www.imf.org/external/np/sec/misc/qualifiers.htm.

Sources: Data provided by the Myanmar authorities; and IMF staff estimates and projections.

1/ From 2018/19 onwards the fiscal year was changed to an October 1 to September 30 format. This table uses the new fiscal year definition for both historical data and projections.

2/ Real GDP series is rebased to 2015/16 prices by the authorities.

3/ Union and state/region governments and state economic enterprises. Revised to reflect Government Finance Statistics Manual 2014 classification.

4/ The balance of payments data has been revised according to the BPM6 methodology.

5/ FDI from 2017/18 onwards reflects improved forex transaction data collection, which has caused a break in the data series.
