

EXECUTIVE
BOARD
MEETING

EBS/20/123
Supplement 1

July 16, 2020

To: Members of the Executive Board
From: The Secretary
Subject: **Chad—Request for Disbursement Under the Rapid Credit Facility and Cancellation of The Extended Credit Facility—Debt Sustainability Analysis**

Board Action: Executive Directors' **consideration** (Formal)
Prepared By: The staffs of the Fund and the International Development Association
Tentative Board Date: **Wednesday, July 22, 2020**
Publication: Yes*
Questions: Mr. Gemayel, AFR (ext. 39330)
Mr. Abdelrazek, AFR (ext. 39726)
Document Transmittal in the Absence of an Objection and in accordance with Board policy: After Board Consideration—African Development Bank, Islamic Development Bank, Organisation for Economic Cooperation and Development, World Trade Organization

*The authorities have indicated that they consent to the Fund's publication of this paper.

CHAD

July 15, 2020

REQUEST FOR DISBURSEMENT UNDER THE RAPID CREDIT FACILITY AND CANCELLATION OF THE EXTENDED CREDIT FACILITY ARRANGEMENT—DEBT SUSTAINABILITY ANALYSIS

Approved By

David Owen, Gavin Gray
and Marcello Estevão (IDA)

Prepared by the Staffs of the International Monetary Fund (IMF) and the International Development Association (IDA)

Chad Joint Bank-Fund Debt Sustainability Analysis ¹	
Risk of external debt distress	<i>High</i> ²
Overall risk of debt distress	<i>High</i>
Granularity in the risk rating	<i>Sustainable</i>
Application of judgement	<i>No</i>
Macroeconomic projections	<i>The previous DSA in April 2020 reflected reduced growth and significant deterioration in fiscal and external balances. The current DSA reflects a further downward revision to growth of 0.7 percentage point in 2020, with a deterioration of 2.3 percentage points in fiscal and 0.9 percentage points in external balances. The shock is still expected to be temporary and a gradual recovery is forecast in 2021.</i>
Financing strategy	<i>Since the last DSA, Chad has identified significant donor support for 2020 and oil revenue has surprised on the upside. The authorities expect to pursue a follow-on IMF arrangement later this year.</i>
Realism tools flagged	<i>Large unexpected increase in public debt in the last 5 years.</i>
Mechanical risk rating under the external DSA	<i>High</i>
Mechanical risk rating under the public DSA	<i>High</i>

¹ The debt coverage has expanded since the last DSA (April 2020) to include domestic arrears in the domestic debt stock (5.8 percent of GDP). Previously domestic arrears only appeared in the contingent risk analysis. Accordingly, “other elements of general government” in the contingent liability tailored test has been reduced to zero.

² With a score of 2.47, Chad’s composite indicator, which is based on the October 2019 WEO and the 2018 CPIA, signals a weak debt-carrying capacity.

This debt sustainability analysis (DSA) updates the joint World Bank-IMF analysis of April 2020 to reflect the most recent outlook. Debt remains sustainable under the baseline forecast, but uncertainty remains high. For instance, the outlook includes large unfinanced fiscal and external financing gaps for several years. Historically the authorities have been able to service debt at baseline forecast levels, and program performance under the ECF suggests a strong commitment to obligations. In sum, the debt sustainability picture has not appreciably changed since April. Chad's risks of external and overall debt distress remain high.

The macroeconomic outlook has deteriorated with the pandemic's more pronounced presence in Chad. In 2020, growth is modestly weaker, but Q1 oil revenues—which are based on 2019 oil exports—have surprised to the upside and donor support has crystallized. In particular, the World Bank i) disbursed (US\$ 16.95 million) to prevent, detect, and respond to health threat posed by COVID-19; ii) is preparing a COVID-19 education project; and iii) is preparing a Development Policy Operation in response to the short and long term challenges faced by the country. In the medium term, oil price forecasts have changed very little since the last DSA. The debt sustainability analysis is based on projected continued fiscal prudence and an increase in non-oil revenues after the pandemic crisis abates. The RCF request comprises the only substantial change on the external debt side.

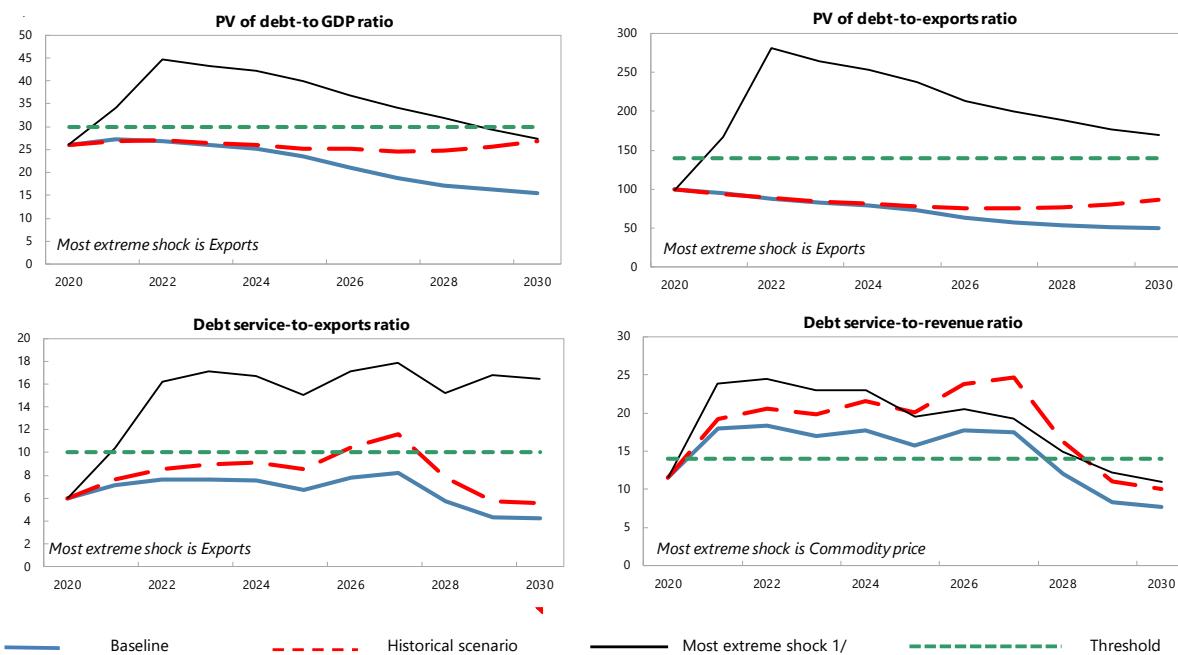

Chad requested treatment under the Debt Service Suspension Initiative (DSSI) from all creditors, public and private, and intends to adhere to the commitments noted in the LOI. The DSA assumes all official bilateral creditors from the G-20 and Paris Club, plus Kuwait and the UAE, will provide debt reprofiling in 2020, totaling CFAF 7.5 billion. The authorities have begun clearing arrears in accordance with the government clearance strategy adopted in January. Clearance in 2020 may be financed through a CFAF 85 billion, 8-year loan arrangement with banks and (ii) a series of 3- to 5-year treasury bonds amounting to CFAF 25 billion. Thereafter the DSA assumes cash payment of arrears. Finally, this assessment assumes debt relief from the IMF of CFAF 8.2 billion across 2020 and 2021 under the Catastrophe Containment window of the CCRT through April 2022 (subject to the availability of CCRT resources for the next 18 months).

Under the baseline, three of the external debt sustainability indicators stay below their respective thresholds, but the debt-to-revenue ratio breaches its threshold from 2021 through 2027. Under stress scenarios—in particular the customized oil price shock and the exports shock—indicators approach levels seen during Chad's last episode of debt distress. Total public debt vulnerabilities are elevated, and under the baseline the pandemic pushes the present value (PV) of public debt-to-GDP ratio above its benchmark from 2020 to 2024.

Following the restructuring in 2018, the new Glencore debt contract contingencies have allowed lower debt service to cushion low oil prices and should provide additional cushion through 2023 under the baseline, with additional cushion capacity remaining.¹ However, the contingency mechanisms could become exhausted in 2021 under the conditions of the customized oil price shock stress test, which would likely lead to a sharp rise in Chad's debt service-to-revenue ratio, potentially pushing the country back in a situation of debt distress.

¹ Under the Glencore debt restructuring agreement, for the period 2021-2026 mandatory amortization could be deferred up to US\$75 million mainly if (i) government oil export receipts are lower than Glencore debt service, and (ii) oil prices are lower than US\$42 per barrel.

Figure 1. Chad: Indicators of Public and Publicly Guaranteed External Debt under Alternative Scenarios, 2020–2030

Customization of Default Settings		
	Size	Interactions
Tailored Tests		
Combined CLs	Yes	
Natural Disasters	n.a.	n.a.
Commodity Prices ^{2/}	No	No
Market Financing	n.a.	n.a.

Note: "Yes" indicates any change to the size or interactions of the default settings for the stress tests.
"n.a." indicates that the stress test does not apply.

Borrowing Assumptions for Stress Tests*		Default	User defined
Shares of marginal debt			
External PPG MLT debt		100%	
Terms of marginal debt			
Avg. nominal interest rate on new borrowing in USD	1.0%	1.0%	
USD Discount rate	5.0%	5.0%	
Avg. maturity (incl. grace period)	17	20	
Avg. grace period	8	6	

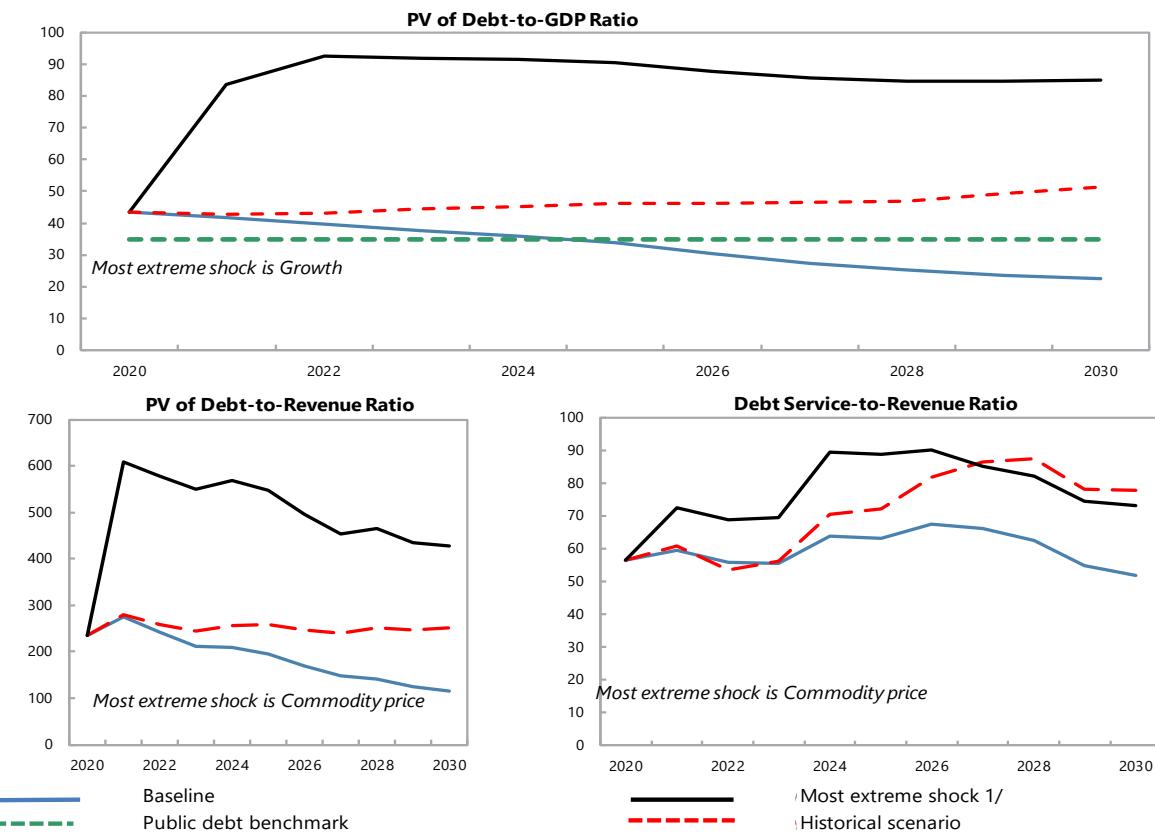

* Note: All the additional financing needs generated by the shocks under the stress tests are assumed to be covered by PPG external MLT debt in the external DSA. Default terms of marginal debt are based on baseline 10-year projections.

Sources: Country authorities; and staff estimates and projections.

1/ The most extreme stress test is the test that yields the highest ratio in or before 2030. Stress tests with one-off breaches are also presented (if any), while these one-off breaches are deemed away for mechanical signals. When a stress test with a one-off breach happens to be the most extreme shock even after disregarding the one-off breach, only that stress test (with a one-off breach) would be presented.

2/ The magnitude of shocks used for the commodity price shock stress test are based on the commodity prices outlook prepared by the IMF research department.

The tailored commodity price stress test presented here does not account for the contingency mechanisms in the Glencore debt as Text Figure 1 does.

Figure 2. Chad: Indicators of Public Debt Under Alternative Scenarios, 2020–2030

Borrowing Assumptions for Stress Tests*	Default	User defined
Shares of marginal debt		
External PPG medium and long-term	35%	65%
Domestic medium and long-term	10%	5%
Domestic short-term	109%	30%
Terms of marginal debt		
External MLT debt		
Avg. nominal interest rate on new borrowing in USD	1.0%	1.0%
Avg. maturity (incl. grace period)	17	20
Avg. grace period	8	6
Domestic MLT debt		
Avg. real interest rate on new borrowing	9.3%	5.0%
Avg. maturity (incl. grace period)	1	1
Avg. grace period	0	0
Domestic short-term debt		
Avg. real interest rate	0%	2.0%

* Note: The public DSA allows for domestic financing to cover the additional financing needs generated by the shocks under the stress tests in the public DSA. Default terms of marginal debt are based on baseline 10-year projections.

Sources: Country authorities; and staff estimates and projections.

1/ The most extreme stress test is the test that yields the highest ratio in or before 2030. The stress test with a one-off breach is also presented (if any), while the one-off breach is deemed away for mechanical signals. When a stress test with a one-off breach happens to be the most extreme shock even after disregarding the one-off breach, only that stress test (with a one-off breach) would be presented.
